Forward

The Draft Final Soil Feasibility Study Report, Revision 03, was prepared for the United States Environmental Protection Agency by EA Engineering, Science, and Technology, Inc., PBC (EA) in May 2021. No additional comments were received, and the report was edited by the EPA to update the report date and identify the draft final as the Final Soil Feasibility Study, Revision 03, dated August 17, 2021.

1. INTRODUCTION

EA Engineering, Science, and Technology, Inc., PBC (EA) has prepared this Feasibility Study (FS) Report for the U.S. Environmental Protection Agency (EPA) for the Wilcox Oil Company Superfund Site (site) in Bristow, Creek County, Oklahoma (Figure 1-1) under Remedial Action Contract (RAC) Number EP-W-06-004 and Task Order 0128-RICO-06GG. This report addresses soil contamination at the site. The groundwater extent of contamination remains under investigation and will be addressed in a separate report.

This revised FS Report, incorporates the comments from the EPA on the FS Report, Revision 01 which was submitted on 22 March 2021. The responses to comments on the FS Report, Revision 02 are provided in Appendix A.

EA prepared this report based on the Remedial Investigation (RI) Report, Revision 02 (EA 2020a), Human Health Risk Assessment (HHRA), Revision 03 (EA 2020b), and Screening Level Ecological Risk Assessment (SLERA), Revision 01 (EA 2020c), and in accordance with regulations and guidance documents that include, but are not limited to, the following:

- National Oil and Hazardous Substance Pollution Contingency Plan (NCP), 40 Code of Federal Regulations (CFR) Part 300

- *Guidance for Conducting Remedial Investigations and Feasibility Studies under Comprehensive Environmental Response, Compensation, and Liability Act* (CERCLA), Office of Solid Waste and Emergency Response [OSWER] Directive 9355.3-01 (EPA 1988)

This FS was drafted following the framework provided in the EPA Guidance for Conducting RIs and FS under CERCLA (EPA 1988).

1.1 PURPOSE AND SCOPE

The purpose of this report is to support identification and evaluation of potential remedies that address soil contamination at the site by:

- Proposing the preliminary remedial action objectives (RAOs);

- Defining specific preliminary remediation goals (PRGs); and,

- Developing and analyzing a range of remedial alternatives.

1.2 REPORT ORGANIZATION

This FS is divided into the following chapters:

- ***Chapter 1, Introduction***—Presents the purpose of this FS Report and its organization.
- ***Chapter 2, Site Description and Background***—Provides a summary of the site history, results of RI, HHRAs and ecological risk assessments (ERAs), site conceptual site model (CSM), and potential groundwater remedial technologies.
- ***Chapter 3, Groundwater Data Gap and Potential Technologies***—Discusses existing data gap for groundwater and technologies that may be considered for future groundwater remediation.
- ***Chapter 4, Remedial Action Objectives***—Defines RAOs, proposes PRGs, and identifies the applicable or relevant and appropriate requirements (ARARs) for the site.
- ***Chapter 5, Development and Screening of Technologies***—Identifies and screens various potential remedial technologies and options that may be used to address chemical of concern (COC)-impacted soil.
- ***Chapter 6, Development of Remedial Alternatives***—Presents the remedial alternatives and the components of each alternative.
- ***Chapter 7, Evaluation of Remedial Alternatives***—Presents the detailed analysis and comparative analysis of the alternatives.
- ***Chapter 8, References***—Provides the list of references used in this report.

2. SITE DESCRIPTION AND BACKGROUND

2.1 SITE DESCRIPTION

The Wilcox Oil Company site is an abandoned and demolished oil refinery and associated tank farm located north of Bristow, Creek County, Oklahoma (Figure 1-1). It is situated by Route 66 to the west; a residential area and Turner Turnpike to the north and northwest; Sand Creek to the west and southwest; and residential, agricultural, and wooded areas to the east and south. The approximate geographic coordinates for the site are 35°50'31" North latitude and 96°23'02" West longitude (EA 2020a). The site spans approximately 140 to 150 acres and has been divided into five (5) major former operational areas (Figure 2-1):

- The Wilcox Process Area
- The Lorraine Process Area
- The East Tank Farm
- The North Tank Farm, and
- The Loading Dock Area.

Previous activities associated with the facility operations caused site contamination. Some refinery waste is still present at the site, and the site is fenced and secured to deter trespassing and potential contact with the waste.

The Wilcox Process Area is approximately 26 acres in size and is fenced. Most of the equipment and storage tanks used in the past were auctioned and/or salvaged by private landowners; any remaining structures are in ruins. Four aboveground storage tanks, a number of discarded drums and pieces of scrap iron and piping remain at the site. A former lead additive area is barren and located at the southwest portion of the Wilcox Process Area. There are multiple areas of stressed vegetation, barren soil, and visible black tarry waste of a hydrocarbon nature. Buildings in the northern and eastern parts of the former refinery were used as residences and are therefore considered as such, although they are currently vacant. An intermittent creek (West Tributary) flows southward across the eastern portion of the refinery process area through a small pond in the southeast corner of the Wilcox Process Area into Sand Creek. Hydrocarbon waste has also been observed in several drainage channels that empty into Sand Creek.

The Lorraine Process Area is approximately 8 acres, fenced, and to the west of the Wilcox Process Area across the railroad tracks. No refinery structures remain in the area. The First Assembly of God Church (currently vacant), a playground, and a vacant residence (parsonage) are located in this area. Sand Creek borders the western boundary of the area. A drainage feature is located near the northwestern corner of the former process area that drains south into Sand Creek. Similar to the Wilcox Process Area, there are multiple areas of stressed vegetation, barren soil, and visible, black tarry waste present in the area.

The East Tank Farm is located to the east of the Wilcox Process Area and is approximately 80 acres. The area includes pits, ponds, and a number of circular berms that surrounded former tank locations. All of the former crude oil storage tanks have been removed; however, remnants of

the former tank locations remain visible. It is not known if underground piping associated with the tanks remains in place or was removed. Many of the berms surrounding the pits, ponds, and former tanks have been breached or leveled. The three residential properties, which are occupied, are located on or directly next to former tank locations in the East Tank Farm. There are multiple areas of stressed vegetation, barren soil, and visible black tarry waste. The East Tributary is located along the eastern boundary of the East Tank Farm and perennially flows south through a series of ponds to Sand Creek.

Magellan Midstream Partners, LP operates a pumping station in the north-western portion of the East Tank Farm Area, as well as an active pipeline that transects the East Tank Farm, Loading Dock, and North Tank Farm Areas from the southeast to the northwest. Magellan Midstream Partners, LP pumps several different petroleum products through the active pipeline, including kerosene, gasoline, jet fuel, and diesel.

The North Tank Farm is located north of Refinery Road, also referred to as E0810, and west of the railroad tracks and is approximately 20 acres. All the tanks and other structures that were used to support Lorraine Refinery have been removed. An occupied residence is located in the center of the North Tank Farm. There are areas of stressed vegetation, and visible black tarry waste is present.

The Loading Dock Area is approximately 7 acres and is located north of the Wilcox Process Area and east of the North Tank Farm and railroad tracks. The Loading Dock Area was used for loading and unloading product by rail. There are multiple areas of stressed vegetation, barren soil, and visible black tarry waste of a hydrocarbon nature, similar to the rest of site.

2.2 SITE HISTORY

The property was used for oil refinery operations from 1915 until about November 1963. A modern, upgraded oil refinery plant was constructed in 1929 and consisted of a skimming plant, cracking unit, and re-distillation battery with a vapor recovery system and treatment equipment. The Wilcox Oil Company expanded when it acquired the Lorraine Refinery in 1937. Wilcox Oil Company sold the property to a private individual in 1963. Most of the equipment and storage tanks were auctioned or salvaged for scrap metal by the new property owners. Wilcox Oil Company currently no longer operates in Oklahoma. Based on information from the Oklahoma Secretary of States' office, the company merged with Tenneco Oil Company in 1967. On 24 May 2013, EPA proposed the site to the National Priorities List (NPL). On 12 December 2013, the site officially became a Federal Superfund site (EPA Identification No. OK0001010917), when it was added to the NPL.

2.2.1 Previous Investigation and Removal Activities

The EPA and ODEQ have conducted multiple investigations at the site since 1994. The details of the investigations can be found in the individual documents listed in the RI Report (EA 2020a).

In September and October 2017, EPA conducted a removal action and removed oily, tarry sludge and contaminated soils from a residential property at the site. Approximately 1,329 tons of impacted soils and sludge were removed and disposed offsite (Weston 2017). The area was backfilled with clean soil, graded, and reseeded.

2.2.2 Source Control Record of Decision Summary

A Source Control Record of Decision (ROD) Summary was issued in September 2018. The Source Control ROD is limited in scope and addresses specific refinery tank waste locations and the lead additive area source material through excavation, treatment, and offsite disposal (EPA 2018). This source control action is an early/interim action that does not constitute the final remedy for the site; therefore, any subsequent actions to address the remaining risks and threats posed by the site conditions will be documented in a final site-wide decision document. This FS Report provides support for the site-wide decision document.

2.3 SURFACE FEATURES

The site topography generally slopes to the south and southwest on the western portion of the site toward Sand Creek and southeast on the eastern portion of the site toward the East Tributary. Sandstone outcrops are present throughout. The railroad tracks run through the western portion of the site, dividing the North Tank Farm and Loading Dock Area, and Wilcox Process and Lorraine Process Areas. Several drainage features are present at the site. The West Tributary, an intermittent stream, is located along the eastern side of the Wilcox Process Area; the East Tributary, a perennial stream, and five ponds are located within the East Tank Farm; and several smaller drainage channels transect the southern portion of the Wilcox Process Area east of the railroad. All streams and channels flow southward to Sand Creek (EA 2020a) at the southern and southwestern boundaries of the site. Sand Creek meanders approximately 3.5 miles south and east from the site until it merges with Little Deep Fork Creek.

A wetland survey was conducted in September 2016 and identified five wetland areas at the site (EA 2017) (Figure 2-2). Three wetlands are located in the Wilcox Process Area, one in the North Tank Farm, and one in the East Tank Farm. Among the five wetlands, three are connected with Sand Creek. These include the scrub-shrub wetland in the Wilcox Process Area associated with West Tributary, the wetland in the North Tank Farm with vegetated drainage ditches to Sand Creek, and the scrub-shrub wetland on the north boundary of East Tank Farm along the East Tributary. The forested and emergent wetlands in the Wilcox Process Area are not directly connected with any tributaries and appear to obtain water from surficial runoff (EA 2017).

There are seven residential buildings/houses at the site, one in the North Tank Farm, one in the Lorraine Process Area, two in the Wilcox Process Area, and three in the East Tank Farm. The houses in the Lorraine Process Area and Wilcox Process Area are currently unoccupied while the rest of the houses in the other areas are occupied. A church and a playground are located in the Lorraine Process Area.

Staining of the soil, black tarry waste, stressed vegetation, and barren areas are present throughout the site. Storage tanks, refinery-related debris, and piping still remain in the Wilcox Process Area, while evidence remains of former tank berms that were cut and leveled in the East Tank Farm (EA 2020a).

2.4 FUTURE LAND AND GROUNDWATER USE

Residential use is expected to continue for all residential properties in the East Tank Farm, Lorraine Process Area, and Wilcox Process Area. A large portion of the East Tank Farm, currently used for grazing, may be used as a residential property in the future based on discussions with the current landowner. The residential area in the Wilcox Process Area includes the house, storage tanks, and driveway.

The remaining portion of the Wilcox Process Area consists of the remaining refinery structures and features, which is currently unused. It is likely that the anticipated reuse for this property would be industrial; however, residential considerations for this portion remain.

Residential properties associated with the North Tank Farm, the Lorraine Process Area, and one property along Refinery Road in the Wilcox Process Area are currently on public water supply. The public water system is supplied by four city water wells approximately 400 feet (ft) deep in the Vamoose-Ada aquifer. Residences located on or near the East Tank Farm, and the southernmost property in the Wilcox Process Area, obtain water from individual groundwater wells set in the Barnsdall Formation, which is much shallower than the Vamoose-Ada aquifer (EA 2020a).

2.5 GEOLOGY AND HYDROGEOLOGY

The site is situated on the Pennsylvanian-aged Barnsdall Formation, which is composed of fine-grained sandstone overlain by shale. Thickness ranges from 80 to 200 ft (ODEQ 2008) but is approximately 200 ft thick at the site. Sandstone outcrops of the Barnsdall Formation are common throughout the site. Southeast of the former refinery, the underlying Pennsylvanian-aged Wann Formation and underlying Iola Limestone are exposed. The Wann Formation varies in thickness from 40 to 180 ft and is comprised of shale and fine- to medium-grained sandstone. The Iola Limestone ranges in thickness from 15 to 20 ft and consists of a calcareous fine-grained sandstone and limestone with some shale.

Approximately 0.25 miles to the southeast of the former refinery, Quaternary-aged alluvial deposits associated with Sand Creek occur. These deposits consist of sand, silt, clay, and lenticular beds of gravel that overlie the older geologic units where these deposits exist. Thickness in these deposits ranges from 5 to 50 ft (25 ft average). Given that Sand Creek borders the site to the south, localized alluvium may be present (ODEQ 2009).

The Barnsdall Formation is a bedrock aquifer and is not considered a principal groundwater resource by the Oklahoma State Department of Health (ODEQ 1994). It consists of massive-to-thin beds of coarse-to-fine grain sandstone, irregularly interbedded with sandy to silty shale.

Under the Barnsdall Formation lies the Vamoose-Ada aquifer in close proximity to the west of the site. The Vamoose-Ada aquifer is an important central Oklahoma regional drinking water aquifer (E&E 1999), which is the source for the public water supply in the area.

The shallowest regional water-bearing formation in the upper part of the Barnsdall Formation is unconfined and is overlain by the unconfined shallow perched groundwater zone. The Barnsdall Formation potentially receives groundwater recharge from precipitation and infiltration from the perched groundwater zones. The shallowest regional water-bearing formation (associated with the Barnsdall Formation) is reportedly less than 25 ft below ground surface (bgs) (ODEQ 1994). Depths to seasonal perched groundwater zones are less than 10 ft and depth to groundwater ranged from 4.84 to 15.97 ft bgs in the groundwater monitoring wells installed within the Lorraine and Wilcox Process Areas. The primary groundwater flow path for the perched groundwater zone is to the south towards Sand Creek. Figure 2-3 presents a potentiometric surface map based on December 2018 data. The local gradient averages approximately 0.002 ft per ft across this portion of the site at an estimated velocity of 1.3 ft per year.

2.6 REMEDIAL INVESTIGATION RESULT SUMMARY

The RI was conducted during a series of eight field events that occurred from August 2016 through December 2018. In 2016, a geophysical survey, a Rapid Optical Scanning Tool laser-induced fluorescence survey, and a field-portable X-ray fluorescence survey across portions of the Wilcox Process Area, the Lorraine Process Area, and the East Tank Farm was performed as well as a passive soil gas survey and vapor intrusion sampling. A total of 473 surface soil samples, 355 subsurface soil samples, 44 sediment samples, 56 surface water samples, 35 groundwater samples, and multiple waste characterization samples (16 waste and multiple test pits locations where waste was visibly present) were collected during the sampling events (EA 2020a). In August 2020, a data gap investigation primarily associated with groundwater sampling was completed.

Samples collected during the RI were analyzed for volatile organic compounds (VOCs) including 1,2-dibromoethane, polycyclic aromatic hydrocarbons (PAH), semivolatile organic compounds, target analyte list metals (including mercury), and cyanide. A portion of these samples were also analyzed for hexavalent chromium, polychlorinated biphenyls, dioxins/furans, and soil parameters. Additionally, sediment analyses included acid volatile sulfide and simultaneously extracted metals, moisture, percent total solids and pH, while additional surface water parameters included hardness, pH, total dissolved solids, total suspended solids, and alkalinity.

The vapor intrusion investigation included a passive soil gas survey targeting a select list of VOCs, including benzene. Based on these results, additional sampling was conducted at existing structures to further assess the potential for vapor intrusion and included ambient air samples, indoor air sampling, sub-slab air sampling, and a crawl space sample. Samples were analyzed for VOCs using method TO-15. Indoor air samples were collected from existing buildings within the Lorraine Process Area and Wilcox Process Area.

The August Data Gap investigation focused on groundwater sampling conducted at existing wells and at new, temporary well locations to further delineate possible contaminant plumes in the Wilcox Process Area and the Lorraine Process Area. Aquifer tests were performed at existing monitoring wells to determine site-specific hydraulic parameters necessary for developing groundwater models to evaluate potential remedial options for aquifer restoration. Groundwater levels in existing monitoring wells were gauged and a survey of Sand Creek was conducted to establish static water level and investigate possible communication between the groundwater and creek. Supplemental surface waste samples were collected to provide additional data on potential waste sources. Appendix B provides details of the data gap investigation.

The RI results indicated that the site soil, sediment, surface water, and groundwater have been impacted by the refinery operations and contain concentrations of contaminants that required further review and evaluation under a HHRA and an ERA.

2.7 SUMMARY OF HUMAN HEALTH RISK ASSESSMENT

The following sections summarize the HHRA.

2.7.1 Introduction

The role of the HHRA is to quantify the risks associated with potential exposure to hazardous substances at a site in the absence of any remedial action or control, including institutional controls (ICs) (e.g., property use restrictions). A HHRA was performed to estimate the probability and magnitude of potential adverse human health effects from exposure to contaminants associated with the site assuming no remedial action was taken. The HHRA aids in risk management decisions and provides the basis for taking action. The HHRA identifies the exposure areas, exposure pathways, and contaminants that may be considered for remedial action. Figure 2-4 provides the HHRA CSM.

The HHRA followed EPA methodology and included the following information: the methodology for data grouping and identification of chemicals of potential concern (COPCs), the exposure assessment, the toxicity assessment, the site-specific risk assessment results, and the uncertainty analysis.

2.7.2 Data Grouping and COPC Identification

The HHRA evaluated RI samples of soil, groundwater, sediment, surface water, indoor air, and sub-slab soil gas samples. It is noted that the HHRA did not evaluate sample locations that were located within the area that will be addressed by the Source Control ROD. The EPA risk-based screening levels (EPA 2021) were the primary screening levels used for risk-based screening purposes in the HHRA, and COPCs were identified by comparing the maximum detected concentration to the appropriate screening level. COPCs are chemicals that are carried through the quantitative exposure and risk estimate portions of the HHRA.

Based upon the process areas and site use, the site was divided into five major former operational areas: the Wilcox and Lorraine Process Areas, the East and North Tank Farms, and the Loading Dock Area. The HHRA determined COPCs and evaluated potential risk concerns based upon these five operational areas.

2.7.3 Exposure Assessment

In the exposure assessment, the receptors of concern and potential exposure pathways were identified.

Current Onsite Trespasser - The risk to current site trespassers was evaluated based on exposure to site surface soil (0 to 2 ft bgs) and sediment/surface water including the drainages, ponds, and Sand Creek, as follows:

- Incidental ingestion of surface soil
- Dermal contact with surface soil
- Inhalation of particulates from windblown soil released to outdoor air
- Incidental ingestion of surface water
- Dermal contact with sediment and surface water.

Future Onsite Child and Adult Residents - The risk to future site child and adult residents was evaluated based on exposure to site surface (0 to 2 ft bgs) and subsurface soil (2 to 10 ft bgs), sediment/surface water (including the drainages, ponds, and Sand Creek), groundwater, and home-grown produce/beef, as follows:

- Incidental ingestion of soil
- Dermal contact with soil
- Inhalation of chemicals adsorbed to windblown soil released to outdoor air
- Incidental ingestion of surface water
- Dermal contact with sediment and surface water
- Ingestion of groundwater as tap water source
- Dermal contact with groundwater as tap water source
- Inhalation of chemicals volatilized from groundwater during domestic use
- Ingestion of home-grown produce
- Ingestion of beef.

Future Onsite Commercial/Industrial Worker - The risk to future site industrial workers was evaluated based on exposure to site surface (0 to 2 ft bgs) and subsurface soil (2 to 10 ft bgs), and groundwater, as follows:

- Incidental ingestion of surface soil
- Dermal contact with surface soil
- Inhalation of particulate from windblown soils released to outdoor air
- Ingestion of groundwater as tap water source

- Dermal contact with groundwater as tap water source
- Inhalation of chemicals volatilized from groundwater during use as a tap water supply.

Future Onsite Construction Workers - The risk to future site construction workers was evaluated based on exposure to site surface (0 to 2 ft bgs), subsurface soil (2 to 10 ft bgs), and groundwater, as follows:

- Incidental ingestion of soil
- Dermal contact with soil
- Inhalation of chemicals absorbed to windblown soil in outdoor air (i.e., fugitive dust)
- Dermal contact with groundwater and subsequent incidental ingestion
- Inhalation of volatiles while working in a trench.

2.7.4 Risk Characterization

The final step in the HHRA is the characterization of the potential risks associated with exposure to chemicals detected at a site. The HHRA evaluated each of the five operational areas for potential cancer risks and noncancer hazards from soil, sediment, surface water, groundwater, and ambient air.

Additionally, lead in soil was evaluated through blood-lead modeling. Lead risks for residents and trespassers were evaluated using EPA's Integrated Exposure Uptake Biokinetic Model (IEUBK) Lead Model. For worker exposures, lead was modeled using Recommendations of the Technical Review Workgroup for Lead, Calculations of Blood Lead Concentrations in Nonresidential Areas (i.e., the Adult Lead Model). Modeled blood level results are compared to the established threshold of no more than 5 percent of the population having a blood-lead of 5, 8, and 10 micrograms lead per deciliter (µg/dl) or greater.

Results of the HHRA are listed below, and further discussion related to PRGs is provided in Section 4 and Appendix C.

Indoor air samples from existing buildings within the Lorraine Process Area and Wilcox Process Area did reveal the presence of COCs. However, sub-slab soil gas samples did not reveal any COCs below these buildings. As a result, the indoor air COCs are likely a result of indoor source areas and not vapor intrusion from groundwater. Therefore, vapor intrusion from groundwater into existing buildings at the site is not considered complete, and indoor air COCs were not assessed further in the HHRA.

For all receptors and all operational areas:

- The potential exposures to surface water and sediment at the site do not exceed the EPA acceptable cancer risk range, and noncarcinogenic hazards are below the level of concern. Therefore, these media are not expected to pose human health concerns and no COCs are identified for surface water or sediment.

- The potential exposures to soil at the site do not exceed the EPA acceptable cancer risk range. Soil is not expected to pose excess cancer risk concerns; therefore, no COCs are identified for soil. Further assessment of benzo(a)pyrene (BaP) is discussed in the following section.

- The risk assessment determined that potential noncancer hazards associated with exposures to soil through the ingestion of home produce and beef may be present for all areas, and is primarily associated with the metals, cobalt, iron, and copper. These metals are sporadically detected across the soil medium, are collocated within proposed remediation areas, and are less than background (cobalt and copper). There is a high degree of uncertainty in the models because these pathways model potential health impacts from surface soil concentrations rather than actual produce and/or beef concentrations. Due to uncertainties associated with uptake from soil and the conservative assumptions in the model, the results are likely an overestimation of potential risk. None of these metals were identified as significant contributors to risk or as significant contributors based on target organs for soil direct contact. As a result, these metals are not identified as COCs.

For all receptors and the East Tank Farm, North Tank Farm, and the Loading Dock operational areas:

- The potential exposures to lead in soil do not result in a greater than 5% chance of exceeding a target blood lead level of 5, 8, or 10 µg/dl; therefore, lead in soil is not identified as a COC for these areas. (Further assessment of lead in the East Tank Farm is discussed in Section 4.)

For the Lorraine Process Area:

- The potential exposures to lead in surface soil by the future resident child may result in a greater than 5% chance of exceeding a target blood lead level of 5, 8, or 10 µg/dl; therefore, lead in soil is identified as a COC for this area.

- The potential exposures to lead in soil by the future commercial/industrial worker may result in a greater than 5% chance of exceeding a target blood lead level of 5 µg/dl; therefore, lead in soil is identified as a COC for this area.

- The potential exposures to lead in subsurface soil do not result in a greater than 5% chance of exceeding a target blood lead level of 5, 8, or 10 µg/dl for the future resident child and the future commercial/industrial worker; therefore, lead in subsurface soil is not identified as a COC.

For the Wilcox Process Area:

- The potential exposures to lead in surface soil by the future resident child may result in a greater than 5% chance of exceeding a target blood lead level of 5, 8, or 10 µg/dl; therefore, lead in soil is identified as a COC for this area.

- The potential exposures to lead in surface soil by the future commercial/industrial worker may result in a greater than 5% chance of exceeding a target blood lead level of 5 µg/dl; therefore, lead in soil is identified as a COC for this area.

- The potential exposures to lead in subsurface soil do not result in a greater than 5% chance of exceeding a target blood lead level of 5, 8, or 10 µg/dl for the future resident child and the future commercial/industrial worker; therefore, lead in subsurface soil is not identified as a COC for this receptor.

Groundwater potential risks were assessed based upon monitoring well results within the perched aquifer. The HHRA determined that potential exposures to groundwater exceed the EPA acceptable cancer risk range and the noncarcinogenic hazard level of concern for the resident, commercial/industrial worker, and construction worker. Due to the need for additional groundwater data, further identification of COCs and evaluation of potential alternatives will be conducted at a future date. Refer to Section 3 and Appendix B for further discussion.

2.7.5 Additional Evaluation of Potential Risk Concerns

The HHRA evaluated potential human health concerns based on the entire exposure area of each of the five operational areas. However, these areas are larger than representative areas that are typically evaluated for residential yards. To further evaluate the surface soil medium of concern and evaluate potential concerns for smaller exposure areas (i.e., potential residential yards), sample results were reviewed to determine if areas of high concentrations are present in soil within the five operational areas. Elevated concentrations of BaP are present on the Lorraine Process Area, within the northwest area, along E0810 Road, and just north of the church's parking lot. This grassy area is approximately 1 acre, which is equivalent to an average residential yard for the area. All samples collected within this area were combined to determine a BaP exposure point concentration (EPC) of 24.1 mg/kg, based on the 95% upper confidence limit of the mean (95UCLM). The resulting cumulative, lifetime excess carcinogenic risk for the resident adult and child was $2x10^{-4}$, which exceeds the EPA acceptable risk range. Noncarcinogenic hazards were 1 and 0.2 for the resident child and resident adult, respectively. Appendix C presents the BaP sample locations and concentrations evaluated, the ProUCL output, and risk calculations using the EPA Regional Screening Level calculator. As a result, BaP is identified as a COC for the Lorraine Process Area.

For the Lorraine Process Area:

- The potential exposure to BaP in soil exceeds the EPA acceptable cancer risk range and may pose a potential risk to the future child and adult resident. BaP in soil is identified as a COC in the Lorraine Process Area.

2.8 SUMMARY OF ECOLOGICAL RISK ASSESSMENT

EA conducted a SLERA in January 2020 following Steps 1, 2, and 3 of EPA's Ecological Risk Assessment Guidance (EPA 1997, 1998). This section provides an overall summary of the ERA.

2.8.1 Introduction

The purpose of the SLERA was to characterize and quantify potential environmental impacts from residual chemicals in soil, sediment, and surface water from site activities. The assessment was conducted in accordance with the process outlined in the document, *Ecological Risk Assessment Guidance for Superfund: Process for Designing and Conducting Ecological Risk Assessments* (EPA 1997) and other relevant EPA guidance.

The process for ERA outlined in EPA guidance includes eight steps (EPA 1997, 1998). Steps 1 and 2 represent the SLERA. The SLERA uses precautionary assumptions regarding exposure and toxicity to develop a CSM and identify constituents of potential ecological concern (COPECs). The CSM defines complete and significant exposure pathways and identifies assessment and measurement endpoints. The screening level evaluation relies on chemical analytical data.

Step 3 of the SLERA process is the Baseline Risk Assessment Problem Formulation (BRAPF). The BRAPF draws from the risk evaluation performed in the SLERA to identify COPECs, exposure pathways, assessment endpoints, and risk questions requiring further consideration. The BRAPF often includes a refinement of the screening level risk calculations through more realistic or more relevant exposure and toxicity data. The goal of the BRAPF is to provide a clear definition of the potential ecological risks for the site. This problem formulation forms the basis for either further assessment or, in cases where sufficient data are available, risk management if necessary. In the case of this site, SLERA and BRAPF refinement of risk calculations were performed.

2.8.2 SLERA Results

Potential receptors evaluated in the SLERA for the site include plants, soil invertebrates, amphibians and reptiles, birds, mammals, benthic invertebrates, and aquatic organisms. Potential ecological receptors and scenarios are shown in the CSM (Figure 2-5).

The SLERA used conservative assumptions, including conservative toxicity reference values (TRVs) and input parameters for food web models (e.g., 100% site use, 100% earthworm ingestion, etc.). The evaluation also assumed maximum exposure scenarios (e.g., maximum

ingestion rates and EPCs). Modifications were conducted as part of Step 3 of the ERA process that used more realistic EPCs (i.e., 95UCLM of the data) and incorporated lowest effect level TRVs. Despite the modifications, the SLERA identified potential risks (based on hazard quotients [HQs] greater than 1).

2.8.3 SLERA Refinement

SLERA refinement was conducted to evaluate COPECs for lower trophic level receptors (e.g., benthic invertebrates, plants, and soil invertebrates) that had SLERA HQs greater than 1 based on 95UCLMs. Further details are included in Appendix C of this report. The findings of the risk assessment are as following:

- The risk assessment determined that potential risks associated with exposures to lead in site soil (all 5 areas) are present for plants, insectivorous mammals, insectivorous birds, and herbivorous birds. Areas of concern are collocated with human health remediation areas; therefore, remediation based on an ecological lead exposure PRG is not proposed for soil.

- The risk assessment determined that potential risks associated with exposures to vanadium in the site soil (all 5 areas) are present for plants and insectivorous birds. Areas of concern are collocated with human health remediation areas; therefore, remediation based on an ecological vanadium exposure PRG is not proposed for soil.

- Potential risks to aquatic organisms in the ponds (cadmium, lead, BaP) and streams (manganese) from elevated concentrations of contaminants in the water column are likely to be reduced following removal of contaminated soil in the uplands. No remediation based on potential risks associated with surface water is proposed.

- Concentrations of total PAHs in stream sediment, when compared to the probable effects level (PEL) of 16.8 mg/kg (MacDonald et al 1996) indicates no potential risk to benthic organisms from total PAHs in stream sediments; therefore, no remediation based on potential risks to benthic invertebrates from PAHs is proposed.

- Because of infrequent detections of VOCs, the volatile nature of the chemicals, the absence of direct toxicological studies, and the unsubstantiated theoretical nature of the soil screening values, it is not expected that VOCs would result in unacceptable risk to populations of soil invertebrates; therefore, no remediation based on potential risks to soil invertebrates from VOCs is proposed.

- It is unlikely that there would be adverse impacts to the plant or soil invertebrate communities at the site from sporadic elevated concentrations of metals (zinc, manganese, copper, and chromium) based on the following, and as a result, no remediation based on potential risks to plants or soil invertebrates is proposed.

- Low HQs identified in the SLERA, based solely on a screen against Ecological Soil Screening Levels or screening benchmarks from Efroymson et al (Efroymson et al 1997a,b)

- Low potential for uptake and toxicity from naturally occurring metals, many of which are essential nutrients

- Sporadic elevated concentrations not linked to facility activities

- Lack of sufficient ecological habitat from long-term and/or continued future industrial, residential, and agricultural usage of many portions of the site

- Removal of select concentrations of metals during excavations for lead and/or BaP reduces the overall HQs.

3. GROUNDWATER DATA GAP AND POTENTIAL TECHNOLOGIES

Groundwater was investigated and poses unacceptable risk to human health as indicated in the previous section of this FS Report. A data gap investigation was conducted in August 2020. The following subsection summarizes the data gap investigation results, and detailed results are provided in Appendix B. Although this FS only addresses the soil contamination, this section provides information on potential technologies that may be considered for future groundwater remediation.

3.1 GROUNDWATER DATA GAP

The HHRA identified potential health risks associated with exposure to groundwater in the perched shallow groundwater unit, which could be utilized for domestic use, in the Wilcox Process Area and Lorraine Process Area.

Due to the limited groundwater data available, it was determined that a data gap investigation would be required to collect additional data on site groundwater conditions. Temporary wells were installed, and groundwater samples were collected at old and new monitoring wells, temporary wells, and water wells. Aquifer tests were performed at existing monitoring wells to evaluate site-specific hydraulic parameters. Groundwater levels were gauged, and a survey of Sand Creek was conducted to evaluate potential communication between groundwater and the creek. The data gap investigation results are summarized in the Technical Memorandum on Data Gap Investigation (Appendix B).

3.2 POTENTIAL GROUNDWATER REMEDIAL TECHNOLOGIES

A few potential technologies for the site groundwater can be explored based on the current understanding of the site, i.e., pump-and-treat, *in situ* enhanced bioremediation (ISB); *in situ* chemical oxidation (ISCO), and *in situ* stabilization and solidification (ISS). A full evaluation of alternatives should be conducted once more data are collected.

A light non-aqueous phase liquid (LNAPL) is present within the Wilcox Process Area and is identified as gasoline based on current data. The LNAPL's quantity, mobility and recoverability are currently not known, but if the LNAPL is found mobile and highly recoverable, potentially pump-and-treat or skimming technologies can be used to recover the LNAPL for offsite disposal. Based on the LNAPL observation at MW-04, however, its recovery rate is likely low and pumping may not be effective. Depending on remedial objectives, for mass control and reduction of mobility, ISS may be used to physically/chemically bind LNAPL with stabilizing reagents. However, ICs should be put in place to protect the stabilized area, and long-term monitoring may also be necessary to monitor potential leaching of stabilized contaminants into the dissolved phase.

