

Tremont City Barrel Fill Site Stakeholder Factsheet

You are invited

EPA invites you to attend a public meeting at Northwestern High School to listen about the status of the site and the upcoming work, June 7, from 6-7:30 p.m. EPA Representatives will be available to talk about the project and take your questions. See the “Upcoming Meeting & Updates” box at the bottom of this page for details.

Cleanup Phase Begins at Tremont City Barrel Fill Site

Tremont City Barrel Fill Superfund Site
German Township, Ohio

June 2023

Potentially Responsible Parties under the oversight of the U.S. Environmental Protection Agency, will begin the cleanup phase of the Tremont City Barrel Fill Superfund site this summer. Potentially Responsible Parties, or PRPs, are individuals or organizations potentially responsible for, or potentially contributing to contamination at a Superfund site.

The cleanup phase at the site is starting with field work activities that are part of the Pre-Design Investigation (PDI). The PDI field work is now beginning after the completion of a legal agreement known as a Consent Decree in October 2022, and the approval of the Pre-Design Investigation Workplan (PDIWP) for the site in April 2023. Additional information regarding the status of the site and the next step taking place is on the back of this factsheet.

Upcoming Work in the Tremont City Barrel Fill Site

The field work activities starting this summer at the site are described in the PDIWP document, and will include locating utilities, assessing the condition of monitoring wells, and conducting geotechnical borings. The PDIWP can be found on the *Site Documents & Data* section on the Tremont City Barrel Fill site's [webpage](#), see information in the box to the left. It is estimated that the PDI field work will take about five weeks to complete.

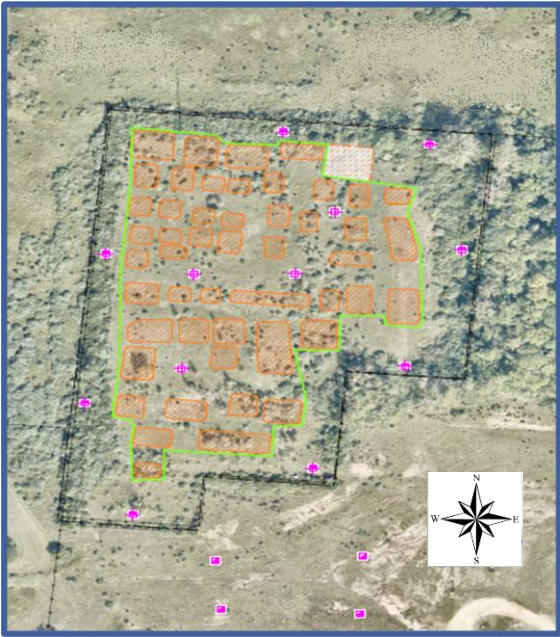

Upcoming Meeting & Updates

EPA will hold a **public meeting** on **Wednesday, June 7, from 6 to 7:30 p.m.** in the **Cafeteria** of **Northwestern High School**, 5780 Troy Rd., Springfield, Ohio. After a brief presentation, EPA and PRP representatives will answer questions about the status of the site and the upcoming field work activities.

EPA and PRP representatives will also provide similar site updates on Tuesday, June 6 during the *Springfield City Commission's Work Session* at 6:05 p.m. in Springfield City Hall; and on Wednesday, June 7 at the *Board of Clark County Commissioners meeting* at 8:30 a.m. in Room 151 of the Springview Government Center in Springfield.

About the Tremont City Barrel Fill Site

The site is a closed industrial waste landfill about 1.5 miles west of Tremont City and about 3.5 miles northwest of Springfield. The site covers 8.5 acres on the northwest corner of a larger, 80-acre property that also includes the Tremont City Landfill and the Tremont City Waste Transfer Facility. From 1976 to 1979, about 51,500 drums and about 300,000 gallons of industrial liquid waste were disposed of in waste cells. All disposal operations at the site stopped in 1980 and a soil cover of three to four feet was placed over the area. Soil was added in subsequent years and now the cover over the waste cells ranges from 10 to 17 feet deep. The site is being addressed under the Superfund alternative (SA) approach. EPA negotiates SA approach agreements with PRPs for site investigations and site cleanups. The SA approach uses the same investigation

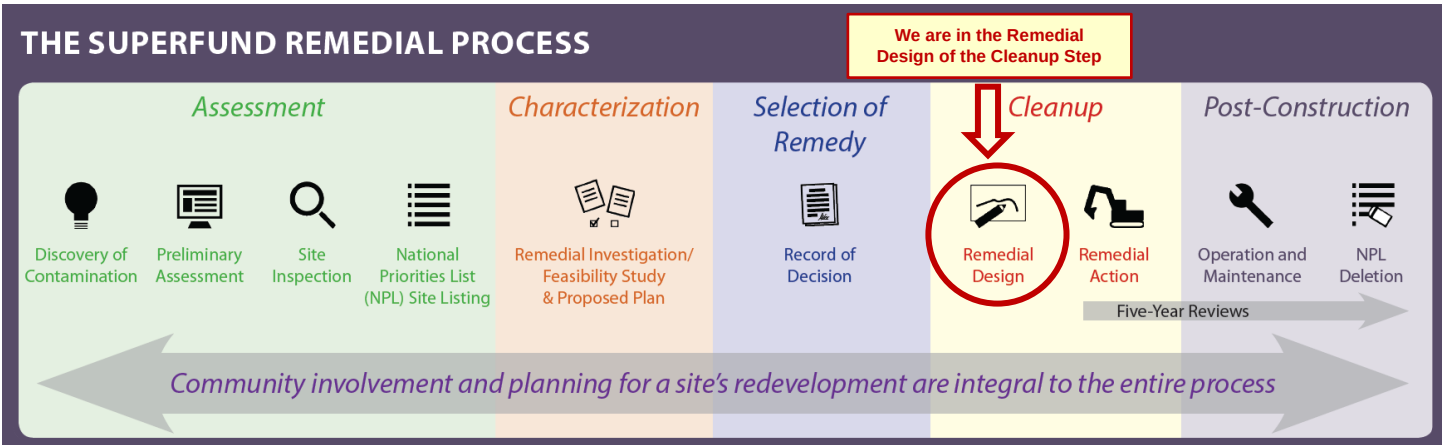

Map showing the approximate extent of the barrel fill and waste cells at the site

cleanup process and standards that are used for sites listed on the National Priorities List. Detailed information regarding the remedy for the site is available on the Tremont City Barrel Fill site's webpage.

Status of the Site & Next Step

The PDI field work starting this summer at the site is part of the Remedial Design (RD) phase in the Superfund remedial process, see the figure below. The PDI will address data gaps needed to support the engineering design. The RD is where technical specifications for the cleanup plan are designed. The Remedial Action (RA) follows the RD phase, and it involves the actual construction or implementation phase of Superfund site cleanup. The RD and RA for the site are based on the specifications described in the 2011 Record of Decision and adjusted in the 2018 Explanation of Significant Differences document. In October 2022 a Consent Decree legal agreement was finalized requiring seven PRPs to clean up contamination at the site. After the PDI field work is finished, a PDI Evaluation Report with the results of Pre-Design Investigation activities will be published. The report is expected to be completed by the end of the fall season this year.