Similar to LNAPL, if the dissolved phase plume is massive and unstable, pump-and-treat can be used to hydraulically control the plume and treat the contaminants. However, the pump-and-treat system will need components that treat both metals and organic contaminants from the

commingled plumes. Granular activated carbon or other absorbing materials can be used to treat the recovered petroleum hydrocarbons in the system, but are not effective for metals. Therefore, another treatment train would be needed, which may include an ion exchange system or a pH adjuster to precipitate metals. The system can become complex, and costs can be high for operation and maintenance. In addition, low recovery rates of the temporary wells and low hydraulic conductivity observed at the site may limit the cost-effectiveness of a pump-and-treat system.

ISB is an *in situ* technology to consider, and it involves injection of amendments into groundwater to stimulate aerobic biodegradation of benzene, naphthalene, and other petroleum hydrocarbons. Commercially available products of ISB amendments include the oxygen-releasing compounds by Regenesis and PermeOx by PeroxyChem. Although ISB will probably not directly address the lead, arsenic, and other dissolved metals in the groundwater, added oxygen-containing compounds can also react with dissolved metals, specifically dissolved iron and manganese, to generate iron and manganese oxides, which can bind and precipitate lead and arsenic.

ISCO as another *in situ* technology involving injection of chemical oxidant amendments into the subsurface to transform contaminants in groundwater into innocuous byproducts. Common ISCO reagents include hydrogen peroxide, sodium persulfate, potassium permanganate, sodium percarbonate, and ozone. These reagents can efficiently oxidize a wide range of compounds including benzene, naphthalene, and other organic compounds. However, ISCO may mobilize metals, especially for redox sensitive metals (i.e., chromium, arsenic, and lead). Therefore, it is not applicable for the areas with metal exceedances and could potentially make metal plumes worse. In addition, LNAPL presence at the site may lower the effectiveness of ISCO by coating the reagent particles and reducing reaction potential with the contaminants.

Provect-OX®, a commercial product made by Provectus Environmental Products, Inc., was found to be able to oxidize naphthalene and pentachlorophenol in the groundwater at another EPA Superfund site without increasing metal concentrations. Provect-OX® contains persulfate (as an oxidant) and ferric iron (as an activation agent) in a single premixed package. It has been found that residual iron and sulfate generated from persulfate decomposition can be used as electron acceptors for facultative reductive processes. Therefore, Provect-OX® may promote secondary enhanced bioremediation to manage residuals in the groundwater, which may be applicable to the site groundwater. A bench scale treatability study for ISCO must be conducted to determine a sufficient dosing of the oxidant to account for natural oxidant demand in the subsurface and also evaluate potential metal mobility caused by the oxidant.

Technologies that require injection target treated areas directly, so enhanced distribution of reagents is very important for improving treatment efficiency. The site's high heterogeneity may be a concern for injected reagents to be evenly distributed to the contaminated subsurface. Therefore, ISS can be an option to overcome the shortcomings at the site. During ISS, a large diameter rig is used to mix and homogenize amendments with soil/groundwater. The mixed materials are then used to form monoliths with certain strength and structural integrity to hold the contaminants in place. The use of monolith structures aide in minimizing leaching to the

groundwater. Typical ISS reagents include Portland cement, slag, fly ash, bentonite, organoclay, and powdered activated carbon. ISS can effectively stabilize metals and petroleum hydrocarbons in the groundwater but has been found to not be able to reduce naphthalene leaching potential in some projects. Therefore, it may be used in the source areas to significantly reduce the source contributions to the dissolved plumes. This option can address both soil and groundwater contaminated with LNAPL, metals, and organic compounds at the same time because the rig can mix reagents from unsaturated to saturated zones in one operation. A bench scale treatability study is required to develop an optimal reagent mixture prior to a full scale ISS implementation. In addition, as stated previously, ICs are required to prevent any earth moving activities in the ISS treated area.

Based on data gaps, the groundwater evaluation is taken no further, and the remainder of this FS will focus on soil.

3.3 GROUNDWATER USE

Groundwater in the process areas of the site is not currently used as a tap water source. It is noted that the State of Oklahoma does consider the shallow, perched groundwater as a "General Use Groundwater (Class II)," which can be used for beneficial use (ODEQ 2020).

4. REMEDIAL ACTION OBJECTIVES

The EPA has provided the RAOs and PRGs for contaminated soil at the site and the details are in the following sections along with a discussion of the ARARs. Additionally, the areas and volumes of contaminated soil exceeding the PRGs and used to support and evaluate technologies in this FS are provided.

4.1 REMEDIAL ACTION OBJECTIVES

RAOs define what the remedial actions should accomplish to protect potential receptors. Consistent with EPA guidance and the NCP (40 CFR § 300.430(e)(2)(i), these objectives consider the following:

- COCs
- Exposures based on risk assessments, including ARARs
- Receptors
- PRGs.

Human Health

4.1.1 Soil

The HHRA identified that there are potential human health concerns associated with exposure to surface soil under future anticipated land uses.

Benzo(a)pyrene
Potential exposures to BaP in surface soil at the site may pose a potential risk to residents in the Lorraine Process Area through direct contact, ingestion, and inhalation pathways.

Lead
Potential exposures to lead in surface soil at the site may pose a potential risk for the future child having a greater than 5% chance of exceeding target blood-lead levels of either 5, 8, and/or 10 µg/dl within the Lorraine Process Area and the Wilcox Process Area.

Potential exposures to lead in surface soil at the site may pose a potential risk for the future commercial/industrial worker having a greater than 5% chance of exceeding target blood-lead level of 5 µg/dl within the Lorraine and Wilcox Process Areas.

4.1.1.1 Waste Materials

Most of the waste at the site is relatively shallow. The waste materials encountered consisted primarily of surficial, crusted tar-like materials, in some cases flowable tar-like material, black stained soil, and oily soil.

Early in the RI process, 9 source areas (the lead additive area and 8 tank waste locations) were identified for early action; therefore, the source control action is limited in scope to address these specific source areas. The areas that are addressed under the Source Control ROD are presented in Figure 2-6.

All remaining waste materials were sampled and investigated during the RI and are evaluated under this FS in relation to the RAOs and PRGs developed for soil and associated with the future child resident.

4.1.2 Sediment and East Tank Farm

Although the HHRA did not identify excess human health risks concerns for exposure to sediment within Sand Creek, the tributaries, or onsite and nearby ponds, the pond and tributary located within the Wilcox Process Area is routinely dry and accessible by future residents. The pond and tributary are adjacent to the lead additive area and received run-off containing concentrations of lead that result is potential human health and ecological risk. Additionally, this tributary and pond discharge to Sand Creek. As a result, the sediment in the tributary and pond are considered soil and are evaluated under this FS in relation to the RAOs and PRGs developed for soil and associated with the future child resident.

Likewise, the HHRA did not identify human health concerns related to exposures to lead for the East Tank Farm, based upon an evaluation of the entire area; however, the western portion of the East Tank Farm has several locations that will be considered part of the soil remediation for lead due to the presence of lead at concentrations consistent with those present within the Lorraine and Wilcox Process Areas. There are four locations, and the associated concentrations are ETF-SB-136-0.5 (2,100 mg/kg) and ETF-SB-136-2.0 (2,730 mg/kg); ETF-SB-142-2.0 (729 mg/kg); ETF-SB-131-0.5 (555 mg/kg) and ETF-SB-131-2.0 (687 mg/kg); and ETF-SB07-116-1.0 (356 mg/kg). The soil will be considered and evaluated under this FS in relation to the RAOs and PRGs developed for soil and associated with the future child resident.

4.1.3 Groundwater

As noted in Section 3, data gaps associated with groundwater need to be addressed; therefore, no RAOs or PRGs are provided in the FS.

4.1.4 Ecological

As noted previously in Section 2.8.2, no ecological remediation goals are identified based on the results of the ERA. Contaminants identified as posing potential threats to ecological receptors were further assessed with the following conclusions:

- COCs lead and vanadium are collocated in areas where human health risk will be addressed; therefore, these metals and associated risks to ecological receptors will be addressed.

- Concentrations of PAHs are lower than concentrations expected to pose potential risks (i.e., PEL for benthic organisms).

- The presence of VOCs is sporadic and infrequent, and these compounds readily evaporate into the air. There is an absence of direct toxicological studies and uncertainty associated with the soil screening values for these compounds. Based on this, it is not expected that VOCs would result in unacceptable risk.

- Potential risks to aquatic organisms in the ponds (cadmium, lead, BaP) and streams (manganese) from elevated concentrations of contaminants in the water column are likely to be reduced following removal of contaminated soil in the uplands.

- It is unlikely that there would be adverse impacts to the plant or soil invertebrate communities at the site from sporadic elevated concentrations of metals (zinc, manganese, copper, and chromium) based on the following:

    - Potential risks are based solely on a screen against Ecological Soil Screening Levels or screening benchmarks from Efroymson et al. (Efroymson et al 1997a,b)

    - Low potential for uptake and toxicity from naturally occurring metals, many of which are essential nutrients

    - Sporadic elevated concentrations not linked to facility activities

    - Lack of sufficient ecological habitat from long-term and/or continued future industrial, residential, and agricultural usage of many portions of the site

    - Cleanup of soil areas associated with human health risk will also address concentrations of other metals and contaminants, thus reducing the overall exposure concentration and associated potential risk.

4.2 APPLICABLE OR RELEVANT AND APPROPRIATE REQUIREMENTS

Remedial actions must protect public health and the environment. Section 121(d) of CERCLA requires that federal and state ARARs be identified and that response actions achieve compliance with the identified ARARs. This requirement makes CERCLA response actions consistent with pertinent federal and state environmental requirements as well as adequately protecting public health and the environment. Therefore, compliance with the ARARs is included in the development and evaluation of the remedial alternatives.

4.2.1 Definition of Applicable or Relevant and Appropriate Requirements

As defined in the NCP, “applicable requirements” are cleanup standards, standards of control, criteria, or facility siting laws that specifically address a hazardous substance, pollutant, contaminant, remedial action, location, or other circumstance found at a CERCLA site. Only the

state standards that are identified by a state in a timely manner and that are more stringent than federal requirements may be applicable (40 CFR 300.5).

Relevant and appropriate requirements may not specifically apply but may address similar issues or situations that might be encountered at the site. A requirement must be either applicable or both relevant and appropriate to be selected as an ARAR.

4.2.2 Classifications of Applicable or Relevant and Appropriate Requirements

ARARs for remedial alternatives can be generally classified into the following three categories:

- ***Chemical-Specific*** are usually based on health- or risk-based numerical values or methodologies used to determine acceptable amounts or concentrations of chemicals that may be found in, or discharged to the environment, i.e., Maximum Contaminant Levels or State Water Quality Standards.

- ***Location-Specific*** are restrictions placed on the concentrations of hazardous substances or activities solely because they are in certain environmentally sensitive areas. Some examples of special locations regulated under various federal laws include floodplains, wetlands, historically significant cultural resources, and sensitive ecosystems or habitats.

- ***Action-Specific*** are usually technology- or activity-based requirements or limitations on actions or conditions involving specific substances.

In addition to these three categories, some EPA and State guidelines also need "to be considered" (TBC). The TBC are non-promulgated advisories, non-enforceable guidelines or criteria and standards useful for developing a remedial action criterion or evaluating protection of human health and / or environment. Examples include EPA reference doses and risk specific doses that may be used for determining the level of cleanup.

Table 4-1 presents the ARARs for the site. These ARARs are identified based on the site conditions and in consideration of potential remedial alternatives developed in the FS.

4.3 PRELIMINARY REMEDIATION GOALS

PRGs were determined for each of the chemicals identified as COCs. Only two chemicals were identified as potential concerns for soil: BaP (Lorraine Process Area) and lead (Lorraine Process Area and Wilcox Process Area). A PRG was developed for BaP based upon a cancer risk of 10^{-6}. The PRGs for lead in soil were determined based upon the blood-lead levels of 5, 8, and 10 µg/dl of lead in blood. The IEUBK model was used to determine the appropriate PRGs for the resident child. For the worker, the EPA Adult Lead Model was used to determine the appropriate PRGs for the various blood-lead levels. Detailed information on PRG calculations is included in Appendix C. The site-specific PRGs are chemical limits calculated using toxicity values and site-specific exposure conditions evaluated in the HHRA (EA 2020b).

The following equations were used to calculate site-specific PRGs:

For carcinogens:

$$Site - Specific\ PRG\ = \frac{EPC}{Risk} \times TR$$

Where,
TR = target carcinogenic risk level (i.e., 10^{-6})
Risk = chemical-specific cumulative carcinogenic risk shown in HHRA
EPC = chemical-specific exposure point concentration presented in HHRA.

For non-carcinogens:

$$Site - Specific\ PRG\ = \frac{EPC}{HQ} \times THQ$$

Where,
THQ = target hazard quotient (i.e., 1)
HQ = target organ specific and chemical-specific total hazard quotient shown in HHRA
EPC = chemical-specific exposure point concentration presented in HHRA.

The calculated PRGs for the site soil COCs, lead and BaP, for each receptor are listed below:

Residential lead PRGs based on a child resident:

- Lead – 200 mg/kg (residential use) at a target blood lead level of 5 µg/dl
- Lead – 300 mg/kg (residential use) at a target blood lead level of 8 µg/dl
- Lead – 400 mg/kg (residential use) at a target blood lead level of 10 µg/dl.

Commercial/Industrial lead PRGs based on a commercial/industrial worker:

- Lead – 460 mg/kg (commercial/industrial use) at a target blood lead level of 5 µg/dl
- Lead – 846 mg/kg (commercial/industrial use) at a target blood lead level of 8 µg/dl
- Lead – 1,103 mg/kg (commercial/industrial use) at a target blood lead level of 10 µg/dl.

Residential BaP PRG based on excess cancer risk of $1x10^{-6}$ for a child/adult resident:

- BaP – 0.12 mg/kg (residential) at an excess cancer risk of $1x10^{-6}$.

As noted in Section 4.1.4, addressing the risks to human health would address the ecological risks based on the future land use, which is assumed to be residential use at the site. The southern portion of the Wilcox Process Area is anticipated to be used for commercial/industrial use; however, consideration as residential remains.

As noted in Section 4.5, the difference in the volume of soil addressed under a residential scenario versus a commercial/industrial scenario for the Wilcox Process Area is minimal and estimated at approximately 5,959 total cubic yards (cy). Therefore, the lead PRG of 200 mg/kg

(residential use) at a target blood lead level of 5 μg/dl is selected as the PRG that will be used to evaluate potential remedial alternatives in this FS. This PRG is protective of the child resident, the commercial/industrial worker, and ecological receptors. Using a residential PRG also addresses contamination and allows for unlimited use and unrestricted exposure to the soil and would not require future operations and maintenance or ICs.

4.4 REMEDIAL ACTION OBJECTIVES

The RAOs were developed for contaminated soil to address unacceptable human health risks identified through the risk assessment process taking into account potential future land use and contaminant exposure pathways.

RAOs prevent human (and ecological) direct, inhalation, and ingestion exposures to soil (including the drainage and pond sediment within the Wilcox Process Area) for the future resident child containing lead concentrations of 200 mg/kg or greater that potentially result in a greater than 5% chance of exceeding a target blood lead level of 5 μg/dl.

RAOs prevent human direct, inhalation, and ingestion exposures to soil for the future resident adult and child containing BaP concentrations of 0.12 mg/kg or greater in the Lorraine Process Area that result in an excess cancer risk greater than $1x10^{-6}$.

4.5 OCCURRENCE AND VOLUME OF SOILS ABOVE PRGS

The soils exceeding the lead PRG are identified across the Wilcox and Lorraine Process Areas and the western portion of the East Tank Farm. The soils exceeding the BaP PRG are located in the Lorraine Process Area. Figures 2-7 through 2-11 show the areas.

For the purpose of this FS, the exceedance boundaries are estimated based on the assumption that a boundary line is in the midpoint between the sampling point with the exceedance and the nearby sampling point of non-exceedance. The depth of excavation is estimated to be 2 ft, which is consistent with data results as well as exposure scenarios. Additional sampling at the time of the design can be completed to further refine the extent of the contaminated soil and reduce uncertainty related to the location and size of remediation areas. The estimated volume of impacted soil including sediment is as follows:

4.5.1 Lorraine Process Area – Estimated Volume for Lead and BaP Impacted Soil

This area is considered residential and contains several locations exceeding the BaP PRG (Figure 2-7). The BaP contamination depth is from 0 to 2 ft bgs and covers four areas with a total of 10,728 square ft (ft^2). There are two areas with exceedances of the lead PRG (Figure 2-7). The depth of lead contamination is from 0 to 2 ft bgs. The lead exceedance areas cover a total of 37,775 ft^2. An additional area covering 9,210 ft^2 contains exceedances for both BaP and lead.

The following table summarizes the volume of soil with exceedances within the Lorraine Process Area.

Soil Volume Estimate: Lorraine Process Area

Property Type	Area (ft^2)	Depth (ft)	Volume (ft^3)	Volume (cy)
Residential	9,528	2	19,056	706
Residential	9,210	2	18,420	682
Residential	400	2	800	30
Residential	400	2	800	30
Residential	400	2	800	30
Residential	28,225	2	56,450	2,091
Residential	9,550	2	19,100	707
			Total Volume (cy)	**4,275**

The exceedance area covers approximately 57,713 ft^2 with an estimated volume of 4,275 cy.

4.5.2 Wilcox Process Area – Estimated Volume for Lead Impacted Soil

This area is divided into two areas based on the land use; one is a residential area and the other area is commercial/industrial; however, residential remains a consideration for all of the Wilcox Process Area. Based on this uncertainty, the estimated volumes based on the residential and the resident/commercial/industrial future uses are presented.

The residential area is assumed to be located in the northern Wilcox Process Area and includes the house, storage tanks, and driveway (Figure 2-8). The depth of the lead contamination is from 0 to 2 ft bgs. Three sediment samples, considered as soil as noted in previous sections, also exceed the soil residential lead PRG. The exceedance area covers approximately 53,394 ft^2 with an estimated volume of 3,955 cy.

The industrial area exceeds the lead PRG at multiple sample locations (Figure 2-8 and Figure 2-9). The depth of the lead contamination is primarily from 0 to 2 ft bgs. The exceedance area covers approximately 161,219 ft^2 with an estimated volume of 11,942 cy. The total estimated volume of soil under the resident/commercial/industrial future uses is 15,897 cy.

The following table summarizes the areas with exceedances within the Wilcox Process Area, assuming a lead PRG of 200 mg/kg for the residential areas and a lead PRG of 400 mg/kg for the commercial/industrial areas.

Soil Volume Estimate: Wilcox Process Area
(Residential and Commercial/Industrial)

Property Type	Lead PRG (mg/kg)	Area (ft^2)	Depth (ft)	Volume (ft^3)	Volume (cy)	Subtotal Volume (cy)
Residential	200	39,942	2	79,884	2,959	
Residential	200	13,452	2	26,904	996	*3,955*
Commercial/Industrial	400	7,324	2	14,648	543	
Commercial/Industrial	400	9,953	2	19,906	737	
Commercial/Industrial	400	110,416	2	220,832	8,179	
Commercial/Industrial	400	10,434	2	20,868	773	
Commercial/Industrial	400	10,577	2	21,154	783	
Commercial/Industrial	400	7,969	2	15,938	590	
Commercial/Industrial	400	4,546	2	9,092	337	*11,942*
Total Volume Residential/Commercial/Industrial (cy)						**15,897**

The areas represented in the table above can be observed in Figure 2-8.

A more conservative approach is to classify all of the Wilcox Process Area as residential with a PRG for lead of 200 mg/kg, due to its potential for future residential use. Using this approach and a depth of the lead contamination from 0 to 2 ft bgs, the estimated area covers approximately 295,058, ft^2 with an estimated volume of 21,856 cy.

The following table summarizes the areas with exceedances within the Wilcox Process Area, assuming a lead PRG of 200 mg/kg for all the areas.

Soil Volume Estimate: Wilcox Process Area
(Residential)

Property Type	Lead PRG (mg/kg)	Area (ft^2)	Depth (ft)	Volume (ft^3)	Volume (cy)
Residential	200	39,942	2	79,884	2,959
Residential	200	13,452	2	26,904	996
Residential	200	12,332	2	24,664	913
Residential	200	12,766	2	25,532	946
Residential	200	178,274	2	356,548	13,205
Residential	200	11,479	2	22,958	850
Residential	200	26,813	2	53,626	1,986
Total Volume Residential (cy)					**21,856**

The areas represented in the table above can be observed in Figure 2-9.

The difference between addressing the Wilcox Process Area as residential versus Residential/Commercial/Industrial is an estimated 5,959 cy. The additional volume of soil needing to be addressed under the residential scenario is minimal; therefore, the lead PRG is identified as Lead - 200 mg/kg (residential use) at a target blood lead level of 5 μg/dl. This is protective of the resident, the commercial/industrial worker, and ecological receptors. Using a residential cleanup level removes contamination to allow for unlimited use and unrestricted exposure to the soil and would not require future operations and maintenance or ICs. The residential assumption and estimated volumes are carried through the Comparison of Alternatives.

4.5.3 East Tank Farm – Estimated Volume for Lead Impacted Soil

This area is considered residential use and contains three lead exceedance areas. The depth of lead contamination is from 0 to 2 ft bgs, and the three areas cover a total of approximately 113,948 ft^2 (Figure 2-10) with an estimated volume of 8,441 cy.

The following table summarizes the areas with exceedances within the East Tank Farm.

Soil Volume Estimate: East Tank Farm

Property Type	Area (ft^2)	Depth (ft)	Volume (ft^3)	Volume (cy)
Residential	24,917	2	49,834	1,846
Residential	58,688	2	117,376	4,347
Residential	30,343	2	60,686	2,248
			Total Volume (cy)	**8,441**

4.5.4 All Process Areas – Total Estimated Volume for Lead Impacted Soil/Sediment

In summary, a total of 34,572 cy of contaminated soil and sediment with concentrations above the PRG of 200 mg/kg for lead are used to evaluate and compare soil alternatives in this FS (Figure 2-11).

Soil Volume Estimate: All Process Areas Using PRG of 200 mg/kg

Location	Property Type	Area (ft^2)	Depth (ft)	Volume (ft^3)	Volume (cy)
Lorraine Process Area	Residential	57,713	2	115,426	4,275
Wilcox Process Area	Residential	295,056	2	590,112	21,856
East Tank Farm	Residential	113,948	2	227,896	8,441
				Total Volume (cy)	**34,572**

5. DEVELOPMENT AND SCREENING OF TECHNOLOGIES

This section describes the process of development and screening of technologies. The development process starts by identifying general response actions (GRAs) and associated technologies for soils. The remedial technologies are then screened under the three criteria: effectiveness, implementability, and cost.

5.1 GENERAL RESPONSE ACTIONS AND REMEDIAL TECHNOLOGIES

GRAs may include institutional actions, containment, treatment, removal, disposal, or a combination of these as described in the EPA 1988 guidance (EPA 1988). As required by the NCP (40 CFR §300.430.e.6), selected remedial alternatives must include no further action (NFA) to be used as the baseline against which the effectiveness of all other alternatives are evaluated. Thus, NFA is included in the alternative evaluation for the site soil.

NFA means nothing is done to the site. NFA does not control, contain, or remediate contaminant sources, and it does not reduce the mobility, volume, or toxicity of the contamination at the site.

In addition, ICs are also included in evaluation of alternatives. ICs may include restrictions on land use, access restrictions, environmental monitoring, security measures, notification, and education advisories to inform the public and adjacent landowners about the site. Common ICs include zoning, enforceable land use restrictions (i.e., deed notice and covenant restriction), and long-term environmental monitoring.

The GRAs suitable for the site soils include following:

- NFA
- ICs
- Containment
- Removal / disposal
- Treatment.

Table 5-1 presents the GRAs and their individual technologies considered in this section.

5.2 REMEDIAL TECHNOLOGY SCREENING

This section presents and screens the remedial technologies presented in Table 5-1.

5.2.1 Preliminary Screening Criteria

Three preliminary screening criteria (i.e., effectiveness, implementability, and cost) were used to screen the remedial technologies. Definitions for these criteria are presented below.

Effectiveness is a measure of a technology's ability to: (1) reduce toxicity, mobility, or volume (TMV); (2) minimize residual risks; (3) afford long-term protection; (4) comply with ARARs;

(5) minimize short-term impacts; and (6) achieve protectiveness in a limited duration. Technologies that are significantly less effective than other technologies may be eliminated from the alternative development process. Technologies that do not provide adequate protection of human health and the environment are also eliminated from further consideration.

The effectiveness evaluation is focused on the following elements:

- Potential effectiveness of technologies in handling the areas or volumes of the soil to meet the RAOs.

- Potential impacts to human health and the environment during the construction and implementation phase.

- Reliability and proven effectiveness of the technologies with respect to the COCs under site-specific conditions.

Implementability is a measure of both technical and administrative feasibility of implementing a technology process. Initial technology screening eliminates technologies that are clearly ineffective or unusable at the site. Implementability aspects include:

- Technical feasibility that may include constructability or workability under site conditions, being able to operate and maintain to meet the PRGs, and the complexity of the technology.

- Administrative feasibility that may include permitting, and accessibility (easements, rights-of-way required; access to the properties to be addressed; and ability to impose ICs).

- Availability of services and materials which may include availability of special equipment, materials and specially trained and skilled workers required, and offsite treatment and disposal capacity.

Cost (capital and operation and maintenance costs) is a measure of resources that are required in technology implementation. The costs used in this document were obtained from published resources and previous projects. Cost evaluation at the technology screening phase is relative, typically presented as high, low, or medium compared to other technologies within the same technology type. The technologies with high cost but low protection of human health and environment are not considered for further evaluation.

5.2.2 Technology Screening Summary

Table 5-1 presents the rationales for technologies retained or eliminated based on the three preliminary criteria. The soil technologies and process options retained for further evaluation include NFA, ICs, excavation, containment and disposal. Based on the site conditions and as described previously, no treatment technologies have been retained as soil alternatives.

5.2.2.1 NFA (Retained)

NFA has been retained in accordance with the requirements of Subpart F of the NCP as a baseline for comparison with the other technologies.

5.2.2.2 Land Use Controls (Retained)

Land use controls (LUCs) are administrative measures developed to protect human health and safety from the presence of hazards. LUCs are measures that limit access or use of a property to protect people from site hazards or provide warnings of a potential site hazard. LUCs include engineering controls and physical barriers (e.g., fencing), educational programs (e.g., public notification of residual concerns), and administrative and legal controls (e.g., zoning restrictions and easements) that help to minimize the potential for human exposure. They have been retained for alternative development.

LUCs would be effective for reducing the potential exposure to the site soil. LUCs are implementable and costs are low, therefore, LUCs are retained.

5.2.2.3 Excavation (Retained)

Excavation can involve removal of all impacted soil and "hot spots" from a site. Excavation is a well-proven and effective method for removing impacted materials from a site to prevent direct contact and exposure to the contaminants. Therefore, it will address the relevant remedial objectives for the site. Excavation is a mature technology and easily implemented. Cost for excavation is low compared to other technologies. Therefore, this technology is retained for further consideration.

5.2.2.4 In Situ Treatments (Not Retained)

In situ treatment technologies treat contaminants in place. Compared to *ex situ* treatment technologies, *in situ* remedial technologies handle contaminated media in place; therefore, its process of handling hazardous materials potential is low, as well as disposal costs and exposure of the workers to the contaminants.

In Situ Solidification/Stabilization

ISS processes involve adding and mixing reagents with soil to trap, treat, or immobilize contaminants. This technology is typically implemented by grouting or using a large-diameter auger or other equipment to mix with soil while adding reagents. Treated soil will become stabilized to prevent contaminants from leaching out to groundwater. Types of solidifying/stabilizing reagents include Portland cement, fly ash, blast furnace slag, bentonite, organoclay, and powdered activated carbon. Note that *ex situ* solidification/stabilization is discussed separately under *Ex Situ* Treatment section.

ISS can be effective in stabilizing the contaminated soil and reducing contaminant migration vertically and horizontally. Overall, this technology will reduce the site risks and protect human health and environment. A treatability study is required prior to a full scale implementation to develop mixtures of reagents. However, the site contaminated soil is non-hazardous and is a low-level threat (not a principal threat waste) to the environment, ISS, or any other treatment technologies, therefore would not be cost effective compared to non-treatment technologies. In addition, ICs are required to protect the treated areas from intrusive activities, i.e., excavation, drilling and injections, which may limit future site use and development. Cost of *in situ* solidification/stabilization is high compared to other technologies. Therefore, this technology is not retained because of the high cost and waste still remaining in place at the site.

Phytoremediation

Phytoremediation is a process that uses plants to remove, transfer, stabilize and destroy contaminants in soil. There are six general approaches to phytoremediation: phytoaccumulation, phytodegradation, phytostabilization, phytovolatilization, rhizodegradation, and rhizofiltration (Interstate Technology and Regulatory Cooperation Work Group [ITRC] 1999). A variety of plants have shown limited uptake of metals and BaP in surface soil. A pilot treatability study is necessary to develop ideal environmental conditions for plant growth and remediation before a full-scale implementation. Although it is relatively easy to implement, the effectiveness of phytoremediation may not be reliable and relies on plant types, seasonal temperature change, soil type, pH, and moisture content. In addition, phytoremediation may require an extended time period compared to several other technologies. Cost of phytoremediation is low to medium depending on needs for long-term maintenance, replanting, and monitoring. Therefore, due to unreliability and uncertainty in effectiveness this technology will not be retained for further consideration.

5.2.2.5 Ex Situ Treatments (Not Retained)

Ex situ treatment involves the excavation and subsequent treatment of soil. The treated soil is either used as backfill within the site or taken offsite for final disposal depending on the final results of the treatment.

Landfarming

Landfarming is a bioremediation technology in which excavated soils are placed in land treatment units (LTUs) and mixed and tilled periodically to blend nutrients/amendments and water to enhance the biological activity within the LTUs. The LTUs are constructed with an impermeable liner i.e., compacted clay or high density polyethylene (HDPE) geomembrane, to protect the soil underneath the treatment area. Sprinkler systems are required for most of the cases to provide irrigation for the system (FRTR 1997).

Landfarming typically is applicable for treatment of lighter petroleum compounds and it becomes less effective for the PAHs with more aromatic rings, i.e., BaP. It is not certain with current data available if landfarming is effective for lead in soil. In addition, landfarming is easy

to implement but it may require a long period of time for microorganisms to degrade or stabilize the soil COCs, although the cost is low; therefore, landfarming is eliminated from further evaluation.

Ex Situ Solidification/Stabilization

Ex situ solidification/stabilization involves excavating and mixing contaminated materials with reagents to stabilize contaminants. The *ex situ* process is typically applicable to hazardous wastes to reduce the leaching potential and remove their hazardous/toxic characteristics before offsite disposal.

Ex situ solidification/stabilization is effective for lead in soil and is implementable, but the cost may be high. Based on the site data, the majority of the site soil is non-hazardous, which would not require treatment if disposed offsite. This technology does not provide better benefits for the soil remediation compared to non-treatment technologies; therefore, it is not considered for further evaluation.

Soil Washing

Soil washing is a process using a solution of leaching, surfactant, pH-adjustment or chelating agent to remove contaminants. The wash solution with washed COCs is treated by conventional wastewater treatment methods and treated soil can typically be reused onsite or sent offsite for non-hazardous disposal. This process can also be used to separate fines from coarse materials. The majority of contaminants are sorbed to the fines, and once separated the coarse materials could be reused.

Soil washing is an effective method for separating metals from soil. It is implementable with commercially available equipment. However, the process is complex and produces a large amount of wastewater, which can increase the cost significantly. Therefore, it is not considered for further evaluation.

5.2.2.6 Offsite Disposal (Retained)

Disposal includes placement of waste materials in a permanent repository that is subsequently managed to prevent reintroduction of contaminants into the environment. Waste material and contaminated soil removed from the site must be disposed of at an appropriate waste management facility.

Offsite disposal is an effective process for permanently removing impacted soil. Regulatory requirements regarding waste characteristics for the disposed soil would dictate the type of landfill facility. It is implementable and cost is at an average level compared with other technology. This option adequately addresses the RAOs, therefore this process will be retained for further consideration.

5.2.2.7 Onsite Containment (Retained)

Containment technologies control human and/or ecological exposure to COCs by preventing the migration of COCs and/or preventing direct contact with impacted media. Onsite containment includes consolidation and placement of impacted soil under a protective cover or into a containment repository constructed onsite to prevent exposure and minimize the potential migration of COCs.

An onsite containment will address the relevant remedial objectives. It is implementable but it will require ICs to protect the integrity of the repository.

6. DEVELOPMENT OF REMEDIAL ALTERNATIVES

This section presents the remedial alternatives that were retained for the site soil during the technology screening. The technologies retained were assembled to develop a range of alternatives and provide flexibility in selecting preferred alternatives. The development of the alternatives was based on the EPA's document, *Guidance for Conducting Remedial Investigations and Feasibility Studies Under CERCLA* (EPA 1988), which advises to include:

- Alternatives that permanently reduce the TMV of contaminants. The range of alternatives should, if possible, vary in the degree of reliance on long-term management of untreated wastes;
- Permanent solutions to the maximum extent practicable;
- Use of innovative treatment technologies and resource recovery technologies to the maximum extent practicable;
- One or more containment alternatives that involve little or no treatment of hazardous contaminants; and,
- A "No Action" alternative.

The following remedial alternatives were identified as potential alternatives for the soil:

- Alternative S-1: NFA
- Alternative S-2: Soil excavation and offsite disposal
- Alternative S-3: Soil excavation and onsite containment repository
- Alternative S-4: Soil excavation, and onsite consolidation and capping.

Table 6-1 presents a summary of the alternatives and RAOs that each alternative potentially could achieve.

6.1 COMMON COMPONENTS FOR SOIL ALTERNATIVES

There are no common components across all alternatives. However, ICs would be common to all alternatives should the commercial/industrial scenario be selected for the southern portion of the Wilcox Process Area at the time of the ROD.

6.2 ALTERNATIVE S-1: NO FURTHER ACTION

Alternative S-1 assumes no remedial action for soil. It is used as a baseline for comparison to other remedial alternatives as required by the NCP. Under NFA, no remedial actions will be conducted at the site and contaminated soil posing unacceptable risks would be left in place.

6.3 ALTERNATIVE S-2: SOIL EXCAVATION AND OFFSITE DISPOSAL

Alternative S-2 includes excavation of soil exceeding the PRGs and disposal of the material offsite in a Resource Conservation and Recovery Act (RCRA) permitted and licensed landfill. Figure 2-11 show the locations of the soil exceeding the PRGs.

The main components of Alternative S-2 include:

- Pre-excavation delineation of contaminated soil exceeding the PRGs;
- Site preparation including removal of vegetation in the excavation areas, setup of work zones, installation of erosion and sediment controls near the creek and associated tributaries if excavation nearby, and utility clearance;
- Excavation of the contaminated soil;
- Transportation and disposal of the excavated material at an offsite disposal facility; and,
- Backfill and restoration of excavated areas.

A backhoe or excavator is generally used to perform the excavation. It is estimated that approximately 34,572 cy of soil will be excavated, sampled for waste characterization, and transported offsite for disposal. After removal of source materials, the excavated area will be documented and sampled to determine area, depth, volume removed, and concentrations of soil at the base and sides of excavation. The excavated areas will be backfilled with clean soil from an offsite location and re-vegetated. All excavation areas will be graded for drainage and appropriate erosion controls implemented.

During excavation activities, dust control measures, such as water spray, will be used to mitigate fugitive dust. Air monitoring equipment will be used to establish a safety perimeter based on the presence of potential vapors and/or dust to ensure the health and safety of onsite workers, the surrounding community, and the environment. Onsite workers directly involved in the excavation may be required to use respirators.

It is assumed for purposes of this FS that excavated soil will be characterized as non-hazardous waste based on historical data. Waste characterized as non-hazardous waste will be transported and disposed of at a RCRA Subtitle D Landfill. If the excavated soil is characterized as hazardous, it will be transported and disposed of at a RCRA Subtitle C Landfill. All trucks will be decontaminated prior to leaving the site, will be tarped to contain source materials within the bed of the truck, and will only transport material via the preapproved transportation route.

Alternative S-2 will meet the site RAOs by removal of the contamination offsite to prevent direct contact and prevent contaminants migrating to the groundwater and/or surface water. Since the material will be removed from the site, there will not be any post-remedial action maintenance or monitoring, and the site will be available for assumed land uses without restrictions on soil.

6.4 ALTERNATIVE S-3: SOIL EXCAVATION AND ONSITE CONTAINMENT REPOSITORY

Alternative S-3 includes excavating the contaminated soil and consolidating and placing the excavated soil in a containment repository constructed onsite. A potential location of the containment repository can be in the mid-portion of the Wilcox Process Area, as showed in Figure 2-11, which is away from tributaries and drainage basins or creeks. The location of the containment repository will be determined during the remedial design and shall be in accordance with ODEQ solid waste rules and Oklahoma Administrative Code (OAC) 252 Chapter 515. The excavation of the contaminated soil in this alternative is the same as that in Alternative S-2. However, the excavated soil will be placed in an onsite containment repository, rather than being transported offsite for disposal. The containment repository will be constructed to meet the regulatory requirements for RCRA subtitle D landfill and OAC 252:515.

It is estimated that approximately 34,572 cy of soil will be excavated and placed in the repository. Therefore, the repository is assumed to be approximately 360 ft by 150 ft and 20 ft in height.

The main components of Alternative S-3 include:

- Same components from Alternative S-2 for soil excavation, backfill and restoration of the excavated areas.
- Site preparation of the containment repository area including removal of vegetation and setup of the boundaries of the repository based on containment repository design.
- Installation of bottom liner of the containment repository.
- Placement and compaction of the excavated soil in the containment repository.
- Installation of a low permeability cap.
- Implementation of ICs to restrict the land uses in the containment repository area and prohibit any drilling and earth-moving activities at the repository area.
- Implementation of a groundwater program to monitor groundwater around the repository area in accordance with regulatory requirements.

A containment repository in general consists of, from bottom to the top:

- A bottom liner:
    - Compacted clay liner in 12-inch thickness with a hydraulic conductivity less than 1×10^{-7} centimeter per second (cm/s)

    - Geosynthetic clay liner
    - 60-milli-inch (mil) HDPE textured geomembrane
    - Composite drainage net
    - Protective cover.
- Excavated contaminated soil
- A cap:
    - A geosynthetic clay liner with a hydraulic conductivity less than 1×10^{-8} cm/s
    - A textured 60-mil low-density polyethylene geomembrane
    - A drainage layer constructed with composite drainage net
    - A protective soil cover at least 2.5 ft in thickness
    - A vegetation layer at least 6 inches in thickness.

A leachate collection system is assumed not necessary under this alternative. Water in a containment repository may be generated from precipitation entering through the cap, and the initial moisture content of the soil itself. Physical, chemical, and biological processes of the soil compounds can also produce water and other compounds, but the water generated from these processes is small compared to precipitation and infiltration. Due to the impermeable cap of the containment repository, precipitation into the repository would be limited and reduced. Therefore, the leachate generated from the repository is likely low. However, if this alternative is selected, design of the repository will need to include a water balance analysis to determine if a leachate collection system is required.

This alternative will address the RAOs by containing the contaminated material in the repository to prevent the direct exposure to the environment and leaching to the groundwater. However, the contaminated soil will remain at the site, thus ICs will be required to restrict the future land use and earth moving activities, which could potentially damage the repository. Groundwater will be monitored to confirm that the bottom liner prevents the contaminants in the repository from leaching to the groundwater. Because waste remains in place above levels that allow for unlimited use and unrestricted exposure, five-year reviews will be required.

6.5 ALTERNATIVE S-4: SOIL EXCAVATION AND ONSITE CONSOLIDATION AND CAPPING

Alternative S-4 includes excavating the contaminated soil and consolidating and capping it at the site. A potential location of the consolidation and capping can be the same as the location of the containment repository under Alternative S-3, as showed in Figure 2-11. The consolidation and capping location shall be selected in accordance with ODEQ solid waste rules and OAC 252 Chapter 515. The location will also be determined by its position away from the creek and residential areas, as well as its centrality. The excavation of the contaminated soil in this alternative is the same as that in Alternative S-2. However, the excavated soil will be placed in a consolidation location and capped, rather than being transported offsite for disposal or placed in a constructed containment repository. The difference between Alternative 3 and Alternative 4 is the bottom liner construction.

The main components of Alternative S-4 include:

- Same components from Alternative S-2 for soil excavation, backfill and restoration of the excavated areas
- Site preparation of the consolidation and capping area including removal of vegetation, and setup of work zones, staging areas, and the boundaries of the consolidation and capping
- Placement and compaction of the excavated soil in the consolidation area
- Installation of a low permeability cap, which would be the same as the cap under Alternative S-3
- Implementation of ICs to restrict the land use in the capping area and prohibit any drilling and earth-moving activities at the capping area
- Implementation of a groundwater program to monitor groundwater around the cap in accordance with regulatory requirements.

This alternative will address the RAOs by capping the contaminated soil to prevent the direct exposure to the environment, and minimize infiltration, therefore reducing leaching of the contaminants to the groundwater. However, the contaminated soil will remain at the site, thus ICs will be required to restrict the future land use and earth moving activities. Groundwater will be monitored to confirm that the capped contaminants are prevented from leaching to the groundwater. Because waste remains in place above levels that allow for unlimited use and unrestricted exposure, five-year reviews will be required.

7. EVALUATION OF REMEDIAL ALTERNATIVES

This section evaluates the remedial alternatives developed in the previous section following the EPA's RI/FS guidance (EPA 1988). The alternatives are evaluated based on the nine criteria listed in the NCP. Alternatives are compared, and key tradeoffs among them are identified to determine the most appropriate remedial actions for the site. The approach is designed to provide decision-makers with sufficient information to adequately compare the alternatives and provide the basis for selecting an appropriate site remedy pursuant to CERCLA requirements.

7.1 ALTERNATIVE EVALUATION

Evaluation of alternatives consists of the following two components:

- Evaluation of each alternative against seven of the nine evaluation criteria
- Comparative evaluation of alternatives relative to one another to identify key tradeoffs.

Table 7-1 presents the detailed evaluation of soil alternatives individually and following subsection presents comparative evaluation of the alternatives. The detailed evaluation confirms if alternatives achieve the threshold criteria, presents significant aspects and differentiators of the alternatives, and identifies uncertainties associated with the evaluation.

7.2 COMPARATIVE ANALYSIS

This section presents the comparison among the alternatives based on the detailed evaluation of each alternative. The comparison potentially identifies the most favorable alternative on each evaluation criterion. Table 7-2 provides a summary of comparative analysis for the soil alternatives.

7.2.1 Overall Protection of Human Health and Environment

All alternatives, except S-1 NFA, provide overall protection of human health and environment by either removing the soil and disposing offsite or containing the excavated soil onsite, in a construction repository or within a consolidated and capped area. Removing or containing contaminated soil eliminates or reduces the potential for exposures to site contaminants. Alternatives S-3 and S-4 include ICs to restrict land use and protect the containment repository and cap, respectively. Additionally, S-3 and S-4 will require operations and maintenance as well as five-year reviews to ensure protection.

Alternative S-2 ranks the most satisfactory among the three alternatives regarding protection of human health and environment because the contaminated soil will be removed permanently and disposed of offsite in an approved landfill. Under Alternatives S-3 and S-4, additional protection measures (i.e., ICs and five-year reviews) will be necessary to maintain protection at the site.

7.2.2 Compliance with ARARs

Table 4-1 presents a compilation of the federal, state, and local ARARs identified for the site. Compliance with ARARs is not applicable to S-1, NFS. All other alternatives are expected to comply with ARARs.

7.2.3 Long-Term Effectiveness and Permanence

Alternative S-1 will not provide long-term effectiveness and permanence. Alternative S-2 will provide the best long-term effectiveness and permanence because all contaminated soil is removed and disposed of offsite. Alternatives S-3 and S-4 will only provide long-term effectiveness and permanence if certain conditions are met. Since the contaminated soil will remain onsite, Alternatives S-3 and S-4 will require long-term monitoring and maintenance to protect the contaminated materials, eliminate direct exposure to all receptors, and prevent leaching into the groundwater. ICs and five-year reviews will be required to ensure protectiveness.

7.2.4 Reduction of TMV through Treatment

Alternative S-2 reduces TMV of the contaminants with respect to onsite conditions because the contamination will be physically removed from the site, albeit not through treatment. Alternatives S-3 and S-4 reduce mobility of the contaminants with respect to onsite conditions because the contamination will be physically removed and placed in a containment/capped area. The toxicity and volume remain unchanged.

7.3 EVALUATION CRITERIA

The alternatives are evaluated in this section based on the nine criteria required by 40 CFR Section 300.430(e). The nine criteria used to evaluate each alternative are listed below:

<u>Threshold Criteria</u>

- Overall protection of human health and the environment
- Compliance with ARARs.

<u>Balancing Criteria</u>

- Long-term effectiveness and permanence
- Reduction in TMV through treatment
- Short-term effectiveness
- Implementability
- Cost.

Modifying Criteria

- State acceptance
- Community acceptance.

The evaluation criteria are divided into three groups: threshold, balancing, and modifying criteria. The first two criteria are threshold criteria and must be met by the alternative to be eligible for selection as a remedial alternative. The NCP (see 40 CFR 300.430 (f)(1)(ii)(C) (1 to 6)), provides for waiving ARARs under six specific circumstances, otherwise ARARs must be met by the alternative in order to be eligible for selection as a remedial alternative. The next five criteria are balancing criteria and are the primary criteria upon which the detailed analysis is based. Unlike the threshold criteria, the five balancing criteria weigh the tradeoffs between alternatives. A low ranking for one balancing criterion can be offset by a higher ranking on another balancing criteria. The last two criteria are modifying criteria which are deferred until the public comment process has ended and comments from the state and community are received. The nine criteria are described in the following subsections.

7.3.1 Threshold Criteria

To be eligible for selection, an alternative must meet the two threshold criterion or, in the case of ARARs, must justify why a waiver is appropriate.

- **Overall Protection of Human Health and the Environment.** A remedy is protective if it adequately eliminates, reduces, or controls all current and potential risks posed by the site through exposure pathways. Evaluation of protectiveness focuses on the reduction or elimination of site risks by the proposed remedial alternative.

- **Compliance with ARARs.** This criterion is used to evaluate whether each alternative will meet all of the federal and state ARARs or whether there is justification for waiving one or more ARARs. Table 4-1 identifies and presents ARARs for the site.

7.3.2 Balancing Criteria

There are five balancing criteria, described below.

- **Long-Term Effectiveness and Permanence.** This criterion is used to assess the residual risks at the site after RAOs have been met. The primary focus of this criterion is the extent and effectiveness of controls used to manage the risk posed by treatment residuals or untreated materials remaining at the site. The following factors will be considered under this criterion:

    - Adequacy and reliability of remedial controls to mitigate the remaining risks after the remedial activities

    - Magnitude of the residual risks after remedial activities.

- **Reduction of TMV through Treatment.** This evaluation criterion addresses the CERCLA statutory preference for treatment options that permanently and significantly reduce the TMV of the contaminants. The following factors will be considered under this criterion:

  - The amount of hazardous materials that will be destroyed or treated
  - The degree of reduction in TMV measured as a percentage of reduction
  - The degree to which the treatment will be irreversible
  - The type and quantity of treatment residuals that will remain following treatment.

- **Short-Term Effectiveness.** This evaluation criterion addresses the effects of the alternative during the construction and implementation phase until the RAOs are met. Under this criterion, alternatives are evaluated for their effects on human health and the environment during implementation of the remedial action. The following factors will be considered:

  - Exposure of the community during implementation
  - Exposure of workers during construction
  - Environmental impacts resulted from implementation and construction
  - Time to achieve RAOs
  - Sustainability.

- **Implementability.** This criterion addresses the technical and administrative feasibility of implementing an alternative and the availability of various services and materials that may be required during its implementation. The following factors were considered:

  - Ability and difficulties to construct the technology
  - Ability to monitor effectiveness of the remedy
  - Availability of equipment and specialists
  - Availability of offsite treatment and disposal capacity and services
  - Ability to obtain approvals from regulatory agencies.

- **Cost.** Cost encompasses capital costs, and operations and maintenance costs incurred over the life of the project. As stated in the EPA guidance (EPA 2000), cost estimates in the FS are expected to provide an accuracy of minus 30 percent to plus 50 percent (-30 percent to +50 percent). The estimated costs are designed to be used only for evaluating and comparing alternative technologies and not for setting budgets. For cost estimation and comparison purposes, operations and maintenance is assumed to be 30 years; however, operations and maintenance will be required in perpetuity to ensure protectiveness of the remedy. A discount rate of 7% is used to determine the present worth cost for Alternatives S-2 through S-4.

  The Remedial Action Cost Engineering and Requirements® (RACER) software, Version 11.4, was used to develop order-of-magnitude costs for this FS. RACER® is a parametric

and integrated cost estimating program that was developed specifically for estimating costs associated with environmental investigation and remediation projects. It can be used at early order-of-magnitude stages of cost estimating. RACER® has been used by Department of Defense, Department of Energy, contractors, engineering consultants, state regulatory agencies and private sectors.

7.3.3 Modifying Criteria - State and Community Acceptance

State and community acceptance are the two modifying criteria. These two criteria evaluate the issues and concerns of the state and community regarding each alternative. These criteria cannot be evaluated until the state and community have reviewed and commented on the alternatives presented in the FS Report.

7.3.4 Short-Term Effectiveness

All alternatives, except Alternative S-1, pose short-term impacts during implementation of the alternatives on workers, communities, and the environment; however, the impacts are low. Proper personal protective equipment and best practice management will be used to alleviate the impacts. Alternative S-3 will require the longest time to implement due to the construction of the containment repository. The transportation of waste offsite in Alternative S-2 will present the greatest short-term risk to the community due to the use of local roads and highways to transport materials to the landfill.

7.3.5 Implementability

All alternatives except S-1 involve mature technologies and typical construction methods and equipment. Thus, they are readily implementable. However, Alternatives S-3 and S-4 involve more processes and technologies than Alternative S-2. Constructing a containment repository or a cap under Alternatives S-3 and S-4, respectively, will require more materials compared to Alternative S-2, and will involve a quality control and quality assurance program to ensure the liners or cap are constructed in accordance with the design. Therefore, Alternative S-2 ranks the most satisfactory regarding implementability, followed by Alternative S-4, then Alternative S-3.

7.3.6 Cost

Table 7-1 presents the cost of the alternatives for soil. Appendix D provides the detailed cost estimates. Overall, Alternative S-3 is highest in 30-year net present value among the alternatives.

Tables

Table 4-1. Potentially Applicable or Relevant and Appropriate Requirements

ARARs/TBCs	Citation or Reference	Requirements	Applicability
Chemical-Specific ARARs			
Designation of Hazardous Substances, Determination of Reportable Quantities	40 CFR 302.4 – 302.5	This section provides tables on the following substances: a) Listed hazardous substances. The elements, compounds, and hazardous wastes appearing in Table 302.4 are designated as hazardous substances under Section 102(a) of CERCLA. b) Unlisted hazardous substances. A solid waste, as defined in 40 CFR 261.2, which is not excluded from regulation as a hazardous waste under 40 CFR 261.4(b), is a hazardous substance under Section 101(14) of CERCLA if it exhibits any of the characteristics identified in 40 CFR 261.20 through 261.24.	Applicable because hazardous substances might be in the contaminated soil. Waste encountered during the remediation of the contaminated soil will be characterized to determine whether it is hazardous or nonhazardous.
Identification and Listing of Hazardous Waste	40 CFR 261.10; 261.20 - 24	Identifies those waste subject to regulation as hazardous wastes.	The criteria and limitations used to identify wastes as being hazardous or nonhazardous are applicable to all wastes and are relevant and appropriate to all alternatives at the site.
Oklahoma Air Pollution Control Rules	OAC 252:100-3-4; 100-29; 100-43-2 to 100-43-5	Establishes controls for air pollutants; establishes visible emissions limit, fugitive dust controls, and testing and monitoring requirements for air quality.	Applicable to discharge of fugitive dust during remedial actions (i.e., excavation, and placement of contaminated soil in the containment repository).
Location-Specific ARARs			
Migratory Bird Treaty Act	16 United States Code (USC) 703	Protects almost all species of native birds in the United States from unregulated taking.	Applicable if work is taking place in a migratory flyway.

ARARs/TBCs	Citation or Reference	Requirements	Applicability
Permits and Enforcement	CERCLA 121 (e)	This section of CERCLA states that no "federal, state, or local permit" shall be required for any portion of a CERCLA remedial action that is conducted on the site of the facility being remediated. This includes exemption from the RCRA permitting process. Note that the substantive requirements of the regulations must still be met (e.g., construction stormwater must be managed using BMPs).	Applicable to the remedial action at the site.
The Native American Graves Protection And Repatriation Act	25 USC Section 3002 and its regulations Title 43 CFR Part 10.4	Protects Native American graves from desecration through the removal and trafficking of human remains and cultural items including funerary and sacred objects.	Substantive requirements applicable if Native American burials or cultural items are identified within the area to be disturbed.
National Historic Preservation Act	16 USC 470 et seq; 36 CFR Part 800.4 – 8; 800.10	Provides for the protection of sites with historic places and structures	Substantive requirements applicable if eligible resources are identified within the area to be disturbed.
Archeological Resources Protection Act of 1979	16 USC Sections 470cc (b), (c), ; 43 CFR Part 7.4, and 7.7	Prohibits removal of or damage to archaeological resources unless by permit or exception	Substantive requirements applicable if eligible resources are identified within the area to be disturbed.
American Indian Religious Freedom Act	42 USC Section 1996 et seq.	Protects religious, ceremonial, and burial sites, and the free practice of religions by Native American groups.	Substantive requirements applicable if Native American sacred sites are identified within the area to be disturbed.
Action-Specific ARARs			
RCRA	40 CFR. Part 262 Subpart B, & Part 263 Subparts B and C	Establishes responsibilities for transporters of hazardous waste in handling, transportation, and management of the waste. Sets requirements for manifesting, recordkeeping, packing, labeling, and emergency response action in case of a spill.	Applicable depending on waste classification and if it is transported offsite for disposal.

ARARs/TBCs	Citation or Reference	Requirements	Applicability
RCRA Land Disposal	40 CFR Part 268.32, 34-37, and subpart D,	LDRs: Establishes restrictions on land disposal unless treatment standards are met or a "no migration exemption" is granted. LDRs establish prohibitions, treatment standards, and storage limitations before disposal for certain wastes as set forth in Subparts C and D. Treatment standards are expressed either as concentration-based performance standards or as specific treatment methods. Wastes must be treated according to the appropriate standard before wastes or the treatment residuals of wastes may be disposed in or on the land. The Universal Treatment Standards establish a concentration limit for 300 regulated constituents in soil regardless of waste type.	Applicable for disposal of hazardous wastes, if the site soil is characterized as such.
Transportation	49 CFR. Part 171 Subparts A & B	Hazardous materials that may be transported offsite cannot be transported in interstate and intrastate commerce, except in accordance with the requirements of 49 CFR Part 171, Subpart C.	Applicable as any offsite transportation of hazardous waste will comply with these regulations, which involve packaging, placarding, labeling, and other shipping requirements.
Criteria for Classification of Solid Waste Disposal Facility and Practices	40 CFR 257.3	Sets standards for land disposal facilities for nonhazardous waste.	Applicable to transport and disposal of any nonhazardous waste offsite.
Hazardous Waste Management; Standards Applicable to Generators of Hazardous Waste; and Standards Applicable to Transporters of Hazardous Waste	OAC 252:205 – Oklahoma Hazardous Waste Management Rules Sections 5-5, 9-3 & 9-4	Regulates the generation, transport, storage, treatment, and disposal of hazardous wastes generated in the course of a remedial action. Regulates the construction, design, monitoring, operation, and closure of hazardous waste facilities.	Requirements under these regulations may be relevant and appropriate to transportation and disposal of wastes.
Solid Waste Management	OAC 252:515-5, 515-7-1, 515-9-1, 515-11 – 13, & 515-31	Implements the OSWMA, which provides rules for the transportation, handling, storage, and/or disposal of solid waste regulated by the OSWMA.	The requirements are applicable to the transportation, handling, storage, and/or disposal of any solid wastes generated during remedial action.
Well Driller and Pump Installer Licensing	OAC 785:35	Establishes requirements for well drilling and plugging.	Potentially applicable if installation or plugging and abandonment of groundwater monitoring wells or boreholes takes place.

ARARs/TBCs	Citation or Reference	Requirements	Applicability
Endangered Species Act of 1973	16 USC 1533-; 50 CFR 17.11-12; 17.51-52; 17.61-62; and 17.71-72	Requires remedial agency to consult with Fish and Wildlife Service if action may affect endangered species or critical habitat. Requires action to conserve endangered species within critical habitats upon which endangered species depend; includes consultation with Department of Interior.	No documentation is found to show endangered species are present at the site; however, it is TBC to confirm that determination during the soil remediation.
TBCs			
Floodplain Management	Executive Order 11988	Establishes federal policy and guidance for activities completed in floodplains	TBC since portions of the site are within a 100-year floodplain.
Protection of Wetlands	Executive Order No. 11990	Mandates that Federal agencies and potentially responsible parties avoid, to the extent possible, the adverse impacts associated with the destruction or loss of wetlands and avoid support of new construction in wetlands if a practicable alternative exists.	TBC during remedial actions since portions of the site are within or near wetlands.

Notes:
ARAR = Applicable Relevant and Appropriate Requirement.
BMP = Best Management Practice.
CERCLA = Comprehensive Environmental Response, Compensation, and Liability Act.
CFR = Code of Federal Regulations.
ELV = Estimated Limit Value.
LDR = Land Disposal Restriction.
OAC = Oklahoma Administrative Code.
OSWMA = Oklahoma Solid Waste Management Act.
RCRA = Resource Conservation and Recovery Act.
TBC = To be considered.
TLV = Threshold Limit Values.
USC = U.S. Code.

Table 5-1. Technology Screening for Soil

General Response Action	Remedial Technology Type	Process Option	Description	Effectiveness	Implementability	Cost	Potential for Retain for Further Evaluation
No Further Action	None	None	No further action to address contaminated soil.	Will not address the remedial objectives.	None	None	Yes as baseline for evaluation process
Institutional Controls	Access and Use Restrictions	Land Use Controls	Land use restriction (i.e., deed notice or restrictive covenant) is issued for properties located in the contaminated areas.	Will minimize direct exposure to the contaminants; therefore it will address remedial objectives partially. The current and future land use of the site is residential; residential, industrial, and commercial are potential uses for the Wilcox Process Area.	Implementable	Low	**Yes**
Containment	Consolidation and Capping	Clay Cap, Synthetic Membrane, or Chemical Sealant or Stabilizers	A cap is installed to cover the contaminated area to prevent direct exposure to the contamination. Different materials can be used for the cap and typical materials include clay, synthetic membranes, and chemical sealants or stabilizers. Contaminated soil can be consolidated in one area and capped.	Will prevent direct contact and exposure to the contaminated soil, although it does not remove the source of the contamination. It will address the relevant remedial objectives.	Implementable with commercially available equipment; potential worker and community exposure to dust; institutional controls will be required to protect the cap.	Medium	**Yes**
Removal	Excavation and Disposal	Excavation and Onsite Disposal	Contaminated soil is excavated and placed in a containment repository, which may consist of a bottom liner and a cap. Bottom liner may consist of, from bottom to top a impermeable liner, leachate collection layer, a protection layer overlain by excavated contaminated soil. A cap may consist of an impermeable layer, an infiltration collection layer, and soil cover and vegetation.	Will prevent direct contact and exposure to the contaminated soil by containing the contaminated materials in a repository. It will address the relevant remedial objectives.	Implementable with commercially available equipment. Potential worker and community exposure to dust during the construction, therefore dust controls will be required. Institutional controls are required to control the future land use and protect the integrity of the containment repository.	Medium	**Yes**
		Excavation and Offsite Disposal	Contaminated soil are excavated and transported to a permitted offsite facility for disposal.	Will remove the contaminated soil from the site. It will address the relevant remedial objectives.	Implementable. Potential worker and community exposure to dust during the construction and transportation for offsite disposal, therefore dust controls will be required.	Medium	**Yes**
Treatment	*In Situ* Physical, Chemical Treatment	Stabilization/Solidification	Reagents are mixed with soil to trap, treat, or immobilize contaminants. Treatment would stabilize and prevent contaminants leaching to the groundwater. Reagents may include Portland cement, bentonite, fly ash, organoclay, and activated carbon.	Will stabilize and reduce contaminants' migration, treated soil will remain onsite; administrative controls and land use restrictions will be required.	Implementable with commercially available equipment; treatability studies are required; and potential worker exposure to contaminants is present during mixing.	High. The contaminated soil is likely not hazardous, therefore the treatment is less cost effective compared to containment technologies.	No, due to high cost and lower benefit of treating the soil compared to containment technologies.
	Biological	Landfarming	Landfarming is used for the biological treatment of contaminated soil. It consists of spreading excavated contaminated soil either directly on the ground or on a membrane with an upper protective layer to prevent contaminants from migrating to the soil underneath and to the groundwater. Mixing or tilling of the contaminated soil is normally required to blend nutrients/amendments, and distribute moisture to promote biodegradation of the contaminants. Periodical watering is also required to provide optimal condition for microbial activities.	Landfarming is typically applicable to nonvolatile and semi-volatile compounds. Biodegradation of PAHs becomes more difficult as the number of aromatic rings increase. Therefore landfarming typically is not considered to be effective for treating PAHs that contain more than four rings, i.e., benzo(a)pyrene. It is not certain if landfarming will be effective for treating lead in soil with data currently available.	Implementable, however it may take a long period of time depending on biodegradation process in the soil.	Low	No due to ineffectiveness with inorganics
		Phytoremediation	Phytoremediation is a process that uses plants to remove, transfer, stabilize, and destroy contaminants in soil and sediment. The mechanisms of phytoremediation include enhanced rhizosphere biodegradation, phyto-extraction (also called phyto-accumulation), phyto-degradation, and phyto-stabilization.	Under controlled experimental settings, a variety of plants have been shown to remediate both lead and benzo(a)pyrene in surface soil. Treatability and pilot studies would be required to determine the effectiveness of phytoremediation at the site.	Technology is potentially implementable with pilot study. However, climate, site soil type, and / or lithology characteristics may not be conducive to needed plant/tree species. Limited species are effective with metals. It may also require a long period of time compared to other technologies depending on season and temperature.	Medium	No due to the concern on implementability

Table 5-1. Technology Screening for Soil

General Response Action	Remedial Technology Type	Process Option	Description	Effectiveness	Implementability	Cost	Potential for Retain for Further Evaluation
Treatment	*Ex situ* Physical, Chemical Treatment	Excavation and Chemical Oxidation	Oxidizing agents (Fenton's reagent, permanganate, and ozone) are added into the excavated soil to promote abiotic destruction of contaminants.	Chemical oxidation will make lead and other metals become soluble, potentially causing mobilization of metals to groundwater.	Implementable	High. Can be cost prohibitive if the soil contains high organic matter.	No, due to the concern for mobilizing lead to groundwater and high cost.
		Excavation and Soil Mixing and Stabilization/Solidification	Reagents are mixed with excavated soil by a mechanical mixing device to trap, treat, or immobilize contaminants. Treated soil may be placed onsite for future applicable land use. Reagents may include Portland cement, bentonite, fly ash, organoclay, and activated carbon.	Will stabilize and reduce contaminants' migration, treated soil will remain onsite; administrative controls and land use restrictions will be required.	Implementable with commercially available equipment; treatability studies are required; and potential worker exposure to contaminants is present during excavation and mixing.	High. The contaminated soil is likely not hazardous, therefore the treatment is less cost effective compared to containment technologies.	No, due to high cost and lower benefit of treating the soil compared to containment technologies.
		Excavation and Soil Washing	Contaminants in soil are desorbed by using a solution of leaching agent, surfactant, pH-adjustment, or chelating agent to help remove the contaminants and fine materials on which the contaminants absorbed.	Will address the remedial objectives by removing the contaminants from the soil .	Complex process and produce a large quantity of process water that requires treatment. Acid reagent may be used to remove lead from soil, which increase the health and safety concern during the implementation.	High	No due to the concern on implementability.
		Excavation and Thermal Treatment	Heat is applied to the excavated soil to increase the volatility of the contaminants. An off-gas treatment will be used to treat the volatilized contaminants. *Ex situ* thermal treatment technologies include hot gas decontamination, incineration, thermal desorption, and vitrification, which use a high temperature to immobilize contaminants and produce non-toxic vitreous stabilized products.	Will destroy or remove and recover the contaminants, so it will address the remedial objectives.	Not readily implementable, treatability studies required; significant materials handling; specialized equipment and operators; extended construction/ treatment period (6-7 months); and viscous nature may require pre-treatment. If treated soil is placed onsite, beneficial use of the treated soil shall be studied for future land use, and institutional controls may be required.	High; not cost effective for the relatively low concentrations of the contaminants at the site.	No, due to complex implementation and cost.

Notes:
PAH = Polycyclic aromatic hydrocarbon

Table 6-1. Summary of Soil Alternatives

Alternative	Remedy Components			Remedial Action Objectives	
	Primary Technologies	Disposal	Institutional Controls	Prevent human exposure to the soils with concentrations of the COCs exceeding the PRGs.	Minimize and prevent migration of soil contaminants into the groundwater, surface water, and other site soils.
S-2	• Excavation • Backfill of excavation • Transportation of the soils offsite	Offsite RCRA Subtitle D Landfill	Land use restriction to industrial and commercial in the south of the Wilcox Process Area, but may be considered for residential	Prevent human exposure to the soils and prevent migration of the soil contaminants by removing the contaminated soil and disposing in a permitted landfill.	
S-3	• Excavation • Backfill of excavation • Construction of an onsite containment repository and placement of the excavated soil in the repository	Onsite containment repository	• Land use restriction to industrial and commercial in the south of the Wilcox Process Area, but may be considered for residential • IC to protect the integrity of the repository	Prevent human exposure to the soils and prevent migration of the soil contaminants by removing the contaminated soil and disposing in an onsite containment repository.	
S-4	• Excavation • Backfill of excavation • Consolidation and capping of the excavated soil onsite	Onsite capping	• Land use restriction to industrial and commercial in the south of the Wilcox Process Area, but may be considered for residential • IC to protect the integrity of the cap	Prevent human exposure to the soils and minimize migration of the soil contaminants by consolidating and capping the contaminated soil onsite.	

Notes:
COC = Chemical of concern
IC = Institutional control
PRG = Preliminary remediation goal
RCRA = Resource Conservation and Recovery Act

TABLE 7-1
EVALUATION OF SOIL REMEDIAL ALTERNATIVES

Evaluation Criteria	S-1 - No Further Action	S-2 - Soil Excavation and Offsite Disposal	S-3 - Soil Excavation and Onsite Containment Repository	S-4 - Soil Excavation, Onsite Consolidation, and Capping
1. Overall Protection of Human Health and the Environment				
How Alternative Provides Human Health and Environmental Protection	This alternative would not be protective of human health or the environment.	This alternative would protect human health and the environment by removing the contaminated soil from the site and transporting and disposing of it in an offsite permitted facility.	This alternative would protect human health and the environment by containing the contaminated soil in a containment repository constructed onsite.	This alternative would protect human health and the environment by consolidation and capping of the contaminated soil.
2. Compliance with ARARs				
Compliance with ARARs	No Action, so no rules apply.	Yes	Yes	Yes
3. Long Term Effectiveness and Permanence				
a. Magnitude of Residual Risk	Not applicable.	This alternative would permanently eliminate the risks and exposure to the soil contaminants from the site.	Once remediation is complete, because the contaminated soil still remains onsite, although contained, institutional controls and monitoring will be implemented to protect the remedy. Therefore, the residual risk would be low.	Similar to Alternative S-3, because the contaminated soil still remains onsite, although capped, institutional controls and monitoring will be implemented to protect the remedy. Therefore the residual risk would be low. Groundwater monitoring will confirm the capped contaminated soil does not leach to the groundwater.
b. Adequacy and Reliability of Controls	Not applicable.	Removal of COC-impacted soil would be a permanent solution with long-term effectiveness.	Containment of COC-impacted soil with monitoring and institutional controls of the containment would be reliable to ensure long-term effectiveness of the remedy.	Consolidating and capping COC-impacted soil with monitoring and institutional controls of the cap would be reliable to ensure long-term effectiveness of the remedy.
4. Reduction of Toxicity Mobility, and Volume Through Treatment				
a. Treatment Process Used and Materials Treated	Not applicable.	This alternative involves no treatment processes.	This alternative involves no treatment processes.	This alternative involves no treatment processes.
b. Amount of Hazardous Materials Destroyed or Treated	Not applicable.	The COCs will not be destroyed or treated.	The COCs will not be destroyed or treated.	The COCs will not be destroyed or treated.
c. Degree of Expected Reductions in Toxicity, Mobility, and Volume	Not applicable.	This alternative will reduce toxicity, mobility, and volume of the COCs with respect to onsite conditions because the contamination will be physically removed from the site, not treated.	This alternative will reduce mobility of the COCs with respect to onsite conditions because the contamination will be physically removed and placed in a containment/capped area. The toxicity and volume remain unchanged.	This alternative will reduce mobility of the COCs with respect to onsite conditions because the contamination will be physically removed and placed in a containment/capped area. The toxicity and volume remain unchanged.
d. Degree to Which Treatment is irreversible	Not applicable.	No treatment processes are used under this alternative.	No treatment processes are used under this alternative.	No treatment processes are used under this alternative.
e. Type of Residuals Remaining After Treatment	Not applicable.	No treatment processes are used under this alternative.	COC-impacted soil will remain onsite after remedial action.	COC-impacted soil will remain onsite after remedial action.

Evaluation Criteria	S-1 - No Further Action	S-2 - Soil Excavation and Offsite Disposal	S-3 - Soil Excavation and Onsite Containment Repository	S-4 - Soil Excavation, Onsite Consolidation, and Capping
5. Short Term Effectiveness				
a. Protection of Community During Remedial Actions	Not applicable.	There would be some short term risk to the community during excavation and transportation of contaminated soil (i.e., dust generation and trucks transporting waste from the site).	There would be some short term risk to the community during excavation and transportation of contaminated soil (i.e., dust generation and trucks transporting waste from the site).	There would be some short term risk to the community during excavation and transportation of contaminated soil (i.e., dust generation and trucks transporting waste from the site).
b. Protection of Workers During Remedial Actions	Not applicable.	Implementation of this alternative would pose a minimal risk to remedial workers or the environment as long as proper health and safety procedures are followed.	Implementation of this alternative would pose a minimal risk to remedial workers or the environment as long as proper health and safety procedures are followed.	Implementation of this alternative would pose a minimal risk to remedial workers or the environment as long as proper health and safety procedures are followed.
c. Environmental Impacts	Not applicable.	Engineering and administrative controls during excavation and removal activities would minimize impacts to the environment. Stormwater pollution prevention procedures will be established to prevent the surface water from being impacted.	Engineering and administrative controls during excavation and removal activities would minimize impacts to the environment. Stormwater pollution prevention procedures will be established to prevent the surface water from being impacted.	Engineering and administrative controls during excavation and removal activities would minimize impacts to the environment. Stormwater pollution prevention procedures will be established to prevent the surface water from being impacted.
d. Time Until Remedial Action Objectives are Achieved	No RAOs achieved.	Excavation and offsite disposal can be achieved in a very short time frame, typically 6 months to a year.	Excavation and onsite containment repository can be achieved in a relatively short time frame, typically 6 months to a year.	Excavation and onsite capping can be achieved in a relatively short time frame, typically 6 months to a year.
6. Implementablility				
a. Ability to Construct and Operate the Technology	Not applicable.	Removal of soil is easily implemented with conventional construction equipment, and no specialized work force is required.	Removal of soil and containment is easily implemented with conventional construction equipment, and no specialized work force is required.	Removal of soil and capping is easily implemented with conventional construction equipment, and no specialized work force is required.
b. Reliability of the Technology	Not applicable.	Excavation under this alternative is a widely proven technology that is reliable at removing COCs.	The technologies used in this alternative, excavation and capping, are reliable; and quality control and quality assurance for containment construction shall be followed to protect the remedy reliability.	The technologies used in this alternative, excavation and capping, are reliable; and quality control and quality assurance for containment construction shall be followed to protect the remedy reliability.
c. Ease of Undertaking Additional Remedial actions, if Necessary	Not applicable.	Additional remedial actions would be easily implemented if needed under this alternative (i.e., additional excavation).	Additional remedial actions would be easily implemented if needed under this alternative (i.e., additional excavation), and revised design may be required.	Additional remedial actions would be easily implemented if needed under this alternative (i.e., additional excavation).
d. Ability to Monitor Effectiveness of Remedy	Not applicable.	Confirmation samples will be easy to collect to ensure complete removal of the contaminated soil.	The effectiveness of soil excavation and containment will be easily monitored. Activities include confirmation sampling during the excavation and groundwater monitoring and periodical inspection of the repository.	The effectiveness of soil excavation and capping will be easily monitored. Activities include confirmation sampling during the excavation and groundwater monitoring and periodical inspection of the cap.
e. Ability to Obtain Approvals from Other Agencies	Not applicable.	Approvals from other agencies would likely be obtained.	Approvals from other agencies would likely be obtained.	Approvals from other agencies would likely be obtained.
f. Availability of Offsite Treatment, Storage, and Disposal Services and Capacity	Not applicable.	Offsite disposal is readily available for soil disposal.	Not required.	Not required.
g. Availability of Necessary Equipment and Specialists	Not applicable.	Equipment necessary to implement this remedy is readily available; no specialized equipment is required.	Equipment necessary to implement this remedy is readily available; no specialized equipment is required.	Equipment necessary to implement this remedy is readily available; no specialized equipment is required.
h. Availability of Prospective Technologies	Not applicable.	The technology is readily available.	The technology is readily available.	The technology is readily available.
7. Cost				
A. Total Present Worth Value	**$0**	**$3,484,412.49**	**$6,592,303.22**	**$4,809,892.62**

Notes:
ARAR = Applicable or relevant and appropriate requirement.
COC = Contaminant of concern.
RAO = Remedial Action Objective.
O&M = Operation and maintenance.

RE: Responses to Comments on the Soil Feasibility Study Report, Revision 02
Wilcox Oil Company Superfund Site
Remedial Investigation/Feasibility Study
Remedial Action Contract 2
Contract: EP-W-06-004
Task Order: 0128-RICO-06GG

Dear Ms. Higgins-Coltrain:

EA Engineering, Science, and Technology, Inc., PBC (EA) has prepared the following responses to comments on the Soil Feasibility Study Report, Revision 02. Comments from EPA were received on 18 May 2021.

EPA Comments Received via Email on 18 May 2021

1. *2.7.2 Data Grouping and COPC Identification: It is stated that the California EPA risk-Based Screening levels were used. The EPA human Health regional screening levels (generic) were used. Please remove 'California'.*

   EA Response: The text has been revised to state that the EPA Human Health Regional Screening levels were used. The appropriate reference was also included.

2. *Figure 2-6: please revise to include all ROD areas or just use the figure from the Source ROD.*

   EA Response: Figure 2-6 has been revised to include all ROD areas.

3. *4.3, last paragraph: volume difference between residential and commercial/industrial is listed as 4,275 while section 4.5.2 lists the difference as 4,646. Please revise to the correct amount. Additionally, this may not be correct depending on the change made related to figures 2-8/2-9 and the volumes reported in 4.5.2.*

   EA Response: The volume numbers have been revised according to the changes to Figures 2-8, 2-9, and 2-11. More information about these changes can be seen in Comment #5.

4. *4.5.2: The table shows one of the industrial/commercial areas to be 110,441 and Figure 2-8 shows this to be 110,416. Please revise to the correct volume, which will also impact the rest of the table values and values listed in the text. OR, this will only cause the figure to be revised.*

   EA Response: The volume numbers have been revised according to the changes to Figures 2-8. More information about these changes can be seen in Comment #5.

5. *Figures 2-8 and 2-9*

   - *The areas along the RR-tracks appear to show the same sample exceedances, so why are the calculated volumes different?*

     EA Response: The exceedances near the railroad tracks in Figure 2-8 and 2-9 have been rechecked. After confirming the exceedances, the shapes and values of those areas were updated in Figures 2-8, 2-9, and 2-11.

   - *2-9: there appears to be an X exceeding the PRG but not included within the excavation volume boundary.*

     EA Response: Figure 2-9 has been edited to include the exceedance.

   - *2-9: change the title from 'industrial areas' to 'residential area'. This figure shows all of wilcox as residential.*

     EA Response: The title was not edited to avoid any further confusion. The industrial and residential areas are properly delineated. The use of residential or industrial PRG criteria are also properly referenced. These distinctions help explain the current use of the areas and the reason behind the PRG criteria that were applied.

6. *Figure 2-11*

   - *change the title from 'industrial areas' to 'residential area'. This figure shows all of wilcox as residential.*

     EA Response: The title was not edited to avoid any further confusion. The industrial and residential areas are properly delineated. The use of residential or industrial PRG criteria are also properly referenced. These distinctions help explain the current use of the areas and the reason behind the PRG criteria that were applied.

   - *Revise the text box to match the text in section 4.5.4.*

     EA Response: The text box has been revised to appear similar to the one in section 4.5.4.

7. *Table 7-1 is missing.*

   EA Response: Table 7-1 had been included.

8. *Cost Summary: Is this Table 7-1?*

   - *ICs and 5-yr reviews should not be included for S-2.*

   EA Response: Institutional Controls (ICs) and five-year reviews have been removed from Alternative S-2. Table 7-1 has also been attached.

9. *HH PRG Memo: If the memo was updated then it should be dated appropriately and the FS scoping meeting footer should be removed. Please update the memo with the updated date and document revision number*

   EA Response: The dates and document revision numbers have been revised in the PRG Memo.

10. *General: be mindful that any alterations of the volumes will require text edits throughout Section 6 and the cost estimates. Edits to cost estimate then affect text in same section.*

    EA Response: The volume numbers have been revised and have been changed to reflect the new volumes resulting from changes to Figures 2-8, 2-9, and 2-11. The cost estimate has also been edited to reflect these changes.

1. INTRODUCTION

This Technical Memorandum presents the procedures, analyses, and results for the groundwater sampling, surface waste sampling, surveying, and aquifer testing conducted by EA Engineering, Science, and Technology, Inc., PBC (EA) at the Wilcox Oil Company Superfund Site (site) (Figure 1) during the period of 10 August 2020 through 20 August 2020. This work was conducted for the U.S. Environmental Protection Agency (EPA) under Remedial Action Contract No. EP-W-06-004 (Task Order No. 0128-RICO-06GG).

1.1 PURPOSE

Groundwater sampling was conducted at existing wells and at new, temporary, locations to further delineate possible contaminant plumes at the Wilcox Process Area (WPA) and the Lorraine Process Area (LPA) (Figure 2). Surface waste samples were collected from known locations of contamination to determine toxicity and ecologic threat (Figure 2). Aquifer tests were performed at existing monitoring wells to determine site-specific hydraulic parameters necessary for developing groundwater models to evaluate remedial options for aquifer restoration. Groundwater levels in existing monitoring wells were gauged and a survey of Sand Creek was conducted to establish static water level and investigate possible communication between the groundwater and creek. This document will be used to supplement the Remedial Investigation and Feasibility Study reports.

1.2 PREPARATION ACTIVITIES

In preparation for and prior to conducting field activities, the necessary clearance of vegetation around existing monitoring wells and temporary groundwater sampling locations was performed.

1.3 CHRONOLOGY OF FIELD ACTIVITIES

The following field activities were conducted from 10 August 2020 through 20 August 2020:

Day	Date	Activities
Monday	10 August 2020	Mobilize to the site. Clear vegetation in order to access monitoring wells and hydro-punch sample locations.
Tuesday	11 August 2020	Hydro-Punch and sample WPA-GW-02. Sample MW-04 and MW-01.
Wednesday	12 August 2020	Perform survey of Sand Creek. Install all temporary wells. Sample MW-03 and MW-05.
Thursday	13 August 2020	Sample temporary wells. Sample MW-02 and MW-06.
Friday	14 August 2020	Sample temporary wells.
Monday	17 August 2020	Slug test MW-04 and MW-05.
Tuesday	18 August 2020	Sample GW-13-119. Slug test MW-01 and MW-06. Bail down test MW-03. Collect surface waste samples.

Wednesday	19 August 2020	Bail down/pump down test MW-02. Collect surface waste samples.
Thursday	20 August 2020	Sample GW-13-195. Collect surface waste samples. Demobilize.

2. FIELD ACTIVITIES

2.1 SAND CREEK SURVEY

Surface water elevations were recorded at five locations in Sand Creek along the southern edge of the LPA and the WPA (Figure 3). Surface elevations were recorded using a Global Navigation Satellite System (GNSS) receiver. The location and frequency of the points collected was limited due to poor satellite reception, as tree coverage impeded the devices ability to continuously record data. To investigate possible communication between the site groundwater and Sand Creek, groundwater elevations in the six existing monitoring wells (MW-01 through MW-06) were measured by electronic sounder prior to conducting groundwater sampling (Table 1).

2.2 AQUIFER TESTING

Single-well slug tests were conducted on two-inch monitoring wells MW-01, MW-04, MW-05 and MW-06. The "slug" utilized for these tests was a weighted polyvinyl chloride (PVC) rod with a volume of 0.22 gallons (gal). During each test, water-level rise during the "slug in" and water level recovery after the "slug out" was monitored using data-logging pressure transducers (automated) and, when possible, using a water level indicator (manually) as back up. The transducers were placed in each well prior to the start of each test, being set and securely supported near the bottom of the well. The transducers were capable of measuring water levels to within an accuracy of 0.01 foot (ft).

Bail down tests were conducted on wells MW-02 and MW-03 due to insufficient amount of water necessary to conduct a slug test. The wells were manually bailed dry and then allowed to recover with an automated data-logging transducer recording the resulting water level rise. The transducers were placed in each well prior to the start of each test, being set and securely supported near the bottom of the well. The transducers were capable of measuring water levels to within an accuracy of 0.01 ft.

The transducers were calibrated against the water level as measured from the top of casing with the electric sounder, and the data logger was set to record water level measurements at an interval appropriate for analysis. The slug was placed approximately three feet below the static water level and water levels were recorded manually and with the transducers. The slug was not pulled out of the well until the water level had recovered sufficiently (98% of the static water level or greater) from the "slug in" aspect of the test.

Data recorded during the tests included clock time, elapsed time since placement/removal of the slug, depth to water, and the maximum displacement that occurred during each test. As determined using transducer data, displacement was utilized in the 95% recovery determination during each test. Data was downloaded from the transducer at the end of both the placement and removal of the slugs using WinSitu® Software, version 5.6.25.0. Attachment 1 presents the slug test analyses and plots.

2.3 GROUNDWATER SAMPLING OF EXISTING WELLS

Groundwater samples were collected from six existing monitoring wells (MW-01 through MW-06) along with both the upper and lower screen intervals of GW-13 (119 and 195 ft below ground surface [bgs]) (Figure 2). Groundwater samples were collected via the low flow sampling technique. The wells were sampled post stabilization of water quality parameters for the analysis of volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), polycyclic aromatic hydrocarbons (PAHs), total and dissolved target analyte list (TAL) metals (including mercury), and monitored natural attenuation (MNA) parameters.

Prior to purging and sampling, groundwater levels were measured with a water level indicator or interface probe (Table 1). In well MW-04, an interface probe was used to measure approximately 0.15 feet of light non-aqueous phase liquid (LNAPL). A hydrocarbon odor was noted at MW-02 and MW-03; however, no LNAPL was detected with an interface probe. Field documentation for parameter stabilization and sampling of well locations is presented in Attachment 2.

2.4 GROUNDWATER SAMPLING VIA HYDRO-PUNCH AND TEMPORARY WELLS

Initially, hydro-punch technology (using a four-foot stainless steel screen advanced by direct push technology [DPT] to sample groundwater) was to be used at all groundwater collection points outside of existing, cased wells. This method was used to sample groundwater at WPA-GW-02, taking approximately four hours to advance the screen and collect the sample. It was decided that this method of sample collection was inefficient and that temporary monitoring wells would be installed at the remaining pre-determined sample locations. Shallow refusal along with physical inaccessibility issues required the proposed well locations to be adjusted and ultimately prevented the installation of multiple planned sample locations; nine of eleven identified locations were able to have temporary wells successfully installed (Figure 2):

- LPA-GW-01, -02, and -03
- WPA-GW-01, -04, -05, -06, -07, and -09

Wells WPA-GW-03 and WPA-GW-08 were not installed due to refusal during drilling. Well WPA-GW-05 was located approximately 25 feet from well WPA-GW-08 resulting from efforts to establish a temporary well in an area that was continually met with refusal.

Temporary monitoring wells were installed via the DPT drilling method. As drilling advanced, soil core was continuously collected in clear PVC sleeves. The field geologist logged the soil core in accordance with the Unified Soil Classification System. Soil color was determined using a Munsell Color Chart. During logging, the field geologist made olfactory and visual observations, and recorded these data on boring log forms (Attachment 3). The temporary wells were constructed with one-inch diameter Schedule 40 PVC flush thread joint casing, and ten feet of Schedule 40 PVC 0.010-inch machine slotted screen. No filter pack or bentonite seal was placed in the annulus. A one-inch well cap was placed on top. Due to the low permeability of the aquifer, groundwater did not readily enter the well. As a result, the wells could not be developed, however groundwater samples were collected. After the wells were sampled, at the direction of EPA, the temporary wells were left in place.

During installation, hydrocarbon product staining was observed in the sample cores of WPA-GW-05, 06, 07, 09 and LPA-GW-01. Product observed was black to grey with a strong hydrocarbon odor accompanied by a visible sheen and free non-aqueous phase liquid (NAPL). Field boring logs are presented in Attachment 3. Table 2 summarizes all soil borings that have occurred at the site. Table 1 summarizes all monitoring and temporary wells installed at the site.

Groundwater samples were collected from temporary wells using a peristaltic pump and after a single preliminary reading of water quality parameters rather than after low-flow stabilization. This was due to the slow recharge rate and limited hydraulic production of the temporary wells along with the inability to measure the water level within the well due to the small diameter well casing (one-inch) used. Temporary wells WPA GW-01, 04, and 06 had notably slow recharge rates and were sampled over a 24-hour period in order to satisfy sample volume requirements. WPA-GW-05 and LPA-GW-03 were both advanced to refusal with screened casing installed but were insufficiently deep to allow groundwater incursion into the borehole. All samples collected from hydro-punch and temporary wells were submitted for analysis of VOCs, SVOCs, PAHs, total and dissolved TAL metals (including mercury), and MNA parameters. Field documentation for sampling of well locations is presented in Attachment 2.

2.4.1 Evaluation of Hydrocarbons in Temporary Wells

During installation of temporary monitoring wells, soil cores were collected and logged with depth and nature of any visible hydrocarbon contamination noted. The following temporary well locations displayed noticeable evidence of contamination:

> **WPA-GW-05:** Tar sand mixture at 6 to 8 ft bgs. Black product present from 11 to 16 ft bgs. This temporary well did not have groundwater incursion and was not sampled.
>
> **WPA-GW-06:** Tar and petcoke on the surface down to approximately 1 ft bgs. Product was present from 8 to 9 feet with fine stringers product present within the last 3-inches. When groundwater was sampled from this location, visual confirmation of light and heavy hydrocarbons was noted.

WPA-GW-07: Hydrocarbon product detected in clay at 13 to 17 ft bgs. LNAPL (black product) noted at 22 to 24 ft bgs. A very noticeable hydrocarbon odor was noticed during sampling.

WPA-GW-09: Hydrocarbon black product, sheen and odor detected from 9 to 15 ft bgs.

LPA-GW-01: Product observed at 7 to 9 ft bgs and again at 12 to 14 ft bgs.

Figure 4 displays the distribution of hydrocarbon sheen and product identified in these temporary monitoring well soil borings as well as from prior assessments of soil samples and monitoring wells in the WPA and the LPA. Table 2 describes the locations and description of NAPL/product present in each borehole installed at the site.

2.5 SURFICIAL WASTE VISUAL LOCATION AND SAMPLING

Surface waste samples were collected from previously noted areas of the WPA, LPA, East Tank Farm (ETF), North Tank Farm (NTF) and Loading Dock Area (LDA) where there was clear indication of surface staining or apparent solid waste (Figure 2). Samples were collected slightly below the surface to account for physical weathering and ultraviolet degradation that would impede accurate analysis of the material. Samples were analyzed for SVOCs, PAHs, and TAL metals (including mercury). Field forms are provided in Attachment 2 and laboratory analytical results are provided in Attachment 4. In addition to surface waste sample collection, both WPA and LPA were visually assessed for surface waste.

3. RESULTS

3.1 SAND CREEK SURVEY

Based on the survey data, the average surface water elevation along Sand Creek and south of the LPA and the WPA is approximately 767.0 feet above mean sea level (Figure 3). The surface water elevation decreases with the direction of flow, from north to south, at a gradient of approximately 0.002 foot per foot. Groundwater elevations measured in existing monitoring wells show site groundwater flow to be towards Sand Creek. There is an approximately 7 to 8-foot difference in elevation between the groundwater elevation and Sand Creek, and it appears groundwater is moving through soil perched on bedrock, where it discharges as seepage faces on the streambank. This flow is ephemeral in response to precipitation, infiltration, recharge, and groundwater movement. Much of the year the seeps are dry. The elevated iron in groundwater (as discussed in Sections 3.3 and 3.4) is oxidized by iron oxidizing bacteria at these seepage faces creating a visible iron red gelatinous slime. The rate of seepage does not appear to form a significant volumetric discharge of groundwater to surface.

This information combined with sediment and surface water results collected during the Remedial Investigation further confirm the conclusions of the Human Health Risk Assessment (HHRA). Sediment and surface water samples collected during the RI indicate that there has not

been appreciable impact to Sand Creek downstream of the WPA (EA 2020). The HHRA (EA 2020) concluded that there are no potential human health concerns for exposure to surface water and sediment within Sand Creek. Chemicals in sediment and surface water may pose a risk to aquatic and benthic organisms in Sandy Creek (total PAHs and manganese) (EA 2020).

A discussion of hydraulic conductivity, movement of groundwater, and potential discharge to Sand Creek is provided below.

3.2 SLUG TEST RESULTS

Data from the slug tests were analyzed using the software program AQTESOLV. Table 3 summarizes the slug test results. The Bouwer-Rice (1976) method was used for the analysis. The Bouwer-Rice method is applied to the recovery period of a well after the rapid removal of a slug of water, making it the appropriate method for the tests performed in the shallow unconfined aquifer conditions present. Note that only "slug out" data was analyzed, as the rapid removal of a slug and the subsequent recovery of the well is more appropriate for analyses in wells screened in shallow aquifers.

MW-01, displayed a hydraulic conductivity of 0.24 feet per day (ft/day) along with a transmissivity of 21.6 gal per ft/day. MW-01 has a 10-foot screen section installed from 7 to 17 ft bgs, in sandy clay above the site's predominant sandstone unit. The hydraulic conductivity and transmissivity of this well are as expected considering the height of the water column and lithology of the well.

MW-02, did not have a sufficient volume of water to perform an accurate slug test.

MW-03, did not have a sufficient volume of water to perform an accurate slug test.

MW-04, displayed a hydraulic conductivity of 0.07 ft/day along with a transmissivity of 15.1 gal per ft/day. MW-04 has a 20-foot screen section installed from 18 to 38 ft bgs, in clay and sandy clay. The hydraulic conductivity and transmissivity of this well are as expected considering the height of the water column and lithology of the well.

MW-05, displayed a hydraulic conductivity of 0.64 ft/day along with a transmissivity of 134.1 gal per ft/day. MW-05 has a 20-foot screen section installed from 17 to 37 ft bgs, in sandy clay. The hydraulic conductivity and transmissivity of this well are higher than expected when compared to MW-04, which is characteristically similar in lithology and water column height.

MW-06, displayed a hydraulic conductivity of 0.29 ft/day along with a transmissivity of 43.7 gal per ft/day. MW-06 has a 20-foot screen section installed from 30 to 50 ft bgs, in sandy clay. The hydraulic conductivity and transmissivity of this well are as expected considering the height of the water column and the lithology of the well.

The geometric hydraulic conductivity using MW-01, MW-05 and MW-06, which are considered representative of zones that transmit groundwater at the site, is 0.35 ft/day. For the measured hydraulic gradient of 0.002 ft/ft, and an assumed effective porosity of 0.2, the calculated seepage

velocity is 0.0035 ft/day, or 1.3 feet per year. If a retardation factor for benzene of 2 to 3 is assumed, benzene seepage velocity is 0.4 to 0.7 feet per year.

This minimal flux of groundwater at the site is supported by anoxic conditions which are observed in the MNA parameters, including elevated manganese and iron in groundwater which are in turn oxidized at the point of discharge on the stream banks. The Darcy velocity is only 0.007 ft/day, 0.26 ft/year. For an assumed aquifer thickness of 10 feet, the discharge at sand creek would be 260 cubic feet per year per 100 linear feet of stream bank, or 0.0037 gallons per minute (0.01 L/min). This low discharge is what is observed in seeps, and accounts for the lack of significant impacts to sediment and surface water. Petroleum constituents and metals would be oxidized at these seepage faces.

3.3 GROUNDWATER CONTAMINATION

Groundwater analytical results for VOCs, SVOCS, PAHs, and TAL metals at all sampled wells are presented in Table 4. Concentrations are shown in comparison to the EPA National Primary Drinking Water Regulation Maximum Contaminant Levels (MCLs) and Resident Tapwater Regional Screening Levels (RSLs). Figure 5 displays the analytes exceeding their respective MCL and Figure 6 displays the analytes exceeding their respective Tapwater RSL. Laboratory analytical reports are located in Attachment 4.

Benzene is the predominant VOC exceeding its MCL, with a partially defined benzene plume containing wells MW-04, WPA-GW-02, and WPA-GW-07 (Figure 5). In comparison to the MCL of 5 micrograms per liter (µg/L), the benzene concentrations for MW-04, WPA-GW-02, and WPA-GW-07 are 2,800, 1,500, and 140 µg/L, respectively. The benzene plume is not a defined upgradient of well MW-04. Other VOCs exceeding their MCLs include 1,1,2-trichloroethane, 1,2-dibromo-3-chloropropane, ethylbenzene, tetrachloroethene, and toluene; exceedances of each analyte occurred only once. Exceedances of the Tapwater RSLs occur for an additional four VOC analytes (Figure 6).

Benzo[a]pyrene exceeds its MCL in well WPA-GW-02, with a benzo[a]pyrene concentration of 0.62 µg/L in comparison to the MCL of 0.2 µg/L. No other SVOCs or PAHs exceed their MCLs. In comparison to the Tapwater RSLs, exceedances of naphthalene are prevalent (Figure 6).

For metals, total arsenic and lead concentrations commonly exceed their MCLs. Two lead plumes can be partially defined, with one containing wells LPA-GW-01 and LPA-GW-02 and the other containing wells WPA-GW-02, WPA-GW-06, WPA-GW-07, WPA-GW-09, and GW-13 (Figure 5). The greatest lead concentration of 147 µg/L was identified in well WPA-GW-06 (MCL=15 µg/L). Arsenic above the MCL is widespread and is not defined (Figure 5). An additional six metals, including iron and manganese, exceed the Tapwater RSLs (Figure 6).

3.4 GROUNDWATER MNA

To assess if NA is occurring at the site, groundwater parameters (i.e., dissolved oxygen, oxidation reduction potential) and the following groundwater analytes were analyzed: ferrous iron, total iron, total manganese, nitrate, sulfate, carbon dioxide, and methane, tables 4 and 5 present these data. Additionally, Figure 7 displays these data and Figures 8 through 12 display contoured concentrations of dissolved oxygen, total iron, total manganese, nitrate, and sulfate, respectively. It should be noted that field parameter readings from the temporary wells were collected from the first purge due to slow recharge, which was found to be turbid. Groundwater samples were field filtered only for the dissolved metals analysis. As a result, the temporary wells were not used to assess MNA.

In order to implement MNA at the site, the Oklahoma Department of Environmental Quality (ODEQ) in its MNA Guidance (ODEQ 2019) requires *"Full delineation of the contaminant plume, including sentinel wells that are below the maximum contaminant level (MCL), is needed. It must be demonstrated that conditions conductive to natural attenuation exist and attenuation is occurring. A steady or decreasing plume front must be established."* It is further recommended that *"An approved monitoring well network would normally be sampled quarterly for at least two years to establish baseline trends."* Based on this guidance, additional plume delineation, establishment of a permanent monitoring network, and additional groundwater monitoring are required.

Based on the low dissolved oxygen, low oxidation reduction potential, and the elevated manganese and iron concentrations present, particularly in wells MW-01, MW-04, and MW-05, anoxic or anerobic conditions are present within the aquifer. At MW-04, sulfate has been totally depleted indicating virtually no assimilative capacity for continued sulfate reduction; however, the presence of methane indicates that methanogenesis is ongoing. Conditions at the site are highly reducing. The carbon dioxide observed may be from methane oxidation taking place at the phreatic surface via soil gas transfer and limited infiltration of oxygenated rainfall. It is not thought that significant aerobic degradation of fuel hydrocarbons is ongoing.

To determine whether NA of benzene in groundwater is occurring at sufficient rates, additional monitoring will be required to 1) verify plume stability, 2) continue to evaluate MNA parameters and possible destruction pathways, and 3) evaluate first order decay rate of benzene. Because MW-4 contains NAPL, the decay rate may prove insufficient to result in cleanup in a timely manner. Moreover, per ODEQ MNA Guidance (ODEQ 2019), *"DEQ rarely approves MNA as a sole remedy. Source identification and removal, including free-product removal, should be parts of an overall remedy and may accelerate natural attenuation."*

Hot spot treatment of NAPL and residual NAPL (e.g., source removal) with oxidant in the MW-4 area may be required to eliminate persistent source. Then, MNA may proceed at sufficient rate to achieve to remedial action objectives for groundwater. The use of oxidant would prevent continued mobilization of reduced metals, including arsenic.

Furthermore, the groundwater results show sulfate and nitrate concentrations have been reduced which indicates overall groundwater condition is slightly reducing to moderately reducing. The reducing condition may cause metals to become dissolved and as a result, both iron and manganese have elevated concentrations.

3.5 SURFICIAL WASTE CONTAMINATION

The WPA and the LPA were assessed visually for waste present on the surface. One narrow area of surface waste was identified on the eastern side of the LPA and two areas of waste were identified within the central area of the WPA. Figure 13 shows the locations of the observed waste.

Surface waste analytical results for SVOCs, PAHs, and TAL metals at all sampled locations are presented in Table 6. Concentrations are shown in comparison to the EPA RSLs for the Resident Soil and Industrial Soil scenarios, as well as an ecological soil screening level defined as the lower value from either the Risk Assessment Information System database or the EPA Ecological Soil Screening Level. Figure 14 displays the analytes exceeding their respective Resident Soil RSL. Laboratory analytical reports are located in Attachment 4. Table 7 summarizes field observations and laboratory results from the surface waste samples collected during this event, along with test pit and waste characterization activities from prior events.

Benzo[a]pyrene exceeds its Residential Soil RSL of 0.11 milligrams per kilogram (mg/kg) in all four samples collected from the WPA, as well as one sample from the LPA and one sample from the ETF (Figure 14). The sample from WPA-SA-04 has the greatest benzo[a]pyrene concentration (390 mg/kg) and the adjacent sample WPA-SA-03 has the second greatest concentration (40 mg/kg). In the samples where the benzo[a]pyrene Residential Soil RSL is exceeded, additional PAHs (including: benzo[a]anthracene, benzo[b]fluoranthene, benzo [k]fluoranthene, chrysene, dibenz[a,h]anthracene, dibenzofuran, fluoranthene, indeno[1,2,3-c,d]pyrene, naphthalene, and pyrene) may also exceed their respective Residential Soil RSLs. No SVOCs exceed their respective Residential Soil RSLs.

Arsenic exceeds its Residential Soil RSL of 0.68 mg/kg at every sample location (Figure 14). The greatest arsenic concentration identified was 22.3 mg/kg at sample location ETF-SA-08. Lead exceeds its Residential Soil RSL of 400 mg/kg at sample location WPA-SA-04 with a concentration of 945 mg/kg.

4. SUMMARY

The following summarizes the activities and results of the August 2020 field events:

- The Sand Creek survey indicates that Sand Creek is 7 to 8 feet below the groundwater elevation, with the groundwater flow direction toward Sand Creek. Groundwater is moving through soil perched on bedrock and discharging as seepage faces on the streambank.

- The slug tests indicate that the hydraulic conductivity in the wells tested ranges from 0.07 ft/day to 0.64 ft/day and the transmissivity ranges from 15.1 gal/ft/day to 134.1 gal/ft/day.

- Benzene contamination is present in groundwater above the MCL in wells MW-04, WPA-GW-02, and WPA-GW-07. The benzene plume is not a defined upgradient.

- Arsenic is present in all wells sampled and is above the MCL, except for MW-02, MW-03, GW-13, WPA-GW-02, WPA-GW-04, WPA-GW-09. The arsenic groundwater plume is not defined.

- Lead contamination in groundwater above the MCL is present in two wells at LPA and five wells at WPA and is not defined.

- To determine whether NA is occurring in groundwater additional data is required to 1) verify plume stability, 2) continue to evaluate MNA parameters and possible destruction pathways, and 3) evaluate first order decay rate of benzene.

- Based on visual observation, there is one area of waste present at the LPA and two areas of waste at the WPA. This is in addition to the areas of waste identified during the Remedial Investigation.

- Benzo[a]pyrene is present above the Residential Soil RSL in all four surface waste samples collected from the WPA, one surface waste sample collected from the LPA, and one surface waste sample collected from the ETF. Additional PAHs are present above their Residential Soil RSLs at these locations.

- Arsenic is present above the Residential Soil RSL in all surface waste samples and lead is present above the Residential Soil RSL at WPA-SA-04.

NOTE:
[1]GW-10 was determined to contain LNAPL during geophysical logging and groundwater sampling activities conducted in September 2016. This well was plugged and abandoned in April 2017.
[2]Northing and Eastings were recorded using a Global Naviagtion Satelitte System reciever.
[3]Hydro-punch technology was used to sample groundwater at WPA-GW-02, thus no well was installed. Shallow refusal prevented the installation of wells WPA-GW-03 and WPA-GW-08.
btoc = Below top of casing.
bgs = Below ground surface.
ft = Feet.
LNAPL = Light non-aqueous phase liquid.
msl = Mean sea level.
NA = Not available.
TOC = Top of casing.

Table 2 Soil Boring Summary

Sample Location	Total Depth (ft)	Depth of Refusal (if applicable)	Lithology Encountered at Boring Termination	Groundwater Encountered?	Top of Moisture Zone (ft bgs)	Bottom of Moisture Zone (ft bgs)	Was Waste Material Encountered?	Top of Waste Material (ft bgs)	Bottom of Waste Material (ft bgs)	Description of Waste Material	Deepest Exceedance of Benzo(a)pyrene (ft bgs)	Concentration (mg/kg)	Deepest Exceedance of Lead (ft bgs)	Concentration (mg/kg)

NOTES:

[1]EPA Maximum Contaminant Levels (MCLs) and Regional Screening Levels (RSLs) for tapwater use scenario, hazard index = 1.0 for non-carcinogens and a 10^{-6} cancer risk level for carcinogens. The MCLs and RSLs for metals and dissolved metals refer to total metals.

Orange shading indicates exceedance of the associated RSL.

Green shading indicates exceedance of the associated MCL.

Blue shading indicates exceedance of both the associated RSL and MCL.

-- = No detection.

J = estimated

J- =

µg/L = Microgram(s) per liter.

NOTES:

[1]EPA Regional Screening Levels (RSLs) for resident soil and industrial soil scenarios, hazard index = 1.0 for non-carcinogens and a 10^{-6} cancer risk level for carcinogens.

[2]Ecological soil screening values are the lower of the Risk Assessment Information System database (https://rais.ornl.gov/tools/eco_search.php) or the EPA Ecological Soil Screening Level (https://www.epa.gov/chemical-research/ecological-soil-screening-level).

[a]Concentrations of benzo[b]fluoranthene and benzo[k]fluoranthene are reported together under benzo[b]fluoranthene. RSL exceedances are not assessed.

Orange shading indicates exceedance of only the associated applicable ecological soil screening value.

Green shading indicates exceedance of the associated resident soil RSL. The associated applicable ecological soil screening value may or may not be exceeded.

Blue shading indicates exceedance of the associated industrial soil RSL. The associated resident soil RSL and applicable ecological soil screening value may or may not be exceeded.

-- = No detection.

J = Estimated concentration.

J- = Estimated concentration biased low.

J+ = Estimated concentration biased high.

mg/kg = Milligram(s) per kilogram.

Table 7 Test Pit and Waste Characterization Summary Table

Test Pit/Waste Characterization Sample Location	Associated Historical Structure(s)	Waste Material Present?	If Present, Material Description	If Present, Material Smell	Was Sample Collected?	Date Collected	Sample ID	Maximum Sample Depth (ft. bgs)	Residential Soil RSL Exceedances	Industrial Soil RSL Exceedances	Estimated Square feet	Estimated Average Depth	Estimated Bank Cubic yards
LORRAINE PROCESS AREA TEST PIT LOCATIONS													
LOR-TP-01	East of Tank 42	Yes	Minor oily staining at 4 ft. bgs	No odor	No	--	--	--	--	--	1371	4	203
LOR-TP-02	East of Tank 42	No	Refusal due to sandstone at 1 ft. bgs	--	No	--	--	--	--	--	--	--	--
LOR-TP-03	East of Tank 42	No	--	--	No	--	--	--	--	--	--	--	--
LOR-TP-04	East of Tank 42	No	Refusal due to sandstone at 0.5 ft. bgs	--	No	--	--	--	--	--	--	--	--
LOR-TP-05	Tank 42	Yes	Surface crust/tar and oily staining to 6 inches bgs, red clay below	No odor noted	No	--	--	--	--	--	4675	2	346
LOR-TP-06	Tank 42	Yes	Surface crust/tar followed by oily staining down to 1.5 ft. bgs	No odor noted	No	--	--	--	--	--			
LOR-TP-07	Tank 42	Yes	Black staining to 2 ft. bgs on southwest corner of pit	No odor noted	Yes	11/8/2017	LOR-TP-07-0.5	0.5	Arsenic	--			
						11/8/2017	LOR-TP-07-2.0	2.00	Arsenic	--			
LOR-WC-01	Tanks 42; co-located with LOR-TP-07	Yes	Black staining to 2 ft. bgs on southwest corner of pit	No odor noted	Yes	11/8/2017	LOR-WC-01	0.0	Arsenic, >C12 - C28 Hydrocarbons, >C28 - C35 Hydrocarbons	>C12 - C28 Hydrocarbons			
LOR-TP-16	Tanks 40-41	No	--	--	No	--	--	--	--	--	--	--	--
LOR-TP-08	Tanks 51-53	Yes	Staining/crust at surface; 4 inch layer of staining at 1.75 to 2 ft. bgs.	No odor noted	No	--	--	--	--	--	4442	3	494
LOR-TP-09	Tanks 51-53	Yes	Black staining from 2 to 4 inches bgs, sandstone layer encountred at 4 inches bgs, odor starting at 6 inches bgs becoming stronger with depth in loose gray sand.	Strong odor noted	Yes	11/8/2017	LOR-TP-09-0.5	0.5	Benzo(b)fluoranthene, Benzo(a)pyrene, Benzo(a)anthracene, Indeno(1,2,3-cd)pyrene, Dibenz(a,h)anthracene, Naphthalene, Arsenic	Benzo(a)pyrene, Benzo(a)anthracene, Dibenz(a,h)anthracene, Benzo(b)fluoranthene			
						11/8/2017	LOR-TP-09-2.0	2.0	Benzo(a)pyrene, Dibenz(a,h)anthracene, Benzo(a)anthracene, Arsenic	--			
						11/8/2017	LOR-TP-09-5.0	5.0	Arsenic	--			
LOR-TP-17	Tanks 51-53	Yes	Heavy staining to 0.5 ft bgs; lighter staining to 4 ft. bgs; hydrocarbon odor noted from 1.75 to 4 ft bgs; water with sheen seeping into pit at 2.5 to 3 ft. bgs	Hydrocarbon odor	No	--	--	--	--	--			
LOR-TP-21	Tanks 51-53	Yes	some staining noted 1 to 2 feet bgs, increasing westward	No odor noted	No	--	--	--	--	--			
LOR-TP-10	Tanks 51-53	No	--	--	No	--	--	--	--	--	--	--	--
LOR-TP-18	Tanks 51-53	Yes	Surface crust with minor staining below the crust, staining deepens and becomes more intense to the west.	No odor noted	No	--	--	--	--	--	1856	1	69
LOR-TP-19	Tanks 51-53	No	--	--	No	--	--	--	--	--	--	--	--
LOR-TP-11	--	No	NA - pit visually clean, Surface crust noted 2 feet south and east of pit/	No odor noted	No	--	--	--	--	--	--	--	--
LOR-TP-12	Tank 39	Yes	Crust and approximately six inches of surface staining; strong odor from 3 to 4 ft. bgs, yielded small ammount of oily water before backfilling.	Strong odor noted	Yes	11/8/2017	LOR-TP-12-0.5	0.5	Arsenic	--	4391	1	163
						11/8/2017	LOR-TP-12-2.0	2.00	Arsenic	--			
						11/8/2017	LOR-TP-12-5.0	5.00	Arsenic	--			
LOR-TP-13	Tank 38	Yes	North end of pit has stained soil to 2 ft. bgs., and strong odor from 1.75 to 2 ft. bgs; south end of pit has no staining or odor	Strong odor noted in north end of pit	No	--	--	--	--	--	Removal Action Covered Under the Source Control Record of Decision		
LOR-WC-02	Tank 38; co-located with LOR-TP-13	Yes	North end of pit has stained soil to 2 ft. bgs., and strong odor from 1.75 to 2 ft. bgs; south end of pit has no staining or odor	Strong odor noted in north end of pit	Yes	11/8/2017	LOR-WC-02	0.0	Benzo(a)anthracene, Benzo(b)fluoranthene, Arsenic, >C12 - C28 Hydrocarbons, >C28 - C35 Hydrocarbons, C6 - C12 Hydrocarbons	Arsenic, >C12 - C28 Hydrocarbons, >C28 - C35 Hydrocarbons			
LOR-TP-14	Tank 38	Yes	Staining and odor to depth of 4 ft. bgs	Odor noted as increasing with depth	Yes	11/8/2017	LOR-TP-14-0.5	0.5	Arsenic	--			
						11/8/2017	LOR-TP-14-2.0	2.0	Arsenic	--

- Stream, Intermittent
- Stream, Perennial

Notes:
All units are milligrams per kilogram.
RSL=Regional Screening Levels (RSLs); RSLs are for Resident Soil use scenario, hazard index = 1.0 for non-carcinogens and a 10-6 cancer risk level for carcinogens.
J = estimated concentration
J+ = estimated concentration biased high

SOLUTION

Slug Test
Aquifer Model: Unconfined
Solution Method: Bouwer-Rice
ln(Re/rw): 3.818

VISUAL ESTIMATION RESULTS

Estimated Parameters

Parameter	Estimate	
K	0.2381	ft/day
y0	1.445	ft

K = 8.401E-5 cm/sec
T = K*b = 2.891 ft²/day (0.03108 sq. cm/sec)

AUTOMATIC ESTIMATION RESULTS

Estimated Parameters

Parameter	Estimate	Std. Error	Approx. C.I.	t-Ratio	
K	0.2672	0.004389	+/- 0.008791	60.88	ft/day
y0	1.557	0.01102	+/- 0.02207	141.3	ft

C.I. is approximate 95% confidence interval for parameter
t-ratio = estimate/std. error
No estimation window

K = 9.426E-5 cm/sec
T = K*b = 3.244 ft²/day (0.03488 sq. cm/sec)

Parameter Correlations

	K	y0
K	1.00	0.64
y0	0.64	1.00

Residual Statistics

for weighted residuals

Sum of Squares . . . . . 0.07062 ft^2
Variance. . . . . 0.001261 ft^2
Std. Deviation . . . . . 0.03551 ft
Mean . . . . . 0.004292 ft
No. of Residuals. 58
No. of Estimates. 2

Title: MW-06 Slug out
Date: 10/20/20
Time: 14:23:12

PROJECT INFORMATION

Company: EA Engineering
Client: U.S. EPA Region 6
Project: 14342128
Location: Creek County, Oklahoma
Test Date: 8/17/2020
Test Well: MW-06 Slug out

AQUIFER DATA

Saturated Thickness: 20. ft
Anisotropy Ratio (Kz/Kr): 1.

SLUG TEST WELL DATA

Test Well: MW-06 Slug Out

X Location: 0. ft
Y Location: 0. ft

Initial Displacement: 1.795 ft
Static Water Column Height: 41.06 ft
Casing Radius: 0.0833 ft
Well Radius: 0.0833 ft
Well Skin Radius: 0.25 ft
Screen Length: 20. ft
Total Well Penetration Depth: 41.06 ft

No. of Observations: 48

Observation Data

Time (sec)	Displacement (ft)	Time (sec)	Displacement (ft)
0.	1.795	267.6	0.413

247.2	0.438	1218.	0.104

SOLUTION

Slug Test
Aquifer Model: Unconfined

Solution Method: Bouwer-Rice
ln(Re/rw): 0.

VISUAL ESTIMATION RESULTS

Estimated Parameters

Parameter	Estimate	
K	0.2923	ft/day
y0	1.248	ft

K = 0.0001031 cm/sec
T = K*b = 5.846 ft²/day (0.06286 sq. cm/sec)

0850	17.01	0.659	27.8	2.68	7.06	-60.9	18.63	400	32.7		

Note:
Parameter Stabilization Limits:
(3 consecutive readings) for percent difference type parameters
Percent difference formula =
ABS[((first reading - second reading)/first reading) x 100]
Ex: Readings 12, 16, 15, 13
((12-16)/12)*100 = 33% ((16-15)/16)*100 = 6%
((15-13)/15)*100 = 13% In example, stabilization has not occurred.

Analyses: (circle those collected and indicate the number of containers)

Rite in the Rain

Location Bristow, OK, Wilcox Date 8-12-2020

Project / Client EPA Reg VI

J. Meinerts

0700 - On site

0730 - Prepping each team for events of the day, Drew - low-flow, Will & Jack - creek survey, Jacob - set temporary wells & log.

0800 - HASP w/ Mohawk crew

0845 - Setting up to drill on WPA-GW-06. Refusal at 7' bgs, heavy odor and visible product at 4' bgs. Tried for second hole and hit refusal at 7' bgs again. Plugged holes and moved to next location.

0920 At WPA-GW-01, drilling, slight odor of petroleum from core samples but no visible product

1000 Finish WPA-GW-01, drilled to 25' bgs, screen set from 15' to 25' Riser from surface to 15'

1025 at GW-10, Hit refusal at ~7ft bgs twice, Hit sandstone with product at top of it. Hole was plugged ad abandoned

1045 At WPA-GW-05, drill successful down to 25' bgs; bottom of hole collapsed in, casing was set

Location Bristow, Creek Co, OK Date 8-12-2020

Project / Client Wilcox, EPA Reg VII

J. Meinerts

to ~22' bgs, screen from 12' to 22', risers from surface to 12'

1110 - 20-25 sample sleeve is stuck in spoon, drillers working to free it. GW-05 has product in multiple zones, wherever there is sand, there is also product.

1145 - Drillers couldn't get sleeve out of spoon, will have to pick up another from yard in Tulsa.

1215 - Lunch

1315 - Moving to WPA-GW-08

1325 - Hit refusal at 2' and at 1' on the two attempts, hard pack sandstone at both spots, plugged & abandoned both holes.

1335 - Moved over to GW-06 area to attempt a different spot, drilled down to ~9' bgs, product throughout and had decent moisture. Well was set w/ screen from surface to 9'.

1400 - Moved to WPA-GW-07, drilled to 25', set casing: screen from 14'-24', riser from surface - 14'

Rite in the Rain

Location Bristow, Creek Co., OK Date 8-12-2020

Project / Client Wilcox / EPA Reg VI

J. Meinerts

1445 - Moving to WPA-GW-04, drilled to 12' bgs, screen from 2'-12', where we hit refusal

1500 - at WPA-GW-03, hit refusal at 1' and 2', plugged and abandoned

1515 - at WPA-GW-09, Drilled to 15' bgs, saturated zones throughout, screen from 5'-15'. Odor but no visible.

1535 - Move to Lorraine Processing Area, at LPA-GW-01, Drilled to ~14', screen from 4'-14'

1600 - Moving to LPA-GW-02, drilled to 15' where refusal was hit, set screen from 5'-15'

1625 - At LPA-GW-03, drilled to 15', hit refusal, screen set 5'-15',

1800 - Back at Hotel

8-12-2020

Location Bristow, Creek OK Date 8/13/20

Project / Client Wilcox / Reg 6.

W. Gamler

0715 - At site, meet at camp

0730 - HASP, and load up supplies and equipment

0800 - At GW-02 (WPA) for sampling

0810 - Sample @ WPA-GW-01 + Dupe Take 1 set of parameters then start filling containers, due to low recovery rates

0825 WPA-GW-01 goes dry, will move to next location while waiting for recharge

0840 Setup @ WPA-GW-05

0845 WPA-GW-05 is dry after sitting overnight

0900 @ WPA-GW-06

0910 Sample @ WPA-GW-06 Can't take parameters, to high turbidity and too much free product to improvement while trying to purge.

0915 WPA-GW-06 goes dry, will return later to continue sample collection

Rite in the Rain

Location Bristow, Creek, OK Date 8/13/20

Project / Client Wilcox O.U. / Key 6
W. Center

0935	@ WPA-Gw-09, very turbid try to purge into better condition in order to sample
0940	Sample @ WPA-Gw-09 + Dupe
1015	All containers collected @ WPA-Gw-09
1025	Setup @ WPA-Gw-07 Purge out solids, turbidity still high, strong hydrocarbon odor
1040	Sample @ WPA-Gw-07
1100	Fill all containers @ WPA-Gw-07
1230	Go Back to WPA-Gw-01, get a few more containers, let recharge will come back

Measuring point: **North side of casing** Pump depth setting: 11 Pump type/model:

	Δ < 1° C	Δ < 3%	Δ <10%	Δ <10%	Δ < 0.1 pH	Δ < 10 mV	Δ < 0.3 ft	< 1L/min	Δ< 10 NTU		Parameter Stabilization Limits (3 consecutive readings)
Time	**Temp (°C)**	**Conductivity (mS/cm) or (µS/cm)**	**DO (%)**	**DO (mg/L)**	**pH**	**ORP (mV)**	**Water Level (feet btoc)**	**Flow Rate (L/min) or (mL/min)**	**Turbidity (NTU)**	**Purge Volume (L) or (mL)**	**Additional Comments**
1330	23.16	0.271	83.1	7.08	5.60	197.1	/	/	OR		

Note:
Parameter Stabilization Limits:
(3 consecutive readings) for percent difference type parameters
Percent difference formula =
ABS[((first reading - second reading)/first reading) x 100]
Ex: Readings 12, 16, 15, 13
((12-16)/12)*100 = 33% ((16-15)/16)*100 = 6%
((15-13)/15)*100 = 13% In example, stabilization has not occurred.

Analyses: (circle those collected and indicate the number of containers)

Designee for
Kay G Hower, Principal Project Manager
2425 New Holland Pike, Lancaster, PA, 17601
(717)556-7364
kayhower@eurofinsus.com
09/16/2020

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Eurofins Lancaster Laboratories Env, LLC
2425 New Holland Pike, Lancaster, PA 17601
Tel (717) 656-2300 Fax (717) 656-2681 www.EurofinsUS.com

Job Number: 410-10696-1

Job Description: EPA 6 Wilcox Oil Co Superfund Site

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

* QC recoveries that exceed the upper limits and are associated with non-detect samples are qualified but no further narration is needed since the bias is high and does not change a non-detect result.

* Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.

* Surrogate recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANACASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
F1	MS and/or MSD recovery exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
X	Surrogate recovery exceeds control limits

HPLC/IC

Qualifier	Qualifier Description
H	Sample was prepped or analyzed beyond the specified holding time
H3	Sample was received and analyzed past holding time.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
HF	Field parameter with a holding time of 15 minutes. Test performed by laboratory at client's request.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
1C	Result is from the primary column on a dual-column method.
2C	Result is from the confirmation column on a dual-column method.
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job Narrative
410-10696-1

Receipt
The samples were received on 8/14/2020 11:09 AM; the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 0.6º C and 1.2º C.

GC/MS VOA
Method 8260C: The continuing calibration verification (CCV) associated with batch 410-35697 recovered outside acceptance criteria, low biased, for 2-Butanone. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Non-detections of the affected analytes are reported. Any detections are considered estimated.

Method 8260C: The continuing calibration verification (CCV) associated with batch 410-34763 recovered outside acceptance criteria, low biased, for 4-Methyl-2-pentanone, 2-Butanone, 2-Hexanone, Dichlorodifluoromethane and Methyl acetate. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Non-detections of the affected analytes are reported. Any detections are considered estimated.

Method 8260C: The method requirement for no headspace was not met. The following volatile sample was analyzed with headspace in the sample container(s): TB-01 (410-10696-5). The sample container was received with headspace.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method 8270D: The laboratory control sample (LCS) for 410-33824 recovered outside control limits for several analytes. Sample MW-04 (410-10696-3) was re-extracted outside the method required holding time and the QC was within acceptance limits. The data is reported from the initial trial.

Method 8270D: The laboratory control sample (LCS) for preparation batch 410-33824 recovered outside acceptance limits for several analytes. There was insufficient sample for samples MW-01 (410-10696-1) and WPA-GW-02 (410-10696-6) to perform a re-extraction or re-analysis; therefore, the data have been reported.

Method 8270D: Surrogate recovery for the following sample was outside of acceptance limits: MW-01 (410-10696-1). There was insufficient sample to perform a re-extraction; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

HPLC/IC
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Field Service / Mobile Lab
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Detection Summary

Client: EA Engineering, Science, and Technology
Job ID: 410-10696-1
Project/Site: EPA 6 Wilcox Oil Co Superfund Site

Client Sample ID: MW-01 — Lab Sample ID: 410-10696-1

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type

Accreditation/Certification Summary

Client: EA Engineering, Science, and Technology
Job ID: 410-10696-1
Project/Site: EPA 6 Wilcox Oil Co Superfund Site

Laboratory: Eurofins Lancaster Laboratories Env, LLC

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Oklahoma	NELAP	R-205	02-01-21

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
3500 Fe B-2011		Water	Ferrous Iron
8270D	3510C	Water	2-Methylphenol
EPA 300.0 R2.1		Water	Nitrogen, Nitrate
RSK-175	RSK-175	Water	CO2

Method Summary

Client: EA Engineering, Science, and Technology
Job ID: 410-10696-1

Description

Lot **LRAC6081**
Expiration Date April 2023
Manufacturing Date April 2020
Storage Conditions Refrigerate
Solvent/Matrix DICHLOROMETHANE

Injection Mode: Split, Split Ratio: 40: 1
Temperature Program: 100 °C (Hold 1 min) @ 20 °C/min to 280 °C (Hold 4 min)
Detector: FID
Detector Temperature: 330 °C

1 **Metrological traceability:** Traceable to the SI and higher order standards from NIST through an unbroken chain of comparisons. The balance used to weigh raw materials is accurate to +/-0.0001 g and calibrated regularly using mass standards traceable to NIST. All dilutions were performed gravimetrically. Additionally, individual analytes are traceable to NIST SRMs where available and specified above.
4 Ucrm - Uncertainty values in this document are expressed as Expanded Uncertainty (Ucrm) corresponding to the 95% confidence interval. Ucrm is derived from the combined standard uncertainty multiplied by the coverage factor k, which is obtained from a *t*-distribution and degrees of freedom. The components of combined standard uncertainty include the uncertainties due to characterization, homogeneity, long term stability, and short term stability (transport). The components due to stability are generally considered to be negligible unless otherwise indicated by stability studies. The mathematical representation of the Ucrm calculation is as follows:

$$u_{CRM} = \sqrt{u_{char}^2 + u_{\text{hom}\ ogeneity}^2 + u_{stability}^2}$$

***k*:** Coverage factor derived from a t-distribution table, based on the degrees of freedom of the data set. Assume 2.0 for a **Confidence interval = 95%**

6 Analytical Value- For QC verification of the certified value only- not to be used in calculations. Represents the analytical data obtained by comparison to a standard as analyzed by the method described in the CoA or another acceptable method. The result may differ from the certified value and UCRM based on method uncertainty as well as the uncertainty associated with the standard used for comparison.

Traceability: The standard was manufactured under an ISO/IEC 17025:2017 certified quality system. The balance used to weigh raw materials is accurate to +/- 0.0001g and calibrated regularly using mass standards traceable to NIST. All dilutions were preformed gravimetrically. Additionally, individual analytes are traceable to NIST SRMs where available and specified above.

Homogeneity: Homogeneity was assessed in accordance with ISO 17034:2016. Completed units were sampled using a random stratified sampling protocol. The results of chemical analysis were then compared using a one-way analysis of variance approach as described by TNI EL-V3-2009 Appendix A.2. See Instructions for minimum sub-sample size.

Expiration is at end of month given on certificate and label.

MSDS reports for components comprising greater than 1.0% of the solution or 0.1% for components known to be carcinogens are available upon request.

THIS PRODUCT WAS DESIGNED, PRODUCED AND VERIFIED FOR ACCURACY AND STABILITY IN ACCORDANCE WITH **ISO/IEC 17025:2017 (ANAB Cert AT-1467)** and **ISO 17034:2016 (ANAB Cert AR-1470).**

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k\sqrt{U^2_{gravimetric} + U^2_{homogeneity} + U^2_{storage\ stability} + U^2_{shipping\ stability}}$$

k is a coverage factor of 2, which gives a level of confidence of approximately 95%.

- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampules. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

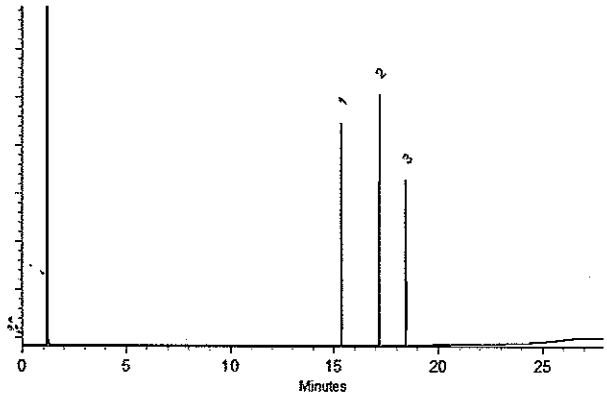
@ 9.6°C/min. (hold 2.86 min.)

Inj. Temp:
250°C

Det. Temp:
340°C

Det. Type:
FID



This chromatogram represents a general set of testing conditions chosen for product acceptance. For optimal results in your lab, conditions should be adjusted for your specific instrument, method, and application.

Clara Windle - Operations Technician I

Date Mixed: 18-Nov-2019 **Balance:** B442140311

Justine Albertson - Operations Tech-ARM QC

Date Passed: 21-Nov-2019

Manufactured under Restek's ISO 9001:2015 Registered Quality System Certificate #FM 80397

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k\sqrt{U^2_{gravimetric} + U^2_{homogeneity} + U^2_{storage\ stability} + U^2_{shipping\ stability}}$$

k is a coverage factor of 2, which gives a level of confidence of approximately 95%.

- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampules. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

CERTIFIED REFERENCE MATERIAL

Certificate of Analysis

ISO 17034 Accredited
Reference Material Producer
Certificate #3222.01

ISO/IEC 17025 Accredited
Testing Laboratory
Certificate #3222.02

FOR LABORATORY USE ONLY-READ SDS PRIOR TO USE.

This Reference Material is intended for Laboratory Use Only as a standard for the qualitative and/or quantitative determination of the analyte(s) listed.

Catalog No. : 563246-3.SEC **Lot No.:** A0148568

Description : Revised LCS Spike Kit/ Ampule #1

Revised LCS Spike Kit/ Ampule #1 500-2,000µg/mL, Methylene chloride, 20mL/ampul

Container Size : 20 mL **Pkg Amt:** > 20 mL

Expiration Date : October 31, 2020 **Storage:** 0°C or colder

Handling: Carcinogen/reproductive toxin. Photosensitive. Sonicate.

C E R T I F I E D V A L U E S

Elution Order	Compound	Grav. Conc. (weight/volume)	Expanded Uncertainty (95% C.L.; K=2)	
1	Pyridine	1,000.4 µg/mL	+/- 6.4337 µg/mL	Gravimetric
	CAS # 110-86-1.SEC (Lot QN8DK)		+/- 12.2707 µg/mL	Unstressed
	Purity 99%		+/- 19.2295 µg/mL	Stressed
2	N-Nitrosodimethylamine	1,000.6 µg/mL	+/- 6.4353 µg/mL	Gravimetric
	CAS # 62-75-9.SEC (Lot 71L89)		+/- 12.2738 µg/mL	Unstressed
	Purity 99%		+/- 19.2343 µg/mL	Stressed
3	2-Picoline	1,005.4 µg/mL	+/- 5.8590 µg/mL	Gravimetric
	CAS # 109-06-8.SEC (Lot PUXDM)		+/- 12.0252 µg/mL	Unstressed
	Purity 99%		+/- 19.1316 µg/mL	Stressed
4	Phenol	1,003.0 µg/mL	+/- 6.4503 µg/mL	Gravimetric
	CAS # 108-95-2.SEC (Lot EDPYN)		+/- 12.3023 µg/mL	Unstressed
	Purity 99%		+/- 19.2790 µg/mL	Stressed
5	Aniline	1,000.5 µg/mL	+/- 6.4345 µg/mL	Gravimetric
	CAS # 62-53-3.SEC (Lot ZCD3N)		+/- 12.2723 µg/mL	Unstressed
	Purity 99%		+/- 19.2319 µg/mL	Stressed
6	Bis(2-chloroethyl)ether	1,006.3 µg/mL	+/- 6.4719 µg/mL	Gravimetric
	CAS # 111-44-4.SEC (Lot FA010143)		+/- 12.3436 µg/mL	Unstressed
	Purity 99%		+/- 19.3437 µg/mL	Stressed
7	2-Chlorophenol	1,004.2 µg/mL	+/- 6.4580 µg/mL	Gravimetric
	CAS # 95-57-8.SEC (Lot GJ01)		+/- 12.3170 µg/mL	Unstressed
	Purity 99%		+/- 19.3021 µg/mL	Stressed

8	1,3-Dichlorobenzene		1,000.5	µg/mL	+/-	6.4345	µg/mL	Gravimetric
	CAS # 541-73-1.SEC	(Lot FMDFD)			+/-	12.2723	µg/mL	Unstressed
	Purity 99%				+/-	19.2319	µg/mL	Stressed
9	1,4-Dichlorobenzene		1,000.2	µg/mL	+/-	6.4325	µg/mL	Gravimetric
	CAS # 106-46-7.SEC	(Lot 4Y5DC)			+/-	12.2684	µg/mL	Unstressed
	Purity 99%				+/-	19.2259	µg/mL	Stressed
10	Benzyl alcohol		1,000.1	µg/mL	+/-	6.4321	µg/mL	Gravimetric
	CAS # 100-51-6.SEC	(Lot QZBUO)			+/-	12.2677	µg/mL	Unstressed
	Purity 99%				+/-	19.2247	µg/mL	Stressed
11	1,2-Dichlorobenzene		1,000.5	µg/mL	+/-	6.4345	µg/mL	Gravimetric
	CAS # 95-50-1.SEC	(Lot 4NRGF-OT)			+/-	12.2723	µg/mL	Unstressed
	Purity 99%				+/-	19.2319	µg/mL	Stressed
12	2-Methylphenol (o-cresol)		1,003.6	µg/mL	+/-	6.4545	µg/mL	Gravimetric
	CAS # 95-48-7.SEC	(Lot NC7HL)			+/-	12.3103	µg/mL	Unstressed
	Purity 99%				+/-	19.2915	µg/mL	Stressed
13	2,2'-oxybis(1-chloropropane)		1,004.4	µg/mL	+/-	6.4599	µg/mL	Gravimetric
	CAS # 108-60-1.SEC	(Lot 2-KMW-57-8)			+/-	12.3206	µg/mL	Unstressed
	Purity 99%				+/-	19.3076	µg/mL	Stressed
14	4-Methylphenol (p-cresol)		500.6	µg/mL	+/-	3.2195	µg/mL	Gravimetric
	CAS # 106-44-5.SEC	(Lot 65S2E)			+/-	6.1404	µg/mL	Unstressed
	Purity 99%				+/-	9.6227	µg/mL	Stressed
15	3-Methylphenol (m-cresol)		501.3	µg/mL	+/-	3.2237	µg/mL	Gravimetric
	CAS # 108-39-4.SEC	(Lot 6LHTM)			+/-	6.1484	µg/mL	Unstressed
	Purity 99%				+/-	9.6352	µg/mL	Stressed
16	Acetophenone		1,003.6	µg/mL	+/-	5.8485	µg/mL	Gravimetric
	CAS # 98-86-2.SEC	(Lot NSGTI)			+/-	12.0037	µg/mL	Unstressed
	Purity 99%				+/-	19.0973	µg/mL	Stressed
17	N-Nitroso-di-n-propylamine		1,000.1	µg/mL	+/-	6.4317	µg/mL	Gravimetric
	CAS # 621-64-7.SEC	(Lot 5939300)			+/-	12.2669	µg/mL	Unstressed
	Purity 99%				+/-	19.2235	µg/mL	Stressed
18	o-Toluidine		1,003.0	µg/mL	+/-	5.8450	µg/mL	Gravimetric
	CAS # 95-53-4.SEC	(Lot 42MPF)			+/-	11.9965	µg/mL	Unstressed
	Purity 99%				+/-	19.0859	µg/mL	Stressed
19	Hexachloroethane		1,005.8	µg/mL	+/-	6.4683	µg/mL	Gravimetric
	CAS # 67-72-1.SEC	(Lot 10173016)			+/-	12.3367	µg/mL	Unstressed
	Purity 99%				+/-	19.3329	µg/mL	Stressed
20	Nitrobenzene		1,003.8	µg/mL	+/-	6.4558	µg/mL	Gravimetric
	CAS # 98-95-3.SEC	(Lot FLYIG)			+/-	12.3129	µg/mL	Unstressed
	Purity 99%				+/-	19.2956	µg/mL	Stressed
21	Isophorone		1,000.8	µg/mL	+/-	6.4366	µg/mL	Gravimetric
	CAS # 78-59-1.SEC	(Lot XHGJI)			+/-	12.2761	µg/mL	Unstressed
	Purity 99%				+/-	19.2379	µg/mL	Stressed
22	2-Nitrophenol		1,001.7	µg/mL	+/-	6.4423	µg/mL	Gravimetric
	CAS # 88-75-5.SEC	(Lot GXJ7J)			+/-	12.2870	µg/mL	Unstressed
	Purity 99%				+/-	19.2550	µg/mL	Stressed
23	2,4-Dimethylphenol		1,001.8	µg/mL	+/-	6.4429	µg/mL	Gravimetric
	CAS # 105-67-9.SEC	(Lot MKBL3650V)			+/-	12.2882	µg/mL	Unstressed
	Purity 99%				+/-	19.2569	µg/mL	Stressed

24	Bis(2-chloroethoxy)methane		1,007.3	µg/mL	+/-	6.4784	µg/mL	Gravimetric
	CAS # 111-91-1 *	(Lot 4621000)			+/-	12.3558	µg/mL	Unstressed
	Purity 99%				+/-	19.3629	µg/mL	Stressed
25	2,4-Dichlorophenol		1,001.0	µg/mL	+/-	6.4378	µg/mL	Gravimetric
	CAS # 120-83-2.SEC	(Lot FHM01)			+/-	12.2784	µg/mL	Unstressed
	Purity 99%				+/-	19.2416	µg/mL	Stressed
26	1,2,4-Trichlorobenzene		1,000.1	µg/mL	+/-	6.4317	µg/mL	Gravimetric
	CAS # 120-82-1.SEC	(Lot OGO01)			+/-	12.2669	µg/mL	Unstressed
	Purity 99%				+/-	19.2235	µg/mL	Stressed
27	Naphthalene		1,007.3	µg/mL	+/-	6.4780	µg/mL	Gravimetric
	CAS # 91-20-3.SEC	(Lot SKZ5N)			+/-	12.3551	µg/mL	Unstressed
	Purity 99%				+/-	19.3617	µg/mL	Stressed
28	4-Chloroaniline		1,000.4	µg/mL	+/-	6.4337	µg/mL	Gravimetric
	CAS # 106-47-8.SEC	(Lot 10171860)			+/-	12.2707	µg/mL	Unstressed
	Purity 99%				+/-	19.2295	µg/mL	Stressed
29	Hexachlorobutadiene		1,008.2	µg/mL	+/-	6.4840	µg/mL	Gravimetric
	CAS # 87-68-3.SEC	(Lot 6878400)			+/-	12.3666	µg/mL	Unstressed
	Purity 97%				+/-	19.3798	µg/mL	Stressed
30	4-Chloro-3-methylphenol		1,000.5	µg/mL	+/-	6.4345	µg/mL	Gravimetric
	CAS # 59-50-7.SEC	(Lot FDO02)			+/-	12.2723	µg/mL	Unstressed
	Purity 99%				+/-	19.2319	µg/mL	Stressed
31	2-Methylnaphthalene		1,000.3	µg/mL	+/-	6.4331	µg/mL	Gravimetric
	CAS # 91-57-6.SEC	(Lot 76023-1)			+/-	12.2695	µg/mL	Unstressed
	Purity 98%				+/-	19.2276	µg/mL	Stressed
32	1-Methylnaphthalene		1,000.0	µg/mL	+/-	6.4313	µg/mL	Gravimetric
	CAS # 90-12-0.SEC	(Lot UATSA)			+/-	12.2661	µg/mL	Unstressed
	Purity 99%				+/-	19.2223	µg/mL	Stressed
33	1,2,4,5-Tetrachlorobenzene		1,003.8	µg/mL	+/-	5.8497	µg/mL	Gravimetric
	CAS # 95-94-3.SEC	(Lot AF02)			+/-	12.0061	µg/mL	Unstressed
	Purity 99%				+/-	19.1011	µg/mL	Stressed
34	Hexachlorocyclopentadiene		1,006.2	µg/mL	+/-	5.8637	µg/mL	Gravimetric
	CAS # 77-47-4.SEC	(Lot 8236100)			+/-	12.0348	µg/mL	Unstressed
	Purity 99%				+/-	19.1468	µg/mL	Stressed
35	2,4,6-Trichlorophenol		1,001.4	µg/mL	+/-	6.4404	µg/mL	Gravimetric
	CAS # 88-06-2.SEC	(Lot UUMYM)			+/-	12.2835	µg/mL	Unstressed
	Purity 98%				+/-	19.2495	µg/mL	Stressed
36	2,4,5-Trichlorophenol		1,004.9	µg/mL	+/-	6.4628	µg/mL	Gravimetric
	CAS # 95-95-4.SEC	(Lot MKBQ9937V)			+/-	12.3262	µg/mL	Unstressed
	Purity 99%				+/-	19.3165	µg/mL	Stressed
37	Biphenyl		1,004.0	µg/mL	+/-	5.8508	µg/mL	Gravimetric
	CAS # 92-52-4.SEC	(Lot 33OQE)			+/-	12.0084	µg/mL	Unstressed
	Purity 99%				+/-	19.1049	µg/mL	Stressed
38	2-Chloronaphthalene		1,000.7	µg/mL	+/-	6.4358	µg/mL	Gravimetric
	CAS # 91-58-7.SEC	(Lot 6899600)			+/-	12.2746	µg/mL	Unstressed
	Purity 99%				+/-	19.2355	µg/mL	Stressed
39	2-Nitroaniline		1,002.8	µg/mL	+/-	5.8438	µg/mL	Gravimetric
	CAS # 88-74-4.SEC	(Lot T6E7B)			+/-	11.9941	µg/mL	Unstressed
	Purity 99%				+/-	19.0821	µg/mL	Stressed

40	1,4-Dinitrobenzene		1,000.3	µg/mL	+/-	6.4329	µg/mL	Gravimetric
	CAS # 100-25-4.SEC	(Lot 3EUXH)			+/-	12.2692	µg/mL	Unstressed
	Purity 99%				+/-	19.2271	µg/mL	Stressed
41	Acenaphthylene		1,003.0	µg/mL	+/-	6.4508	µg/mL	Gravimetric
	CAS # 208-96-8.SEC	(Lot 0012014)			+/-	12.3032	µg/mL	Unstressed
	Purity 96%				+/-	19.2804	µg/mL	Stressed
42	1,3-Dinitrobenzene		1,000.6	µg/mL	+/-	6.4349	µg/mL	Gravimetric
	CAS # 99-65-0.SEC	(Lot 3XXLB)			+/-	12.2730	µg/mL	Unstressed
	Purity 99%				+/-	19.2331	µg/mL	Stressed
43	Dimethylphthalate		1,000.9	µg/mL	+/-	6.4374	µg/mL	Gravimetric
	CAS # 131-11-3.SEC	(Lot 483WC)			+/-	12.2776	µg/mL	Unstressed
	Purity 99%				+/-	19.2404	µg/mL	Stressed
44	2,6-Dinitrotoluene		1,006.6	µg/mL	+/-	6.4735	µg/mL	Gravimetric
	CAS # 606-20-2.SEC	(Lot GE01)			+/-	12.3466	µg/mL	Unstressed
	Purity 99%				+/-	19.3485	µg/mL	Stressed
45	1,2-Dinitrobenzene		1,000.4	µg/mL	+/-	6.4341	µg/mL	Gravimetric
	CAS # 528-29-0.SEC	(Lot CQEAE)			+/-	12.2715	µg/mL	Unstressed
	Purity 99%				+/-	19.2307	µg/mL	Stressed
46	Acenaphthene		1,001.3	µg/mL	+/-	6.4394	µg/mL	Gravimetric
	CAS # 83-32-9.SEC	(Lot BWZJE)			+/-	12.2815	µg/mL	Unstressed
	Purity 99%				+/-	19.2464	µg/mL	Stressed
47	3-Nitroaniline		1,006.2	µg/mL	+/-	5.8637	µg/mL	Gravimetric
	CAS # 99-09-2.SEC	(Lot FGN03)			+/-	12.0348	µg/mL	Unstressed
	Purity 99%				+/-	19.1468	µg/mL	Stressed
48	4-Nitrophenol		1,002.6	µg/mL	+/-	6.4477	µg/mL	Gravimetric
	CAS # 100-02-7.SEC	(Lot 2J5LB)			+/-	12.2974	µg/mL	Unstressed
	Purity 99%				+/-	19.2713	µg/mL	Stressed
49	2,4-Dinitrophenol		1,001.8	µg/mL	+/-	5.8380	µg/mL	Gravimetric
	CAS # 51-28-5.SEC	(Lot YTR6B)			+/-	11.9821	µg/mL	Unstressed
	Purity 99%				+/-	19.0631	µg/mL	Stressed
50	Dibenzofuran		1,000.4	µg/mL	+/-	6.4341	µg/mL	Gravimetric
	CAS # 132-64-9.SEC	(Lot 27ZGC)			+/-	12.2715	µg/mL	Unstressed
	Purity 99%				+/-	19.2307	µg/mL	Stressed
51	2,4-Dinitrotoluene		1,005.6	µg/mL	+/-	6.4675	µg/mL	Gravimetric
	CAS # 121-14-2.SEC	(Lot SHRSA)			+/-	12.3351	µg/mL	Unstressed
	Purity 99%				+/-	19.3305	µg/mL	Stressed
52	1-Naphthylamine (1-aminonaphthalene)		2,003.6	µg/mL	+/-	11.6491	µg/mL	Gravimetric
	CAS # 134-32-7.SEC	(Lot 81202156)			+/-	23.9512	µg/mL	Unstressed
	Purity 99%				+/-	38.1179	µg/mL	Stressed
53	2-Naphthylamine (2-aminonaphthalene)		2,003.4	µg/mL	+/-	11.6479	µg/mL	Gravimetric
	CAS # 91-59-8.SEC	(Lot 6732800)			+/-	23.9488	µg/mL	Unstressed
	Purity 99%				+/-	38.1141	µg/mL	Stressed
54	Fluorene		1,002.6	µg/mL	+/-	6.4482	µg/mL	Gravimetric
	CAS # 86-73-7.SEC	(Lot 6818700)			+/-	12.2983	µg/mL	Unstressed
	Purity 99%				+/-	19.2728	µg/mL	Stressed
55	4-Chlorophenyl phenyl ether		1,004.7	µg/mL	+/-	6.4615	µg/mL	Gravimetric
	CAS # 7005-72-3.SEC	(Lot P31G)			+/-	12.3236	µg/mL	Unstressed
	Purity 98%				+/-	19.3124	µg/mL	Stressed

56	Diethylphthalate		1,001.8	µg/mL	+/-	6.4430	µg/mL	Gravimetric
	CAS # 84-66-2.SEC	(Lot UMBJC)			+/-	12.2884	µg/mL	Unstressed
	Purity 99%				+/-	19.2572	µg/mL	Stressed
57	1-Nitronaphthalene		1,003.4	µg/mL	+/-	5.8473	µg/mL	Gravimetric
	CAS # 86-57-7.SEC	(Lot OGI01)			+/-	12.0013	µg/mL	Unstressed
	Purity 99%				+/-	19.0935	µg/mL	Stressed
58	4-Nitroaniline		1,002.8	µg/mL	+/-	5.8438	µg/mL	Gravimetric
	CAS # 100-01-6.SEC	(Lot 5ITRC)			+/-	11.9941	µg/mL	Unstressed
	Purity 99%				+/-	19.0821	µg/mL	Stressed
59	4,6-Dinitro-2-methylphenol (Dinitro-o-cresol)		1,000.6	µg/mL	+/-	6.4349	µg/mL	Gravimetric
	CAS # 534-52-1.SEC	(Lot 6899300)			+/-	12.2729	µg/mL	Unstressed
	Purity 99%				+/-	19.2329	µg/mL	Stressed
60	Diphenylamine		1,000.5	µg/mL	+/-	6.4345	µg/mL	Gravimetric
	CAS # 122-39-4.SEC	(Lot 10164691)			+/-	12.2723	µg/mL	Unstressed
	Purity 99%				+/-	19.2319	µg/mL	Stressed
61	Azobenzene		1,000.2	µg/mL	+/-	6.4325	µg/mL	Gravimetric
	CAS # 103-33-3.SEC	(Lot JUWAG)			+/-	12.2684	µg/mL	Unstressed
	Purity 99%				+/-	19.2259	µg/mL	Stressed
62	4-Bromophenyl phenyl ether		1,005.4	µg/mL	+/-	6.4659	µg/mL	Gravimetric
	CAS # 101-55-3.SEC	(Lot 84C6D)			+/-	12.3321	µg/mL	Unstressed
	Purity 99%				+/-	19.3257	µg/mL	Stressed
63	Hexachlorobenzene		1,001.3	µg/mL	+/-	6.4394	µg/mL	Gravimetric
	CAS # 118-74-1.SEC	(Lot G137934)			+/-	12.2815	µg/mL	Unstressed
	Purity 99%				+/-	19.2464	µg/mL	Stressed
64	Pentachlorophenol		1,007.1	µg/mL	+/-	6.4770	µg/mL	Gravimetric
	CAS # 87-86-5.SEC	(Lot 6143700)			+/-	12.3532	µg/mL	Unstressed
	Purity 99%				+/-	19.3588	µg/mL	Stressed
65	Phenanthrene		1,003.3	µg/mL	+/-	6.4524	µg/mL	Gravimetric
	CAS # 85-01-8.SEC	(Lot 7248800)			+/-	12.3063	µg/mL	Unstressed
	Purity 98%				+/-	19.2853	µg/mL	Stressed
66	Anthracene		1,002.8	µg/mL	+/-	6.4490	µg/mL	Gravimetric
	CAS # 120-12-7.SEC	(Lot WDFNJ)			+/-	12.2999	µg/mL	Unstressed
	Purity 99%				+/-	19.2752	µg/mL	Stressed
67	Carbazole		1,000.7	µg/mL	+/-	6.4358	µg/mL	Gravimetric
	CAS # 86-74-8.SEC	(Lot LMIZB)			+/-	12.2746	µg/mL	Unstressed
	Purity 99%				+/-	19.2355	µg/mL	Stressed
68	Di-n-butylphthalate		1,003.4	µg/mL	+/-	6.4530	µg/mL	Gravimetric

Solvent: Methylene chloride
CAS # 75-09-2
Purity 99%

Specific Reference Material Notes:
Hexachlorocyclopentadiene and 2,4-Dinitrophenol concentration was achieved through the use of sub-stock standard and direct addition, as a result the compound is listed twice on the certificate. Sum the two lines to attain the actual concentration.

Column:
30m x 0.25mm x 0.25µm
Rtx-5 (cat.#10223)

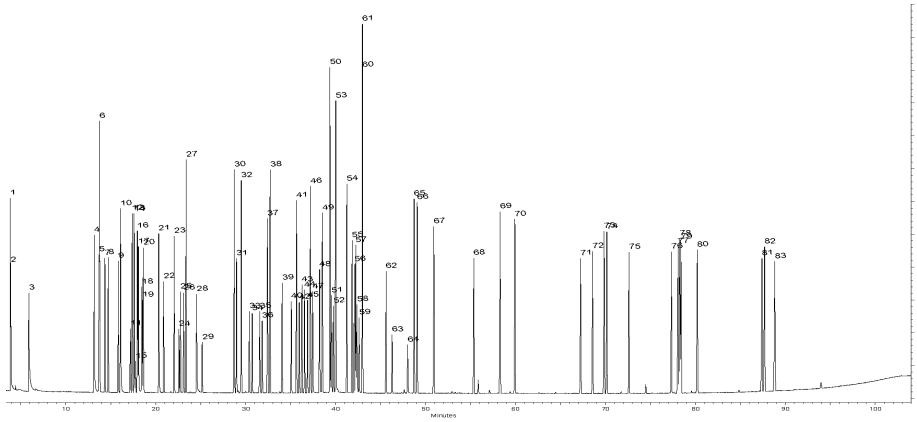
Carrier Gas:
hydrogen-constant pressure 10 psi

Temp. Program:
35°C (hold 3 min.) to 330°C
@ 3°C/min. (hold 3 min.)

Inj. Temp:
250°C

Det. Temp:
300°C

Det. Type:
FID



This chromatogram represents a general set of testing conditions chosen for product acceptance. For optimal results in your lab, conditions should be adjusted for your specific instrument, method, and application.

Manufactured under Restek's ISO 9001:2015 Registered Quality System Certificate #FM 80397

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k\sqrt{U^2_{gravimetric} + U^2_{homogeneity} + U^2_{storage\ stability} + U^2_{shipping\ stability}}$$

k is a coverage factor of 2, which gives a level of confidence of approximately 95%.

- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampules. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k\sqrt{U^2_{gravimetric} + U^2_{homogeneity} + U^2_{storage\ stability} + U^2_{shipping\ stability}}$$

k is a coverage factor of 2, which gives a level of confidence of approximately 95%.

- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampules. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k\sqrt{U^2_{gravimetric} + U^2_{homogeneity} + U^2_{storage\ stability} + U^2_{shipping\ stability}}$$

k is a coverage factor of 2, which gives a level of confidence of approximately 95%.

- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. Date Mixed: 12-Mar-2019 **Balance:** 1128342314

Jennifer J Pollino
Jennifer Pollino - Operations Tech-ARM QC

Date Passed: 15-Mar-2019

Manufactured under Restek's ISO 9001:2015 Registered Quality System Certificate #FM 80397

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k\sqrt{U^2_{gravimetric} + U^2_{homogeneity} + U^2_{storage\ stability} + U^2_{shipping\ stability}}$$

k is a coverage factor of 2, which gives a level of confidence of approximately 95%.

- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampules. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

Components: 1
Storage Condition: Refrig (0-5 °C)

Certified Reference Material

ANAB ACCREDITED AR-1463 ANAB ACCREDITED AT-1339 ilac-MRA

Component	CAS #	Purity % (GC/FID)	Prepared Concentration[2] (µg/mL)	Certified Analyte Concentration[1] (µg/mL)
Dichlorofluoromethane	75-43-4	98.0	2000	1960

A product with a suffix (-1A, -2B, etc. or -01, -02, etc.) on its lot number has had its expiration date extended and is identical to the same lot number without the suffix.

[2] All weights are traceable through NIST, Test No. 684/289871-17

[1] Certified Analyte Concentration = Purity x Prepared Concentration.

The Uncertainty associated with the certified concentration reported on this certificate is ±2.4%. This value is the combined expanded uncertainty and represents an estimated standard deviation equal to the positive square root of the total variation of the uncertainty of components. A normal distribution is assumed and a coverage factor of K=2 is chosen using approximately a 95% confidence level.

Labels and certificates follow U.S. Conventions in reporting numerical values: A comma (,) is used to separate units of one-thousand or greater. A period (.) is used as a decimal place marker.

The information on this certificate may not be reproduced without the express permission of the manufacturer. See reverse side for additional information

Certified By: Larry Decker, Organic QC Manager

For use in routine laboratory analysis.

1. **Quality Standards:**

   ISO 17034 – General Requirements for the Competence of Reference Material Producers ANAB Certificate Number AR-1463

   ISO/IEC 17025 – General Requirements for the Competence of Testing And Calibration Laboratories ANAB Certificate Number AT-1339

   ISO 9001:2015 – Quality Management System – Requirements Eagle Registrations Certificate Number 3774

2. **Intended Use:** The product covered by this certificate is designed for calibration or for use in quality control procedures for the specified chemical compounds listed on the reverse side. This product can be used for quantification and/or identification. This product can also be used as a reference material to validate analytical procedures, subject to the conditions under Section 7.

3. **Manufacturing:** All balances are calibrated daily using an in-house procedure with weights that are compared annually to master weights and traceable to NIST. The balances are also calibrated annually by an ISO/IEC 17025 accredited calibration laboratory. Please refer to the NIST test number listed on the front of this certificate. Class A glassware is used in the manufacture and quality control of all standards and calibrated using an in-house procedure. Good Laboratory Practices have been used throughout the preparation of this Standard.

4. **Homogeneity:** This product is sufficiently homogeneous and any sample size would be within the uncertainty budget.

5. **Stability:** The manufacturer guarantees the stability of this solution through the expiration date stated on the label, when handled and stored according to the conditions stated on the label

6. **Uncertainty:** The uncertainty values as stated on the face of this certificate have been determined using the EURACHEM/CITAC Guide. We report a combined expanded uncertainty equal to the positive square root of the total variance of the uncertainty of the components using the following formula: $u_a = \sqrt{(u(\mathrm{V}))^2 + (u(\mathrm{m}))^2 + (u(\mathrm{IV}))^2 + (u(\mathrm{RO}))^2}$ This formula represents uncertainty components from the mass, volume, short-term stability, long-term stability and homogeneity factors associated with the production of this product. The expanded uncertainty, assumes a normal distribution and a coverage factor of k=2 is chosen using approximately a 95% confidence level.

7. **Legal Notice and Limit of Liability:** This product is for routine laboratory analysis and research purposes only. The company's liability will be limited to replacement of product or refund of purchase price. Notice of claims must be made within thirty (30) days from date of delivery.

The information on this certificate may not be reproduced without the express permission of the manufacturer. See reverse side for additional information

Certified By: Larry Decker, Organic QC Manager

For use in routine laboratory analysis.

1. **Quality Standards:**

   ISO 17034 – General Requirements for the Competence of Reference Material Producers ANAB Certificate Number AR-1463

   ISO/IEC 17025 – General Requirements for the Competence of Testing And Calibration Laboratories ANAB Certificate Number AT-1339

   ISO 9001:2015 – Quality Management System – Requirements Eagle Registrations Certificate Number 3774

2. **Intended Use:** The product covered by this certificate is designed for calibration or for use in quality control procedures for the specified chemical compounds listed on the reverse side. This product can be used for quantification and/or identification. This product can also be used as a reference material to validate analytical procedures, subject to the conditions under Section 7.

3. **Manufacturing:** All balances are calibrated daily using an in-house procedure with weights that are compared annually to master weights and traceable to NIST. The balances are also calibrated annually by an ISO/IEC 17025 accredited calibration laboratory. Please refer to the NIST test number listed on the front of this certificate. Class A glassware is used in the manufacture and quality control of all standards and calibrated using an in-house procedure. Good Laboratory Practices have been used throughout the preparation of this Standard.

4. **Homogeneity:** This product is sufficiently homogeneous and any sample size would be within the uncertainty budget.

5. **Stability:** The manufacturer guarantees the stability of this solution through the expiration date stated on the label, when handled and stored according to the conditions stated on the label

6. **Uncertainty:** The uncertainty values as stated on the face of this certificate have been determined using the EURACHEM/CITAC Guide. We report a combined expanded uncertainty equal to the positive square root of the total variance of the uncertainty of the components using the following formula: $u_a = \sqrt{(u(\mathrm{V}))^2 + (u(\mathrm{m}))^2 + (u(\mathrm{IV}))^2 + (u(\mathrm{RO}))^2}$ This formula represents uncertainty components from the mass, volume, short-term stability, long-term stability and homogeneity factors associated with the production of this product. The expanded uncertainty, assumes a normal distribution and a coverage factor of k=2 is chosen using approximately a 95% confidence level.

7. **Legal Notice and Limit of Liability:** This product is for routine laboratory analysis and research purposes only. The company's liability will be limited to replacement of product or refund of purchase price. Notice of claims must be made within thirty (30) days from date of delivery.

CERTIFIED REFERENCE MATERIAL

Certificate of Analysis

ACCREDITED
ISO 17034 Accredited
Reference Material Producer
Certificate #3222.01

ACCREDITED
ISO/IEC 17025 Accredited
Testing Laboratory
Certificate #3222.02

FOR LABORATORY USE ONLY-READ SDS PRIOR TO USE.

This Reference Material is intended for Laboratory Use Only as a standard for the qualitative and/or quantitative determination of the analyte(s) listed.

Catalog No. : 569936-1.sec **Lot No.:** A0148625

Description : Custom Revised Q #1B Standard

Custom Revised Q #1B Standard 1,000µg/mL, P&T Methanol, 1mL/ampul

Container Size : 2 mL **Pkg Amt:** > 1 mL

Expiration Date : April 30, 2022 **Storage:** 0°C or colder

CERTIFIED VALUES

Elution Order	Compound	Grav. Conc. (weight/volume)	Expanded Uncertainty (95% C.L.; K=2)	
1	1,1-Dichloroethene	1,005.5 µg/mL	+/- 7.1750 µg/mL	Gravimetric

Solvent: P&T Methanol
CAS # 67-56-1
Purity 99%

Column:
105m x 0.53mm x 3.0µm
Rtx-502.2 (cat.# 10910)

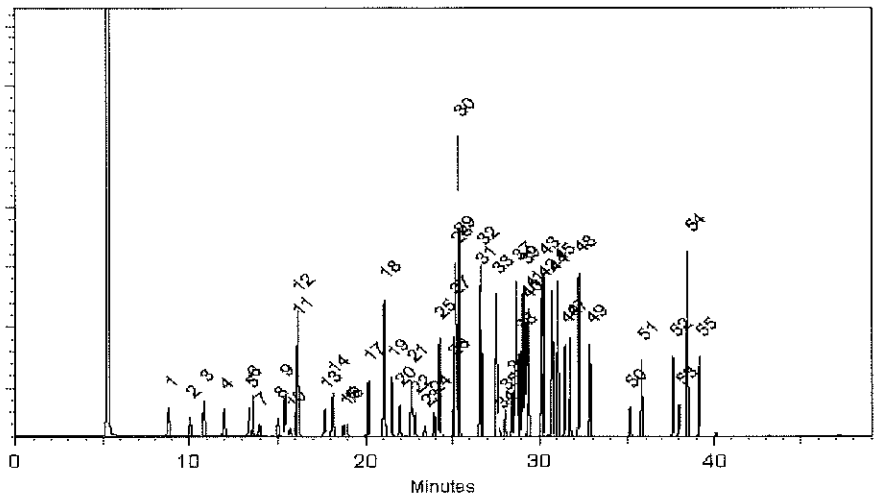
Carrier Gas:
hydrogen-constant pressure 8.0 psi.

Temp. Program:
40°C (hold 6 min.) to 240°C
@ 6°C/min. (hold 10 min.)

Inj. Temp:
200°C

Det. Temp:
250°C

Det. Type:
FID



This chromatogram represents a general set of testing conditions chosen for product acceptance. For optimal results in your lab, conditions should be adjusted for your specific instrument, method, and application.

Date Mixed: 26-Apr-2019 **Balance:** 1127510105

Jennifer Pollino

Jennifer Pollino - Operations Tech-ARM QC

Date Passed: 30-Apr-2019

Manufactured under Restek's ISO 9001:2015 Registered Quality System Certificate #FM 80397

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k\sqrt{U^2_{gravimetric} + U^2_{homogeneity} + U^2_{storage\ stability} + U^2_{shipping\ stability}}$$

k is a coverage factor of 2, which gives a level of confidence of approximately 95%.

- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampules. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

CERTIFIED REFERENCE MATERIAL

Certificate of Analysis

ACCREDITED
ISO 17034 Accredited
Reference Material Producer
Certificate #3222.01

ACCREDITED
ISO/IEC 17025 Accredited
Testing Laboratory
Certificate #3222.02

FOR LABORATORY USE ONLY-READ SDS PRIOR TO USE.

This Reference Material is intended for Laboratory Use Only as a standard for the qualitative and/or quantitative determination of the analyte(s) listed.

Catalog No. : 569936-1.sec **Lot No.:** A0148625

Description : Custom Revised Q #1B Standard

Custom Revised Q #1B Standard 1,000µg/mL, P&T Methanol, 1mL/ampul

Container Size : 2 mL **Pkg Amt:** > 1 mL

Expiration Date : April 30, 2022 **Storage:** 0°C or colder

CERTIFIED VALUES

Manufactured under Restek's ISO 9001:2015 Registered Quality System Certificate #FM 80397

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k\sqrt{U^2_{gravimetric} + U^2_{homogeneity} + U^2_{storage\ stability} + U^2_{shipping\ stability}}$$

k is a coverage factor of 2, which gives a level of confidence of approximately 95%.

- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampules. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

Date Passed: 19-Mar-2020

Manufactured under Restek's ISO 9001:2015 Registered Quality System Certificate #FM 80397

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k\sqrt{U^2_{gravimetric} + U^2_{homogeneity} + U^2_{storage\ stability} + U^2_{shipping\ stability}}$$

  k is a coverage factor of 2, which gives a level of confidence of approximately 95%.
- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampules. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

Certificate #3222.02

FOR LABORATORY USE ONLY-READ SDS PRIOR TO USE.

This Reference Material is intended for Laboratory Use Only as a standard for the qualitative and/or quantitative determination of the analyte(s) listed.

Catalog No. : 572312.SEC **Lot No.:** A0158704

Description : Custom Q #4C (Rev 3) Standard

Custom Q #4C (Rev 3) Standard 1,000µg/mL, P&T Methanol, 1mL/ampul

Container Size : 2 mL **Pkg Amt:** > 1 mL

Expiration Date : March 31, 2021 **Storage:** 0°C or colder

CERTIFIED VALUES

Elution Order	Compound	Grav. Conc. (weight/volume)	Expanded Uncertainty (95% C.L.; K=2)	
1	1,3-Butadiene	999.8 µg/mL	+/- 9.3559 µg/mL	Gravimetric
	CAS # 106-99-0.SEC (Lot 24033)		+/- 60.7686 µg/mL	Unstressed
	Purity 99%		+/- 60.9107 µg/mL	Stressed
2	1,2-Dichloro-1,1,2-trifluoroethane (CFC-123a)	998.8 µg/mL	+/- 17.4916 µg/mL	Gravimetric
	CAS # 354-23-4 * (Lot Q9B-64)		+/- 62.4823 µg/mL	Unstressed
	Purity 99%		+/- 62.6203 µg/mL	Stressed
3	n-Pentane (C5)	1,002.5 µg/mL	+/- 5.8832 µg/mL	Gravimetric
	CAS # 109-66-0.SEC (Lot FGH02)		+/- 60.4906 µg/mL	Unstressed
	Purity 99%		+/- 60.6341 µg/mL	Stressed
4	1,1,2-Trichlorotrifluoroethane (CFC-113)	1,003.5 µg/mL	+/- 5.8891 µg/mL	Gravimetric
	CAS # 76-13-1.SEC (Lot 18342)		+/- 60.5509 µg/mL	Unstressed
	Purity 99%		+/- 60.6946 µg/mL	Stressed
5	Iodomethane (methyl iodide)	1,008.0 µg/mL	+/- 5.9155 µg/mL	Gravimetric
	CAS # 74-88-4.SEC (Lot Y25A027)		+/- 60.8224 µg/mL	Unstressed
	Purity 99%		+/- 60.9668 µg/mL	Stressed
6	Carbon disulfide	1,005.0 µg/mL	+/- 5.8979 µg/mL	Gravimetric
	CAS # 75-15-0.SEC (Lot MKBL1376V)		+/- 60.6414 µg/mL	Unstressed
	Purity 99%		+/- 60.7854 µg/mL	Stressed
7	Methyl-tert-butyl ether (MTBE)	1,002.0 µg/mL	+/- 5.8803 µg/mL	Gravimetric
	CAS # 1634-04-4.SEC (Lot ZHKYA)		+/- 60.4604 µg/mL	Unstressed
	Purity 99%		+/- 60.6039 µg/mL	Stressed

8	n-Hexane (C6)		1,002.0	µg/mL	+/-	5.8803	µg/mL	Gravimetric
	CAS # 110-54-3.SEC	(Lot 10188491)			+/-	60.4604	µg/mL	Unstressed
	Purity 99%				+/-	60.6039	µg/mL	Stressed
9	Diisopropyl ether (DIPE)		1,003.0	µg/mL	+/-	5.8862	µg/mL	Gravimetric
	CAS # 108-20-3.SEC	(Lot LL7TN-SH)			+/-	60.5207	µg/mL	Unstressed
	Purity 99%				+/-	60.6644	µg/mL	Stressed
10	Chloroprene (2-chloro-1,3-butadiene)		1,001.5	µg/mL	+/-	5.8774	µg/mL	Gravimetric
	CAS # 126-99-8 *	(Lot 191204JLM)			+/-	60.4302	µg/mL	Unstressed
	Purity 99%				+/-	60.5737	µg/mL	Stressed
11	Ethyl-tert-butyl ether (ETBE)		1,001.0	µg/mL	+/-	5.8744	µg/mL	Gravimetric
	CAS # 637-92-3.SEC	(Lot MHBJG-QK)			+/-	60.4000	µg/mL	Unstressed
	Purity 99%				+/-	60.5434	µg/mL	Stressed
12	Cyclohexane		1,001.5	µg/mL	+/-	5.8774	µg/mL	Gravimetric
	CAS # 110-82-7.SEC	(Lot YADRA)			+/-	60.4302	µg/mL	Unstressed
	Purity 99%				+/-	60.5737	µg/mL	Stressed
13	tert-Amyl methyl ether (TAME)		1,006.0	µg/mL	+/-	5.9038	µg/mL	Gravimetric
	CAS # 994-05-8.SEC	(Lot 8471400)			+/-	60.7017	µg/mL	Unstressed
	Purity 99%				+/-	60.8458	µg/mL	Stressed
14	n-Heptane (C7)		1,006.0	µg/mL	+/-	5.9038	µg/mL	Gravimetric
	CAS # 142-82-5.SEC	(Lot OGM01)			+/-	60.7017	µg/mL	Unstressed
	Purity 99%				+/-	60.8458	µg/mL	Stressed
15	tert-Amyl ethyl ether (TAEE)		1,006.0	µg/mL	+/-	5.9038	µg/mL	Gravimetric
	CAS # 919-94-8.SEC	(Lot 6455100)			+/-	60.7017	µg/mL	Unstressed
	Purity 99%				+/-	60.8458	µg/mL	Stressed
16	Methyl methacrylate		1,006.0	µg/mL	+/-	5.9038	µg/mL	Gravimetric
	CAS # 80-62-6.SEC	(Lot G01X021)			+/-	60.7017	µg/mL	Unstressed
	Purity 99%				+/-	60.8458	µg/mL	Stressed
17	Ethyl methacrylate		1,004.5	µg/mL	+/-	5.8950	µg/mL	Gravimetric
	CAS # 97-63-2.SEC	(Lot MLWYK-LS)			+/-	60.6112	µg/mL	Unstressed
	Purity 99%				+/-	60.7551	µg/mL	Stressed
18	Benzyl chloride		1,003.5	µg/mL	+/-	5.8891	µg/mL	Gravimetric
	CAS # 100-44-7.SEC	(Lot H29N03)			+/-	60.5509	µg/mL	Unstressed
	Purity 99%				+/-	60.6946	µg/mL	Stressed
Solvent:	P&T Methanol							
	CAS # 67-56-1							
	Purity 99%							

*** Restek is unable to identify a reliable and/or acceptable second source for this material - the same batch of neat material may have been used to produce both the primary and secondary standard. The primary and secondary standards were prepared using different equipment and personnel.**

Tech Tips:
Raw material may contain trace amounts of tert-Butanol.

Column:
60m x 0.25mm x 1.4µm
Rtx-502.2 (cat.#10916)

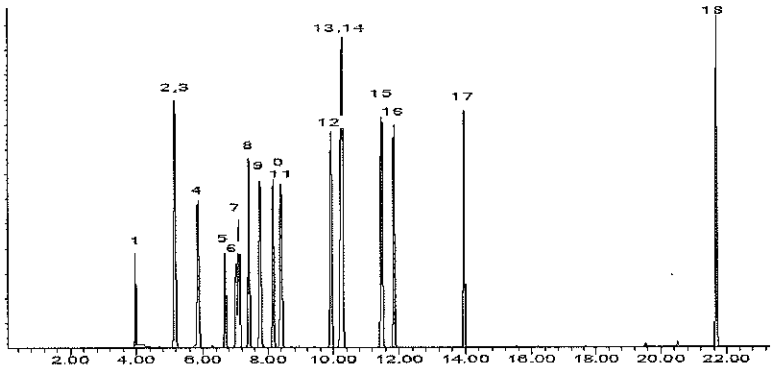
Carrier Gas:
helium-constant pressure 30 psi

Temp. Program:
40°C (hold 2 min.) to 240°C
@ 8°C/min. (hold 5 min.)

Inj. Temp:
200°C

Det. Temp:
250°C

Det. Type:
MSD



This chromatogram represents a general set of testing conditions chosen for product acceptance. For optimal results in your lab, conditions should be adjusted for your specific instrument, method, and application.

Matt Fragassi - Mix Technician

Date Mixed: 11-Mar-2020 **Balance:** 1128342314

Feng-Yun Lo – QC Analyst

Date Passed: 25-Mar-2020

Manufactured under Restek's ISO 9001:2015 Registered Quality System Certificate #FM 80397

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k\sqrt{U^2_{gravimetric} + U^2_{homogeneity} + U^2_{storage\ stability} + U^2_{shipping\ stability}}$$

k is a coverage factor of 2, which gives a level of confidence of approximately 95%.

- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampules. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k\sqrt{U^2_{gravimetric} + U^2_{homogeneity} + U^2_{storage\ stability} + U^2_{shipping\ stability}}$$

  k is a coverage factor of 2, which gives a level of confidence of approximately 95%.
- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampules. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

CERTIFIED REFERENCE MATERIAL

Certificate of Analysis

ACCREDITED
ISO 17034 Accredited
Reference Material Producer
Certificate #3222.01

ACCREDITED
ISO/IEC 17025 Accredited
Testing Laboratory
Certificate #3222.02

FOR LABORATORY USE ONLY-READ SDS PRIOR TO USE.

This Reference Material is intended for Laboratory Use Only as a standard for the qualitative and/or quantitative determination of the analyte(s) listed.

Catalog No. : 558268.SEC **Lot No.:** A0158906

Description : Custom QCS #6 Standard

Custom QCS #6 Standard 1,000µg/mL, P&T Methanol, 1mL/ampul

Container Size : 2 mL **Pkg Amt:** > 1 mL

Expiration Date : September 30, 2021 **Storage:** 0°C or colder

CERTIFIED VALUES

Elution Order	Compound	Grav. Conc. (weight/volume)	Expanded Uncertainty (95% C.L.; K=2)	
1	Methyl acetate	1,005.3 µg/mL	+/- 5.9714 µg/mL	Gravimetric

Manufactured under Restek's ISO 9001:2015 Registered Quality System Certificate #FM 80397

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k\sqrt{U^2_{gravimetric} + U^2_{homogeneity} + U^2_{storage\ stability} + U^2_{shipping\ stability}}$$

  k is a coverage factor of 2, which gives a level of confidence of approximately 95%.
- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampules. Larger volume deactivated vials are available through Restek as a custom ordered item. Solvent: P&T Methanol
CAS # 67-56-1
Purity 99%

Column:
105m x 0.53mm x 3.0µm
Rtx-502.2 (cat.# 10910)

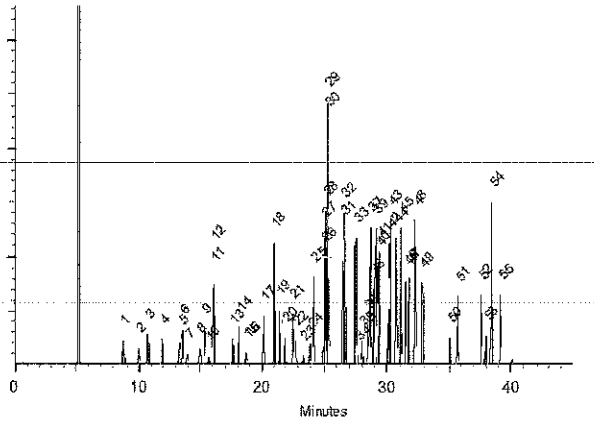
Carrier Gas:
hydrogen-constant pressure 8.0 psi.

Temp. Program:
40°C (hold 6 min.) to 240°C
@ 6°C/min. (hold 10 min.)

Inj. Temp:
200°C

Det. Temp:
250°C

Det. Type:
FID



This chromatogram represents a general set of testing conditions chosen for product acceptance. For optimal results in your lab, conditions should be adjusted for your specific instrument, method, and application.

Dawn Brownson - Mix Technician

Date Mixed: 19-Apr-2018 **Balance:** B707717271

Justine Albertson - Operations Tech-ARM QC

Date Passed: 23-Apr-2018

Manufactured under Restek's ISO 9001:2015
Registered Quality System
Certificate #FM 80397

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k\sqrt{U^2_{gravimetric} + U^2_{homogeneity} + U^2_{storage\ stability} + U^2_{shipping\ stability}}$$

k is a coverage factor of 2, which gives a level of confidence of approximately 95%.

- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampules. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

CERTIFIED REFERENCE MATERIAL

Certificate of Analysis

ACCREDITED
ISO 17034 Accredited
Reference Material Producer
Certificate #3222.01

ilac-MRA

ACCREDITED
ISO/IEC 17025 Accredited
Testing Laboratory
Certificate #3222.02

FOR LABORATORY USE ONLY-READ SDS PRIOR TO USE.

This Reference Material is intended for Laboratory Use Only as a standard for the qualitative and/or quantitative determination of the analyte(s) listed.

Catalog No. : 569936-1 **Lot No.:** A0158586

Description : Custom Revised V #1B Standard

Custom Revised V #1B Standard 5,000µg/mL, P&T Methanol, 1mL/ampul

Container Size : 2 mL **Pkg Amt:** > 1 mL

Expiration Date : March 31, 2023 **Storage:** 0°C or colder

CERTIFIED VALUES

Elution Order	Compound	Grav. Conc. (weight/volume)	Expanded Uncertainty (95% C.L.; K=2)	
1	1,1-dichloroethene **CAS #** 75-35-4 (Lot SHBK2437) **Purity** 99%	5,011.4 µg/mL	+/- 31.9644 µg/mL +/- 281.2901 µg/mL +/- 287.8577 µg/mL	Gravimetric Unstressed Stressed

Solvent: P&T Methanol
CAS # 67-56-1
Purity 99%

Column:
105m x 0.53mm x 3.0µm
Rtx-502.2 (cat.# 10910)

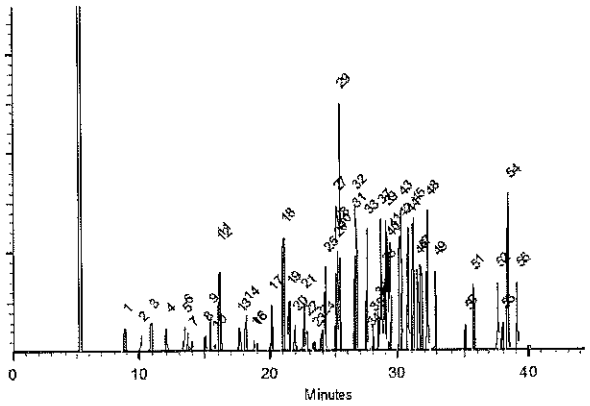
Carrier Gas:
hydrogen-constant pressure 8.0 psi.

Temp. Program:
40°C (hold 6 min.) to 240°C
@ 6°C/min. (hold 10 min.)

Inj. Temp:
200°C

Det. Temp:
250°C

Det. Type:
FID



This chromatogram represents a general set of testing conditions chosen for product acceptance. For optimal results in your lab, conditions should be adjusted for your specific instrument, method, and application.

Cydnei L. Crust - Mix Technician

Date Mixed: 09-Mar-2020 **Balance:** B251644995

Feng-Yun Lo - QC Analyst

Date Passed: 11-Mar-2020

Manufactured under Restek's ISO 9001:2015 Registered Quality System Certificate #FM 80397

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k\sqrt{U^2_{gravimetric} + U^2_{homogeneity} + U^2_{storage\ stability} + U^2_{shipping\ stability}}$$

k is a coverage factor of 2, which gives a level of confidence of approximately 95%.

- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampules. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

CERTIFIED REFERENCE MATERIAL

Certificate of Analysis

ACCREDITED
ISO 17034 Accredited
Reference Material Producer
Certificate #3222.01

ACCREDITED
ISO/IEC 17025 Accredited
Testing Laboratory
Certificate #3222.02

FOR LABORATORY USE ONLY-READ SDS PRIOR TO USE.

This Reference Material is intended for Laboratory Use Only as a standard for the qualitative and/or quantitative determination of the analyte(s) listed.

Catalog No. : 569936-1 **Lot No.:** A0158586

Description : Custom Revised V #1B Standard

Custom Revised V #1B Standard 5,000µg/mL, P&T Methanol, 1mL/ampul

Container Size : 2 mL **Pkg Amt:** > 1 mL

Expiration Date : March 31, 2023 **Storage:** 0°C or colder

CERTIFIED VALUES

Elution Order	Compound	Grav. Conc. (weight/volume)	Expanded Uncertainty (95% C.L.; K=2)	
1	1,1-dichloroethene **CAS #** 75-35-4 (Lot SHBK2437) **Purity** 99%	5,011.4 µg/mL	+/- 31.9644 µg/mL +/- 281.2901 µg/mL +/- 287.8577 µg/mL	Gravimetric Unstressed Stressed

This chromatogram represents a general set of testing conditions chosen for product acceptance. For optimal results in your lab, conditions should be adjusted for your specific instrument, method, and application.

Cydnei L. Crust - Mix Technician

Date Mixed: 09-Mar-2020 **Balance:** B251644995

Feng-Yun Lo - QC Analyst

Date Passed: 11-Mar-2020

Manufactured under Restek's ISO 9001:2015 Registered Quality System Certificate #FM 80397

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k\sqrt{U^2_{gravimetric} + U^2_{homogeneity} + U^2_{storage\ stability} + U^2_{shipping\ stability}}$$

k is a coverage factor of 2, which gives a level of confidence of approximately 95%.

- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampules. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

Date Passed: 12-Mar-2020

Manufactured under Restek's ISO 9001:2015 Registered Quality System Certificate #FM 80397

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k\sqrt{U^2_{gravimetric} + U^2_{homogeneity} + U^2_{storage\ stability} + U^2_{shipping\ stability}}$$

  k is a coverage factor of 2, which gives a level of confidence of approximately 95%.
- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampules. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

Manufactured under Restek's ISO 9001:2015 Registered Quality System Certificate #FM 80397

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k\sqrt{U^2_{gravimetric} + U^2_{homogeneity} + U^2_{storage\ stability} + U^2_{shipping\ stability}}$$

k is a coverage factor of 2, which gives a level of confidence of approximately 95%.

- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampules. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

FOR LABORATORY USE ONLY-READ SDS PRIOR TO USE.

This Reference Material is intended for Laboratory Use Only as a standard for the qualitative and/or quantitative determination of the analyte(s) listed.

Catalog No. : 572312 **Lot No.:** A0158660

Description : Custom V #4C (Rev 3) Standard

Custom V #4C (Rev 3) Standard 5,000µg/mL, P&T Methanol, 1mL/ampul

Container Size : 2 mL **Pkg Amt:** > 1 mL

Expiration Date : March 31, 2021 **Storage:** 0°C or colder

Handling: This product is photosensitive.

CERTIFIED VALUES

Elution Order	Compound	Grav. Conc. (weight/volume)	Expanded Uncertainty (95% C.L.; K=2)	
1	1,3-Butadiene	5,002.1 µg/mL	+/- 39.8717 µg/mL	Gravimetric
	CAS # 106-99-0 (Lot SHBK2299)		+/- 303.0271 µg/mL	Unstressed
	Purity 99%		+/- 303.7407 µg/mL	Stressed
2	1,2-Dichloro-1,1,2-trifluoroethane (CFC-123a)	5,001.4 µg/mL	+/- 47.3932 µg/mL	Gravimetric
	CAS # 354-23-4 (Lot Q9B-64)		+/- 304.0702 µg/mL	Unstressed
	Purity 99%		+/- 304.7812 µg/mL	Stressed
3	n-Pentane (C5)	5,025.0 µg/mL	+/- 29.4225 µg/mL	Gravimetric
	CAS # 109-66-0 (Lot SHBL0400)		+/- 303.2005 µg/mL	Unstressed
	Purity 99%		+/- 303.9203 µg/mL	Stressed
4	1,1,2-Trichlorotrifluoroethane (CFC-113)	5,024.0 µg/mL	+/- 29.4166 µg/mL	Gravimetric
	CAS # 76-13-1 (Lot 00016133)		+/- 303.1402 µg/mL	Unstressed
	Purity 99%		+/- 303.8598 µg/mL	Stressed
5	Iodomethane (methyl iodide)	5,035.0 µg/mL	+/- 29.4810 µg/mL	Gravimetric
	CAS # 74-88-4 (Lot D4406-0122JM)		+/- 303.8039 µg/mL	Unstressed
	Purity 99%		+/- 304.5251 µg/mL	Stressed
6	Carbon disulfide	5,046.0 µg/mL	+/- 29.5454 µg/mL	Gravimetric
	CAS # 75-15-0 (Lot U22D706)		+/- 304.4676 µg/mL	Unstressed
	Purity 99%		+/- 305.1904 µg/mL	Stressed
7	Methyl-tert-butyl ether (MTBE)	5,025.0 µg/mL	+/- 29.4225 µg/mL	Gravimetric
	CAS # 1634-04-4 (Lot SHBK4806)		+/- 303.2005 µg/mL	Unstressed

This chromatogram represents a general set of testing conditions chosen for product acceptance. For optimal results in your lab, conditions should be adjusted for your specific instrument, method, and application.

Tom Suckar - Mix Technician

Date Mixed: 09-Mar-2020 **Balance:** B707717271

Feng-Yue Lu - QC Analyst

Date Passed: 12-Mar-2020

Manufactured under Restek's ISO 9001:2015 Registered Quality System Certificate #FM 80397

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k\sqrt{U^2_{gravimetric} + U^2_{homogeneity} + U^2_{storage\ stability} + U^2_{shipping\ stability}}$$

  k is a coverage factor of 2, which gives a level of confidence of approximately 95%.
- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampules. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k\sqrt{U^2_{gravimetric} + U^2_{homogeneity} + U^2_{storage\ stability} + U^2_{shipping\ stability}}$$

k is a coverage factor of 2, which gives a level of confidence of approximately 95%.

- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampules. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/µECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k\sqrt{U^2_{gravimetric} + U^2_{homogeneity} + U^2_{storage\ stability} + U^2_{shipping\ stability}}$$

k is a coverage factor of 2, which gives a level of confidence of approximately 95%.

- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. 53	Hexachlorobutadiene **CAS #** 87-68-3 **Purity** 99%	(Lot J31X013)	5,033.6	µg/mL	+/- 31.9164 +/- 282.5175 +/- 289.1148	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
54	Naphthalene **CAS #** 91-20-3 **Purity** 99%	(Lot MKBW2603V)	5,033.6	µg/mL	+/- 31.9164 +/- 282.5175 +/- 289.1148	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
55	1,2,3-Trichlorobenzene **CAS #** 87-61-6 **Purity** 99%	(Lot MKBS4859V)	5,016.0	µg/mL	+/- 31.8046 +/- 281.5283 +/- 288.1024	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed

Solvent: P&T Methanol
CAS # 67-56-1
Purity 99%

Column:
105m x 0.53mm x 3.0µm
Rtx-502.2 (cat.# 10910)

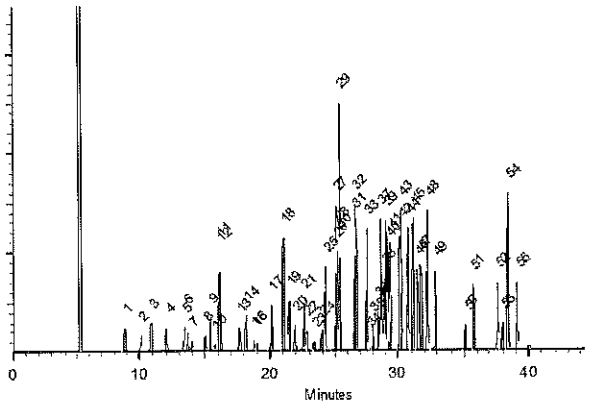
Carrier Gas:
hydrogen-constant pressure 8.0 psi.

Temp. Program:
40°C (hold 6 min.) to 240°C
@ 6°C/min. (hold 10 min.)

Inj. Temp:
200°C

Det. Temp:
250°C

Det. Type:
FID



This chromatogram represents a general set of testing conditions chosen for product acceptance. For optimal results in your lab, conditions should be adjusted for your specific instrument, method, and application.

Cydnei L. Crust - Mix Technician

Date Mixed: 09-Mar-2020 **Balance:** B251644995

Feng-Yun Lo - QC Analyst

Date Passed: 11-Mar-2020

Manufactured under Restek's ISO 9001:2015 Registered Quality System Certificate #FM 80397

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k\sqrt{U^2_{gravimetric} + U^2_{homogeneity} + U^2_{storage\ stability} + U^2_{shipping\ stability}}$$

  k is a coverage factor of 2, which gives a level of confidence of approximately 95%.
- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampules. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

Reagent

MT_H3NO_JT_00015

Hydroxylamine Hydrochloride, Crystal
BAKER ANALYZED® A.C.S. Reagent
Suitable for Mercury Determination
(hydroxylammonium chloride)

Material No.: 2196-01
Batch No.: 0000252114
Manufactured Date: 2019/11/01
Retest Date: 2026/10/30
Revision No: 1

Certificate of Analysis

Meets ACS Reagent Chemical Requirements,

Test	Specification	Result
Assay ($NH_2OH \cdot HCl$) (by $KMnO_4$ titrn)	>= 96.0 %	99.6
Clarity of Alcohol Solution	Passes Test	PT
Residue after Ignition	<= 0.050 %	0.050
Titrable Free Acid (meq/g)	<= 0.25	0.25
Ammonium (NH_4)	Passes Test	PT
Sulfur Compounds (as SO_4)	<= 0.005 %	0.005
Trace Impurities - ACS - Heavy Metals (as Pb)	<= 5 ppm	5
Trace Impurities - Iron (Fe)	<= 5 ppm	5
Trace Impurities - Mercury (Hg)	<= 0.050 ppm	< 0.005

For Laboratory, Research or Manufacturing Use

Country of Origin: IN
Packaging Site: Paris Mfg Ctr & DC

Reagent

MT_HCl_JT_00005

Hydrochloric Acid, 36.5-38.0%
BAKER INSTRA-ANALYZED® Reagent
For Trace Metal Analysis

Material No.: 9530-33
Batch No.: 0000243992
Manufactured Date: 2019/09/17
Retest Date: 2024/09/15
Revision No: 1

Certificate of Analysis

Test	Specification	Result
ACS - Assay (as HCl) (by acid-base titrn)	36.5 - 38.0 %	37.7
ACS - Color (APHA)	<= 10	5
ACS - Residue after Ignition	<= 3 ppm	< 1
ACS - Specific Gravity at 60°/60°F	1.185 - 1.192	1.191
ACS - Bromide (Br)	<= 0.005 %	< 0.005
ACS - Extractable Organic Substances	<= 5 ppm	< 1
ACS - Free Chlorine (as Cl_2)	<= 0.5 ppm	< 0.5
Phosphate (PO_4)	<= 0.05 ppm	< 0.03
Sulfate (SO_4)	<= 0.5 ppm	< 0.3
Sulfite (SO_3)	<= 0.8 ppm	0.3
Ammonium (NH_4)	<= 3 ppm	< 1
Trace Impurities - Arsenic (As)	<= 0.010 ppm	< 0.003
Trace Impurities - Aluminum (Al)	<= 10.0 ppb	< 5.0
Arsenic and Antimony (as As)	<= 5 ppb	< 3
Trace Impurities - Barium (Ba)	<= 1.0 ppb	< 0.2
Trace Impurities - Beryllium (Be)	<= 1.0 ppb	< 0.2
Trace Impurities - Bismuth (Bi)	<= 10.0 ppb	< 1.0
Trace Impurities - Boron (B)	<= 20.0 ppb	< 5.0
Trace Impurities - Cadmium (Cd)	<= 1.0 ppb	0.3
Trace Impurities - Calcium (Ca)	<= 50.0 ppb	8.3
Trace Impurities - Chromium (Cr)	<= 1.0 ppb	0.4
Trace Impurities - Cobalt (Co)	<= 1.0 ppb	< 0.3
Trace Impurities - Copper (Cu)	<= 1.0 ppb	< 0.1
Trace Impurities - Gallium (Ga)	<= 1.0 ppb	< 0.2

For questions on this Certificate of Analysis please contact Technical Services at 855.282.6867 or +1.610.386.1700

100 Matsonford Rd, Suite 200, Radnor, PA 19087. U.S.A. Phone: 610.386.1700

Test	Specification	Result
Trace Impurities - Germanium (Ge)	<= 3.0 ppb	< 2.0
Trace Impurities - Gold (Au)	<= 4.0 ppb	< 0.2
Heavy Metals (as Pb)	<= 100 ppb	< 50
Trace Impurities - Iron (Fe)	<= 15.0 ppb	4.0
Trace Impurities - Lead (Pb)	<= 1.0 ppb	< 0.5
Trace Impurities - Lithium (Li)	<= 1.0 ppb	< 0.2
Trace Impurities - Magnesium (Mg)	<= 10.0 ppb	0.4
Trace Impurities - Manganese (Mn)	<= 1.0 ppb	< 0.4
Trace Impurities - Mercury (Hg)	<= 0.5 ppb	0.1
Trace Impurities - Molybdenum (Mo)	<= 10.0 ppb	< 5.0
Trace Impurities - Nickel (Ni)	<= 4.0 ppb	< 0.3
Trace Impurities - Niobium (Nb)	<= 1.0 ppb	< 0.2
Trace Impurities - Potassium (K)	<= 9.0 ppb	< 2.0
Trace Impurities - Selenium (Se), For Information Only	ppb	1.1
Trace Impurities - Silicon (Si)	<= 100.0 ppb	< 10.0
Trace Impurities - Silver (Ag)	<= 1.0 ppb	< 0.3
Trace Impurities - Sodium (Na)	<= 100.0 ppb	< 5.0
Trace Impurities - Strontium (Sr)	<= 1.0 ppb	< 0.2
Trace Impurities - Tantalum (Ta)	<= 1.0 ppb	< 0.9
Trace Impurities - Thallium (Tl)	<= 5.0 ppb	< 2.0
Trace Impurities - Tin (Sn)	<= 5.0 ppb	< 0.8
Trace Impurities - Titanium (Ti)	<= 1.0 ppb	< 0.2
Trace Impurities - Vanadium (V)	<= 1.0 ppb	< 0.2
Trace Impurities - Zinc (Zn)	<= 5.0 ppb	0.3
Trace Impurities - Zirconium (Zr)	<= 1.0 ppb	< 0.1

For Laboratory, Research or Manufacturing Use
Product Information (not specifications):
Appearance (clear, fuming liquid)
Meets ACS Specifications

Country of Origin: US
Packaging Site: Phillipsburg Mfg Ctr & DC

ACCREDITED
Reference Material Producer
ISO GUIDE 34:2009 02

*Concentration value derived from v/v dilutions of certified, NIST-traceable starting materials

Note: The uncertainty of the certified value has been calculated from applicable uncertainty contributors (u_i) such as the SRM inherited uncertainty, weighing and dilution errors and instrument variability. The combined uncertainty ($uc = v\Sigma u_i^2$) has been multiplied by a coverage factor (k) of 2 to provide a 95% confidence interval.

1.0 ACCREDITATION / REGISTRATION

INORGANIC VENTURES is accredited to ISO 17034, "General Requirements for the Competence of Reference Material Producers" and ISO/IEC 17025, "General Requirements for the Competence of Testing and Calibration Laboratories". Inorganic Ventures is also an ISO 9001 registered manufacturer (QSR Certificate Number QSR-1034).

ACCREDITED Testing Laboratory Certificate 883.01
ACCREDITED Reference Material Producer Certificate 883.02

2.0 PRODUCT DESCRIPTION

Product Code:	Multi Analyte Custom Grade Solution
Catalog Number:	IV-57350
Lot Number:	R2-MEB693773
Matrix:	3% (v/v) HNO3
Value / Analyte(s):	500 µg/mL ea: Potassium,
	200 µg/mL ea: Nickel,
	40 µg/mL ea: Zinc

3.0 CERTIFIED VALUES AND UNCERTAINTIES

ANALYTE	CERTIFIED VALUE	ANALYTE	CERTIFIED VALUE
Nickel, Ni	**200.0 ± 0.9 µg/mL**	**Potassium, K**	**499.9 ± 2.0 µg/mL**
Zinc, Zn	**39.96 ± 0.17 µg/mL**		

Density: 1.015 g/mL (measured at 20 ± 4 ºC)

Assay Information:

ANALYTE	METHOD	NIST SRM#	SRM LOT#
K	ICP Assay	3141a	140813
K	Gravimetric		See Sec. 4.2
Ni	ICP Assay	3136	120619
Ni	EDTA	928	928
Zn	ICP Assay	3168a	120629
Zn	EDTA	928	928

The follow ing equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

Characterization of CRM/RM by Two or More Methods

Certified Value, $X_{CRM/RM}$, where two or more methods of characterization are used is the weighted mean of the results:

$X_{CRM/RM} = \Sigma(w_i)(X_i)$

X_i = mean of Assay Method i with standard uncertainty $u_{char\ i}$

w_i = the weighting factors for each method calculated using the inverse square of the variance:

$w_i = (1/u_{char\ i})^2 / (\Sigma(1/(u_{char\ i})^2)$

CRM/RM Expanded Uncertainty (±) = $U_{CRM/RM} = k\,(u^2_{char} + u^2_{bb} + u^2_{lts} + u^2_{ts})^{½}$

k = coverage factor = 2

$u_{char} = [\Sigma((w_i)^2\,(u_{char\ i})^2)]^{½}$ where $u_{char\ i}$ are the errors from each characterization method

u_{bb} = bottle to bottle homogeneity standard uncertainty

u_{lts} = long term stability standard uncertainty (storage)

u_{ts} = transport stability standard uncertainty

Characterization of CRM/RM by One Method

Certified Value, $X_{CRM/RM}$, where one method of characterization is used is the mean of individual results:

$X_{CRM/RM} = (X_a)\,(u_{char\ a})$

X_a = mean of Assay Method A with

$u_{char\ a}$ = the standard uncertainty of characterization Method A

CRM/RM Expanded Uncertainty (±) = $U_{CRM/RM} = k\,(u^2_{char\ a} + u^2_{bb} + u^2_{lts} + u^2_{ts})^{½}$

k = coverage factor = 2

$u_{char\ a}$ = the errors from characterization

u_{bb} = bottle to bottle homogeneity standard uncertainty

u_{lts} = long term stability standard uncertainty (storage)

u_{ts} = transport stability standard uncertainty

4.0 TRACEABILITY TO NIST

- This product is traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM/RM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRM/RM are available, the term 'in-house std.' is specified.

4.1 Thermometer Calibration

- All thermometers are NIST traceable through thermometers that are calibrated by an accredited calibration laboratory.

4.2 Balance Calibration

- All analytical balances are calibrated by an accredited calibration laboratory and procedure. The weights used for testing are annually compared to master weights and are traceable to NIST.

4.3 Glassware Calibration

- An in-house procedure is used to calibrate all Class A glassware used in the manufacturing and quality control of CRM/RMs.

5.0 TRACE METALLIC IMPURITIES (TMI) DETERMINED BY ICP-MS AND ICP-OES (µg/mL)

N/A

6.0 INTENDED USE

- For the calibration of analytical instruments and validation of analytical methods as appropriate.

7.0 INSTRUCTIONS FOR THE CORRECT USE OF THIS REFERENCE MATERIAL

7.1 Storage and Handling Recommendations

- Store between approximately 4° - 30° C while in sealed TCT bag.

- While stored in the sealed TCT bag, transpiration of this CRM/RM is negligible. After opening the sealed TCT bag transpiration of the CRM/RM will occur, resulting in a gradual increase in the analyte concentration(s). It is the responsibility of the user to account for this effect. When the bottle is weighed both before and after being placed in storage, the mass difference observed will be a measure of transpiration mass loss.

- After opening the sealed TCT bag, keep cap tightly sealed when not in use and store between 4° - 24° C to minimize the effects of transpiration. Use at 20° ± 4° C to minimize volumetric dilution error when using the reported density. Do not pipette from the container. Do not return removed aliquots to container.

- For more information, visit **www.inorganicventures.com/TCT**

8.0 HAZARDOUS INFORMATION

- Please refer to the Safety Data Sheet for information regarding this CRM/RM.

9.0 HOMOGENEITY

- This solution was mixed according to an in-house procedure and is guaranteed to be homogeneous. Homogeneity data indicate that the end user should take a minimum sample size of 0.2 mL to assure homogeneity.

10.0 QUALITY STANDARD DOCUMENTATION

10.1 ISO 9001 Quality Management System Registration

- QSR Certificate Number QSR-1034

10.2 ISO/IEC 17025 "General Requirements for the Competence of Testing and Calibration Laboratories"

- Chemical Testing - Accredited / A2LA Certificate Number 883.01

10.3 ISO 17034 "General Requirements for the Competence of Reference Material Producers"

- Reference Material Producer - Accredited / A2LA Certificate Number 883.02

Inorganic Ventures, 300 Technology Drive, Christiansburg, Va. 24073, USA; Telephone: 800.669.6799; 540.585.3030, Fax: 540.585.3012; inorganicventures.com; info@inorganicventures.com

11.0 CERTIFICATION, LOT EXPIRATION AND PERIOD OF VALIDITY

11.1 Certification Issue Date

June 10, 2020

- The certification is valid within the measurement uncertainty specified provided the CRM/RM is stored and handled in accordance with instructions given in Sec 7.1. This certification is nullified if instructions in Sec 7.1 are not followed or if the CRM/RM is damaged, contaminated, or otherwise modified.

11.2 Lot Expiration Date

- **June 10, 2024**

- The date after which this CRM/RM should not be used.

- The lot expiration date reflects the period of time that the stability of a CRM/RM can be supported by long term stability studies conducted on properly stored and handled CRM/RMs. Lot expiration is limited primarily by transpiration (loss of water from the solution) and infrequently by chemical stability.

11.3 Period of Validity

- Sealed TCT Bag Open Date: _____

- This CRM/RM should not be used longer than one year (or six months in the case of a 30 mL bottle) from the date of opening the aluminized bag or after the date given in Sec. 11.2, whichever comes first. This is contingent upon the CRM/RM being stored and handled in accordance with the instructions given in Sec. 7.1.

*Concentration value derived from v/v dilutions of certified, NIST-traceable starting materials

Note: The uncertainty of the certified value has been calculated from applicable uncertainty contributors (u_i) such as the SRM inherited uncertainty, weighing and dilution errors and instrument variability. The combined uncertainty ($uc= v\Sigma u_i^2$) has been multiplied by a coverage factor (k) of 2 to provide a 95% confidence interval.

SCP SCIENCE

Providing Innovative Solutions to Analytical Chemists

5.0 INTENDED USE:

- ICP Standards: For the calibration of, including but not limited to: ICP-AES, ICP-MS, FAAS, GFAA, XRF and DCP.
- AA Standards: For the calibration of Flame (FAAS) and Graphite Furnace (GFAA) Atomic Absorption Spectrometers.
- Matrix Modifiers: For the optimization of analytical conditions to provide better Graphite Furnace Atomic Absorption (GFAA) instrument response and improved detection limits.
- pH Standards: For the calibrating pH meters or for other wet chemistry applications.
- Conductivity Standards: For electrolytic conductivity measurement as a calibration standard.
- IC Standards: for calibration of, but not limited to IC, HPLC, TLC, ISE, IR, NMR, MS, UV/VIS or other wet chemistry applications.

For any inquiries, please contact **SCP SCIENCE**.

6.0 INSTRUCTIONS FOR USE:

Handling and Storage: Keep product tightly capped when not in use. The solution should be opened for a minimum amount of time necessary to dispense the amount required. Do not pipet or use directly from container. Do not return unused portions back to container. Store under normal laboratory conditions. Avoid exposure to excessive sources of heat and humidity or direct sunlight.

Stability: This Standard is guaranteed to be stable and accurate to within the specified uncertainty of measurement up to the unopened expiry date, if sealed, or up to the opened expiry date (when indicated), whichever comes first, provided the solution is kept tightly capped and stored under the indicated storage conditions. Purchasers will be notified of any significant changes resulting in re-certification or withdrawal of the product prior to the expiration date.

7.0 HAZARDOUS INFORMATION :

Please refer to the associated Material Safety Data Sheet (MSDS) for information regarding this product (available at www.SCPSCIENCE.com).

8.0 HOMOGENEITY:

This solution has been blended according to an in-house procedure and its homogeneity is guaranteed to be fit for purpose when a sample size sufficient for the intended method of analysis is used.

9.0 TRACEABILITY:

This CRM (Certified Reference Material) is traceable to the NIST SRM (Standard Reference Material) indicated in section 2 through an unbroken chain of comparisons. In addition, balances used are regularly calibrated using weights which are traceable to NIST (National Institute of Standards and Technology) or NRC (National Research Council of Canada) standards. All conductivity meters used to analyze this standard have been regularly calibrated using a NIST or NRC traceable Thermometer and standards. All pH meters used to analyze this standard have been regularly calibrated using a NIST or NRC traceable thermometer and pH/MV simulator.

10.0 PREPARATION*:*

For the preparation of these solutions, 18 meghom/cm double deionized water, high-purity acids and glassware calibrated to ASTM Class A specifications are used.

11.0 QUALITY SYSTEM CERTIFICATIONS*:*

ISO 9001 Certification: This standard was produced in a facility which operates a **registered** ISO 9001 Quality Management System. Please consult our web site for a copy of the most recent revision of our certificate of registration.

ISO 17025 Accreditation: SCP SCIENCE (Corporate Headquarters) operates an ISO 17025 **accredited** laboratory. Please consult our web site for a copy of the most recent revision of our certificate and scope of accreditation.

ISO 17034 Accreditation: SCP SCIENCE (Corporate Headquarters) is an ISO 17034 accredited Reference Material Producer. Please consult our website for a copy of our most recent certificate and scope of accreditation.

1.0 ACCREDITATION / REGISTRATION

INORGANIC VENTURES is accredited to ISO 17034, "General Requirements for the Competence of Reference Material Producers" and ISO/IEC 17025, "General Requirements for the Competence of Testing and Calibration Laboratories". Inorganic Ventures is also an ISO 9001 registered manufacturer (QSR Certificate Number QSR-1034).

2.0 PRODUCT DESCRIPTION

Product Code:	Single Analyte Mass Spec Solution
Catalog Number:	MSHG-10PPM
Lot Number:	P2-HG683300
Matrix:	10% (v/v) HCl
Value / Analyte(s):	10 µg/mL ea: Mercury
Starting Material:	Hg metal
Starting Material Lot#:	1959
Starting Material Purity:	99.9994%

3.0 CERTIFIED VALUES AND UNCERTAINTIES

Certified Value: 10.004 ± 0.066 µg/mL

Density: 1.020 g/mL (measured at 20 ± 4 ºC)

Assay Information:

ANALYTE	METHOD	NIST SRM#	SRM LOT#
Hg	ICP Assay	3133	061204
Hg	EDTA	928	928

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

Characterization of CRM/RM by Two or More Methods

Certified Value, $X_{CRM/RM}$, where two or more methods of characterization are used is the weighted mean of the results:

$X_{CRM/RM} = \Sigma(w_i)(X_i)$

X_i = mean of Assay Method i with standard uncertainty $u_{char\ i}$

w_i = the weighting factors for each method calculated using the inverse square of the variance:

$w_i = (1/u_{char\ i})^2 / (\Sigma(1/(u_{char\ i})^2)$

CRM/RM Expanded Uncertainty (±) = $U_{CRM/RM} = k\,(u^2_{char} + u^2_{bb} + u^2_{lts} + u^2_{ts})^{½}$

k = coverage factor = 2

$u_{char} = [\Sigma((w_i)^2\,(u_{char\ i})^2)]^{½}$ where $u_{char\ i}$ are the errors from each characterization method

u_{bb} = bottle to bottle homogeneity standard uncertainty

u_{lts} = long term stability standard uncertainty (storage)

u_{ts} = transport stability standard uncertainty

Characterization of CRM/RM by One Method

Certified Value, $X_{CRM/RM}$, where one method of characterization is used is the mean of individual results:

$X_{CRM/RM} = (X_a)\,(u_{char\ a})$

X_a = mean of Assay Method A with

$u_{char\ a}$ = the standard uncertainty of characterization Method A

CRM/RM Expanded Uncertainty (±) = $U_{CRM/RM} = k\,(u^2_{char\ a} + u^2_{bb} + u^2_{lts} + u^2_{ts})^{½}$

k = coverage factor = 2

$u_{char\ a}$ = the errors from characterization

u_{bb} = bottle to bottle homogeneity standard uncertainty

u_{lts} = long term stability standard uncertainty (storage)

u_{ts} = transport stability standard uncertainty

4.0 TRACEABILITY TO NIST

- This product is traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM/RM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRM/RM are available, the term 'in-house std.' is specified.

4.1 Thermometer Calibration

- All thermometers are NIST traceable through thermometers that are calibrated by an accredited calibration laboratory.

4.2 Balance Calibration

- All analytical balances are calibrated by an accredited calibration laboratory and procedure. The weights used for testing are annually compared to master weights and are traceable to NIST.

4.3 Glassware Calibration

- An in-house procedure is used to calibrate all Class A glassware used in the manufacturing and quality control of CRM/RMs.

5.0 TRACE METALLIC IMPURITIES (TMI) DETERMINED BY ICP-MS AND ICP-OES (µg/mL)

CRM/RMs are tested for trace metallic impurities by Axial ICP-OES and ICP-MS. The result from the most sensitive method for each element, is reported below. Solutions tested by ICP-MS were analyzed in an ULPA-Filtered Clean Room. An ULPA-Filter is 99.9985% efficient for the removal of particles down to 0.3 µm.

M - Checked by ICP-MS O - Checked by ICP-OES i - Spectral Interference
n - Not Checked For s - Solution Standard Element

6.0 INTENDED USE

- For the calibration of analytical instruments and validation of analytical methods as appropriate.

7.0 INSTRUCTIONS FOR THE CORRECT USE OF THIS REFERENCE MATERIAL

7.1 Storage and Handling Recommendations

- Store between approximately 4° - 30° C while in sealed TCT bag.

- While stored in the sealed TCT bag, transpiration of this CRM/RM is negligible. After opening the sealed TCT bag transpiration of the CRM/RM will occur, resulting in a gradual increase in the analyte concentration(s). It is the responsibility of the user to account for this effect. When the bottle is weighed both before and after being placed in storage, the mass difference observed will be a measure of transpiration mass loss.

- After opening the sealed TCT bag, keep cap tightly sealed when not in use and store between 4° - 24° C to minimize the effects of transpiration. Use at 20° ± 4° C to minimize volumetric dilution error when using the reported density. Do not pipette from the container. Do not return removed aliquots to container.

- For more information, visit **www.inorganicventures.com/TCT**

Atomic Weight; Valence; Coordination Number; Chemical Form in Solution - 200.59 +2 4 Hg(OH)(aq) 1+
Chemical Compatibility - Stable in HNO3. Avoid basic media forming insoluble carbonate. The sulfide, basic carbonate, oxalate, phosphate, arsenite, arsenate and iodide are insoluble in water.
Stability - 2-100 ppb levels not stable in 1% HNO3 / LDPE container, stable in 10% HNO3 packaged in borosilicate glass. 1-100 ppm levels stable in 7% HNO3 packaged in borosilicate glass. 1000-10,000 ppm solutions are chemically stable for years in 5-10% HNO3 / LDPE container.
Hg Containing Samples (Preparation and Solution) - Metal (soluble in HNO3); Oxide (Soluble in HNO3); Ores and Organic based (The literature has more references to the preparation of Hg containing samples than any other element. Please consult the literature for your specific sample type, since such preparations are prone to error. Or e-mail our technical staff and we will contact you to discuss your particular sample preparation questions in further detail.).
Atomic Spectroscopic Information (ICP-OES D.L.s are given as radial/axial view):

Technique/Line	**Estimated D.L.**	**Order**	**Interferences** (underlined indicates severe)
ICP-MS 202 amu	9 ppt	n/a	186W16O

ICP-OES 194.227 nm	0.03 / 0.005 µg/mL	1	V
ICP-OES 253.652 nm	0.1 / 0.03 µg/mL	1	Ta, Co, Th ,Rh , Fe, U

8.0 HAZARDOUS INFORMATION

- Please refer to the Safety Data Sheet for information regarding this CRM/RM.

9.0 HOMOGENEITY

- This solution was mixed according to an in-house procedure and is guaranteed to be homogeneous. Homogeneity data indicate that the end user should take a minimum sample size of 0.2 mL to assure homogeneity.

10.0 QUALITY STANDARD DOCUMENTATION

10.1 ISO 9001 Quality Management System Registration

- QSR Certificate Number QSR-1034

10.2 ISO/IEC 17025 "General Requirements for the Competence of Testing and Calibration Laboratories"

- Chemical Testing - Accredited / A2LA Certificate Number 883.01

10.3 ISO 17034 "General Requirements for the Competence of Reference Material Producers"

- Reference Material Producer - Accredited / A2LA Certificate Number 883.02

Inorganic Ventures, 300 Technology Drive, Christiansburg, Va. 24073, USA; Telephone: 800.669.6799; 540.585.3030, Fax: 540.585.3012; inorganicventures.com; info@inorganicventures.com

11.0 CERTIFICATION, LOT EXPIRATION AND PERIOD OF VALIDITY

11.1 Certification Issue Date

September 28, 2019

- The certification is valid within the measurement uncertainty specified provided the CRM/RM is stored and handled in accordance with instructions given in Sec 7.1. This certification is nullified if instructions in Sec 7.1 are not followed or if the CRM/RM is damaged, contaminated, or otherwise modified.

11.2 Lot Expiration Date

- **September 28, 2023**

- The date after which this CRM/RM should not be used.

- The lot expiration date reflects the period of time that the stability of a CRM/RM can be supported by long term stability studies conducted on properly stored and handled CRM/RMs. Lot expiration is limited primarily by transpiration (loss of water from the solution) and infrequently by chemical stability.

11.3 Period of Validity

- Sealed TCT Bag Open Date: _____

- This CRM/RM should not be used longer than one year (or six months in the case of a 30 mL bottle) from the date of opening the aluminized bag or after the date given in Sec. 11.2, whichever comes first. This is contingent upon the CRM/RM being stored and handled in accordance with the instructions given in Sec. 7.1.

CERTIFICATE OF ANALYSIS

VHG Labs Quality Product

Single-Element Aqueous CRM

Rec'd 1 Bottle
expires 9-16-20

Chromium (Cr) – 1000 µg/mL

Product #: VHG-PCRN-100

Matrix: 5% HNO_3

Lot #: 975466-43

Element	Certified Concentration & Uncertainty
Cr	1003 ± 3 µg/mL (w/v)
	994 ± 3 µg/g (w/w)

Intended Use: This solution is intended for use as a certified reference material (CRM) or calibration standard for inductively coupled plasma optical emission spectroscopy (ICP-OES), inductively coupled plasma mass spectrometry (ICP-MS), flame or furnace atomic absorption spectroscopy (AA or GFAA), and other techniques for elemental analysis.

Certification & Traceability: VHG Labs CRMs are manufactured, processed, and certified under a quality management system that is registered/accredited to **ISO 9001**, **ISO Guide 34**, and **ISO/IEC 17025**. This CRM was prepared to a nominal concentration of 1000 µg/mL by gravimetric methods using 99.996% pure chromium (Cr) metal dissolved in high purity nitric acid (HNO_3) and diluted with filtered (0.22µm), 18 M-ohm deionized water. The balances used in the preparation of VHG CRMs are calibrated regularly with traceability to NIST, using a calibration provider that is accredited to ISO/IEC 17025 by a mutually recognized accreditation body. All volumetric dilutions are performed in Class A calibrated glassware. The certified concentration and uncertainty were determined by VHG using the "High Performance ICP-OES" protocol developed by NIST (visit www.lgcstandards.com/HP-ICP-OES for further information), and both the certified concentration and uncertainty values are traceable to **NIST SRM 3112a, lot #030730**. The uncertainty associated with the certified concentration represents the expanded uncertainty at the 95% confidence level using a coverage factor of k=2. The expanded uncertainty will increase at a rate of 0.008% per month after the Stable-Pak™ bag is opened.

Indicative Values: ICP-MS was used to determine trace metal concentrations for this product (nd = not determined).

Instructions for Use: We recommend that the solution be thoroughly mixed by repeated shaking or swirling of the bottle immediately prior to use. To achieve the highest accuracy, the analyst should: (1) use only pre-cleaned containers and transferware, (2) not pipette directly from the CRM's original container, (3) never pour used product back into the original container, (4) make dilutions using calibrated balances or certified class A volumetric flasks and pipettes, (5) use a minimum sub-sample size of 500 µL, and (6) dilute with the same matrix as the original CRM or other chemically suitable matrix. The solution should be kept tightly capped and stored under normal laboratory conditions. Do not freeze, heat, or immerse the bottle or its contents, and avoid exposure to direct sunlight or moisture.

Period of Validity: LGC ensures the accuracy of this solution for **24 months** from the certification date shown below or **12 months** from the date the Stable-Pak™ bag is opened, provided the instructions for use are followed. During the period of validity, the purchaser will be notified if this product is recalled due to any significant changes in the stability of the solution.

REPORT OF ANALYSIS

Single-Element Aqueous RM

Mercury (Hg) – 1000 µg/mL

Matrix: 2% HNO_3

Product #: S4400-1000331 PE9471

Lot #: 1009904-41

Element	Certified Concentration
Hg	999 µg/mL (w/v)
	983 µg/g (w/w)

Intended Use: This solution is intended for use as a reference material (RM) or calibration standard for inductively coupled plasma optical emission spectroscopy (ICP-OES), inductively coupled plasma mass spectrometry (ICP-MS), flame or furnace atomic absorption spectroscopy (AA or GFAA), and other techniques for elemental analysis.

Certification & Traceability: This RM was manufactured, processed, and/or certified under a quality management system that is registered/accredited to **ISO 9001**, **ISO Guide 34**, and **ISO/IEC 17025**. This RM was prepared to a nominal concentration of 1000 µg/mL by gravimetric methods using 99.999% pure mercury (Hg) metal dissolved in high purity nitric acid (HNO_3) and diluted with filtered (0.22 µm), 18 M-ohm deionized water. The balances used in the preparation of this RM are calibrated regularly with traceability to NIST, using a calibration provider that is accredited to ISO/IEC 17025 by a mutually recognized accreditation body. All volumetric dilutions are performed in Class A calibrated glassware. The certified concentration was determined based upon gravimetric procedures. Secondary verification of the certified concentration was performed using ICP-OES and is traceable to **NIST SRM 3133**. The uncertainty associated with the certified concentration is ±0.5% relative, which is the sum of the estimated errors due to the purity of the raw materials, the gravimetric preparation of the solution, and transpiration through the container. This represents the expanded uncertainty at the 95% confidence level using a coverage factor of k=2.

Indicative Values: ICP-MS was used to determine trace metal concentrations for this product (nd = not determined).

Trace Concentrations (µg/L)

Ag	<0.5	Co	<1	Ge	<0.5	Lu	<0.2	P	<100	Sb	<0.5	Te	<1

Ce	<0.2	Gd	<0.2										

Instructions for Use: We recommend that the solution be thoroughly mixed by repeated shaking or swirling of the bottle immediately prior to use. To achieve the highest accuracy, the analyst should: (1) use only pre-cleaned containers and transferware, (2) not pipette directly from the RM's original container, (3) never pour used product back into the original container, (4) make dilutions using calibrated balances or certified class A volumetric flasks and pipettes, (5) use a minimum sub-sample size of 500 µL, and (6) dilute with the same matrix as the original RM or other chemically suitable matrix. The solution should be kept tightly capped and stored under normal laboratory conditions. Do not freeze, heat, or immerse the bottle or its contents, and avoid exposure to direct sunlight or moisture.

Period of Validity: CPI International ensures the accuracy of this solution for **18 months** from the certification date shown below, provided the instructions for use are followed. During the period of validity, the purchaser will be notified if this product is recalled due to any significant changes in the stability of the solution.

Multi-Element Aqueous CRM

Custom Multi Standard 901-S1

Matrix: 5% HNO_3

Product #: VHG-ZLANLAB901-500

Lot #: 10037608-30 D, G, F

Element	Certified Concentration & Uncertainty	Element	Certified Concentration & Uncertainty	Element	Certified Concentration & Uncertainty
Al	5000 ± 25 µg/mL	Fe	5004 ± 25 µg/mL	Mg	5001 ± 25 µg/mL
Ca	5000 ± 25 µg/mL	K	5000 ± 25 µg/mL	Na	5000 ± 25 µg/mL

Intended Use: This solution is intended for use as a certified reference material or calibration standard for inductively coupled plasma optical emission spectroscopy (ICP-OES), inductively coupled plasma mass spectrometry (ICP-MS), or alternative techniques for elemental detection, such as flame or furnace atomic absorption spectroscopy (AA or GFAA).

Certification & Traceability: VHG CRMs are manufactured and certified under a quality management system that is accredited to **ISO 9001**, **ISO Guide 34** and **ISO/IEC 17025**. This CRM was prepared to the certified concentrations shown above by gravimetric methods using single-element concentrates that were certified using the "High Performance ICP-OES" protocol developed by NIST and are directly traceable to NIST SRMs. This solution was stabilized using high purity nitric acid (HNO_3) and diluted with filtered (0.22µm), 18 M-ohm deionized water. The balances used in the preparation of VHG CRMs are calibrated regularly with traceability to NIST. All volumetric dilutions are performed in Class A calibrated glassware. The certified concentrations were determined by VHG Labs based upon gravimetric procedures. Secondary verification of the certified concentrations was performed by VHG Labs using ICP-OES that was calibrated and/or referenced against **NIST SRMs** (see reverse side). The uncertainty associated with each certified concentration represents the expanded uncertainty at the 95% confidence level using a coverage factor of k=2.

Instructions for Use: We recommend that the solution be thoroughly mixed by repeated shaking or swirling of the bottle immediately prior to use. To achieve the highest accuracy the analyst should: (1) use only pre-cleaned containers and transferware, (2) not pipette directly from the CRM's original container, (3) use a minimum sub-sample size of 500µL, (4) make dilutions using calibrated balances or certified volumetric class A flasks and pipettes, (5) dilute with the same matrix as the original CRM, and (6) never pour used product back into the original container. The solution should be kept tightly capped and stored under normal laboratory conditions. Do not freeze, heat, or expose to direct sunlight. Minimize exposure to moisture or high humidity.

Period of Validity: VHG ensures the accuracy of this solution for **12 Months** from the Certification date shown below, provided the instructions for use are followed. During the period of validity, the purchaser will be notified if this product is recalled due to any significant changes in the stability of the solution.

Certificate of Analysis

Certified Reference Material

ISO 17034:2016 (RMP) Accreditation Certificate Number AR-1436

ISO/IEC 17025:2005 Accreditation Certificate Number AT-1529

Product Description:

Name:	ICP-MS Interference Check Standard 2
Part Number:	**ICP-MS-ICS-2-A-100**
Lot Number:	**2005507-100**
Matrix:	Tr HF + 5% HNO_3
Purity:	99.98% - 99.999%
Density:	1.059g/mL ± 0.002 g/mL @ 21.2°C

Certified Values:

Element	(mg/L)	SRM ID	Element	(mg/L)	SRM ID
Al	1000 ± 10	3101a	K	1000 ± 10	3141a
Ca	3000 ± 30	3109a	Na	2500 ± 25	3152a
Fe	2500 ± 25	3126a	S	1000 ± 10	3154
Mg	1000 ± 10	3131a	Ti	20.0 ± 0.2	3162a
Mo	20.0 ± 0.2	3134	C	2000[a]	*
P	1000 ± 10	3139a	Cl	20,000 ± 200	3182

Certified values are based on gravimetric and volumetric preparation, and verified against NIST SRM 3100 series when available via inductively coupled plasma optical emission spectrometry (ICP-OES) and/or inductively coupled plasma mass spectrometry (ICP-MS) and ion chromatography (IC) using an internal laboratory-developed method. The uncertainty in the certified value is calculated for a 95% confidence interval and coverage factor *k* is about 2.

* Refer to Traceability Information, Section d

[a] The carbon concentration is provided for reference only due to the nature of the element

Uncertified Values:

Trace Metal Impurity Scan: The data reported are based upon a scan of this specific lot via ICP-OES/ICP-MS analysis. The values are reported in µg/L.

Ag	< 0.3	Cd	< 0.5	Mn	20	Se	2	V	2

SCP SCIENCE

Providing Innovative Solutions to Analytical Chemists

5.0 INTENDED USE:

- ICP Standards: For the calibration of, including but not limited to: ICP-AES, ICP-MS, FAAS, GFAA, XRF and DCP.
- AA Standards: For the calibration of Flame (FAAS) and Graphite Furnace (GFAA) Atomic Absorption Spectrometers.
- Matrix Modifiers: For the optimization of analytical conditions to provide better Graphite Furnace Atomic Absorption (GFAA) instrument response and improved detection limits.
- pH Standards: For the calibrating pH meters or for other wet chemistry applications.
- Conductivity Standards: For electrolytic conductivity measurement as a calibration standard.
- IC Standards: for calibration of, but not limited to IC, HPLC, TLC, ISE, IR, NMR, MS, UV/VIS or other wet chemistry applications.

For any inquiries, please contact **SCP SCIENCE**.

6.0 INSTRUCTIONS FOR USE:

Handling and Storage: Keep product tightly capped when not in use. The solution should be opened for a minimum amount of time necessary to dispense the amount required. Do not pipet or use directly from container. Do not return unused portions back to container. Store under normal laboratory conditions. Avoid exposure to excessive sources of heat and humidity or direct sunlight.

Stability: This Standard is guaranteed to be stable and accurate to within the specified uncertainty of measurement up to the unopened expiry date, if sealed, or up to the opened expiry date (when indicated), whichever comes first, provided the solution is kept tightly capped and stored under the indicated storage conditions. Purchasers will be notified of any significant changes resulting in re-certification or withdrawal of the product prior to the expiration date.

7.0 HAZARDOUS INFORMATION :

Please refer to the associated Material Safety Data Sheet (MSDS) for information regarding this product (available at www.SCPSCIENCE.com).

8.0 HOMOGENEITY:

This solution has been blended according to an in-house procedure and its homogeneity is guaranteed to be fit for purpose when a sample size sufficient for the intended method of analysis is used.

9.0 TRACEABILITY:

This CRM (Certified Reference Material) is traceable to the NIST SRM (Standard Reference Material) indicated in section 2 through an unbroken chain of comparisons. In addition, balances used are regularly calibrated using weights which are traceable to NIST (National Institute of Standards and Technology) or NRC (National Research Council of Canada) standards. All conductivity meters used to analyze this standard have been regularly calibrated using a NIST or NRC traceable Thermometer and standards. All pH meters used to analyze this standard have been regularly calibrated using a NIST or NRC traceable thermometer and pH/MV simulator.

10.0 PREPARATION*:*

For the preparation of these solutions, 18 meghom/cm double deionized water, high-purity acids and glassware calibrated to ASTM Class A specifications are used.

11.0 QUALITY SYSTEM CERTIFICATIONS*:*

ISO 9001 Certification: This standard was produced in a facility which operates a **registered** ISO 9001 Quality Management System. Please consult our web site for a copy of the most recent revision of our certificate of registration.

ISO 17025 Accreditation: SCP SCIENCE (Corporate Headquarters) operates an ISO 17025 **accredited** laboratory. Please consult our web site for a copy of the most recent revision of our certificate and scope of accreditation.

ISO 17034 Accreditation: SCP SCIENCE (Corporate Headquarters) is an ISO 17034 accredited Reference Material Producer. Please consult our website for a copy of our most recent certificate and scope of accreditation.

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

Characterization of CRM/RM by Two or More Methods

Certified Value, $X_{CRM/RM}$, where two or more methods of characterization are used is the weighted mean of the results:

$X_{CRM/RM} = \Sigma(w_i)(X_i)$

X_i = mean of Assay Method i with standard uncertainty $u_{char\ i}$

w_i = the weighting factors for each method calculated using the inverse square of the variance

$w_i = (1/u_{char\ i})^2 / (\Sigma(1/(u_{char\ i})^2)$

CRM/RM Expanded Uncertainty (±) = $U_{CRM/RM} = k\ (u^2_{char} + u^2_{bb} + u^2_{lts} + u^2_{ts})^{1/2}$

k = coverage factor = 2

$u_{char} = [\Sigma((w_i)^2\ (u_{char\ i})^2)]^{1/2}$ where $u_{char\ i}$ are the errors from each characterization method

u_{bb} = bottle to bottle homogeneity standard uncertainty

u_{lts} = long term stability standard uncertainty (storage)

u_{ts} = transport stability standard uncertainty

Characterization of CRM/RM by One Method

Certified Value, $X_{CRM/RM}$, where one method of characterization is used is the mean of individual results:

$X_{CRM/RM} = (X_a)\ (u_{char\ a})$

X_a = mean of Assay Method A with

$u_{char\ a}$ = the standard uncertainty of characterization Method A

CRM/RM Expanded Uncertainty (±) = $U_{CRM/RM} = k\ (u^2_{char\ a} + u^2_{bb} + u^2_{lts} + u^2_{ts})^{1/2}$

k = coverage factor = 2

$u_{char\ a}$ = the errors from characterization

u_{bb} = bottle to bottle homogeneity standard uncertainty

u_{lts} = long term stability standard uncertainty (storage)

u_{ts} = transport stability standard uncertainty

4.0 TRACEABILITY TO NIST

- This product is traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM/RM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRM/RM are available, the term 'in-house std.' is specified.

4.1 Thermometer Calibration

- All thermometers are NIST traceable through thermometers that are calibrated by an accredited calibration laboratory.

4.2 Balance Calibration

- All analytical balances are calibrated by an accredited calibration laboratory and procedure. The weights used for testing are annually compared to master weights and are traceable to NIST.

4.3 Glassware Calibration

- An in-house procedure is used to calibrate all Class A glassware used in the manufacturing and quality control of CRM/RMs.

5.0 TRACE METALLIC IMPURITIES (TMI) DETERMINED BY ICP-MS AND ICP-OES (µg/mL)

N/A

6.0 INTENDED USE

- For the calibration of analytical instruments and validation of analytical methods as appropriate.

7.0 INSTRUCTIONS FOR THE CORRECT USE OF THIS REFERENCE MATERIAL

7.1 Storage and Handling Recommendations

- Store between approximately 4° - 30° C while in sealed TCT bag.

- While stored in the sealed TCT bag, transpiration of this CRM/RM is negligible. After opening the sealed TCT bag transpiration of the CRM/RM will occur, resulting in a gradual increase in the analyte concentration(s). It is the responsibility of the user to account for this effect. When the bottle is weighed both before and after being placed in storage, the mass difference observed will be a measure of transpiration mass loss.

- After opening the sealed TCT bag, keep cap tightly sealed when not in use and store between 4° - 24° C to minimize the effects of transpiration. Use at 20° ± 4° C to minimize volumetric dilution error when using the reported density. Do not pipette from the container. Do not return removed aliquots to container.

- For more information, visit **www.inorganicventures.com/TCT**

HF Note: This standard should not be prepared or stored in glass.

Low Silver Note: This solution contains "LOW" levels of Silver. Please store this entire bottle inside a sealed glass jar.

8.0 HAZARDOUS INFORMATION

- Please refer to the Safety Data Sheet for information regarding this CRM/RM.

9.0 HOMOGENEITY

- This solution was mixed according to an in-house procedure and is guaranteed to be homogeneous. Homogeneity data indicate that the end user should take a minimum sample size of 0.2 mL to assure homogeneity.

10.0 QUALITY STANDARD DOCUMENTATION

10.1 ISO 9001 Quality Management System Registration

- QSR Certificate Number QSR-1034

10.2 ISO/IEC 17025 "General Requirements for the Competence of Testing and Calibration Laboratories"

- Chemical Testing - Accredited / A2LA Certificate Number 883.01

10.3 ISO 17034 "General Requirements for the Competence of Reference Material Producers"

- Reference Material Producer - Accredited / A2LA Certificate Number 883.02

Inorganic Ventures, 300 Technology Drive, Christiansburg, Va. 24073, USA; Telephone 800.669.6799; 540 585 3030 Fax 540.585.3012; inorganicventures.com; info@inorganicventures.com

11.0 CERTIFICATION, LOT EXPIRATION AND PERIOD OF VALIDITY

11.1 Certification Issue Date

December 18, 2019

- The certification is valid within the measurement uncertainty specified provided the CRM/RM is stored and handled in accordance with instructions given in Sec 7.1. This certification is nullified if instructions in Sec 7.1 are not followed or if the CRM/RM is damaged, contaminated, or otherwise modified.

11.2 Lot Expiration Date

- December 18, 2023

- The date after which this CRM/RM should not be used.

- The lot expiration date reflects the period of time that the stability of a CRM/RM can be supported by long term stability studies conducted on properly stored and handled CRM/RMs. Lot expiration is limited primarily by transpiration (loss of water from the solution) and infrequently by chemical stability.

11.3 Period of Validity

- Sealed TCT Bag Open Date: _____

- This CRM/RM should not be used longer than one year (or six months in the case of a 30 mL bottle) from the date of opening the aluminized bag or after the date given in Sec. 11.2, whichever comes first. This is contingent upon the CRM/RM being stored and handled in accordance with the instructions given in Sec. 7.1.

Certified values are based on gravimetric and volumetric preparation, and verified against NIST SRM 3100 series when available via inductively coupled plasma optical emission spectrometry (ICP-OES and/or inductively coupled plasma mass spectrometry (ICP-MS) using an internal laboratory-developed method. The uncertainty in the certified value is calculated for a 95% confidence interval and coverage factor *k* is about 2.
* Refer to Traceability Information, Section 4

Packaging and Storage Conditions:

The standard is packaged in a pre-cleaned polyethylene bottle. To maintain the integrity of this product, the solution should be kept tightly capped and stored under normal laboratory conditions.

Expiration Information:

The expiry date is guaranteed to be valid for twelve months from the shipping date provided and is guaranteed through the month of expiration. For this reason, standards from the same lot may have different expiration dates.

Shipped Date: August 2019

Thermo Fisher Scientific's Quality System has been found to conform to Quality Management System Standard ISO9001:2015 by SAI Global Certificate Number CERT – 0120632

This is to certify that units of the lot number below were tested and found to comply with the specifications of the grade listed. Certain data have been supplied by third parties. Thermo Fisher Scientific expressly disclaims all warranties, expressed or implied, including the implied warranties of merchantability and fitness for a particular purpose. Products are for research use or further manufacturing. Not for direct administration to humans or animals. It is the responsibility of the final formulator and end user to determine suitability based upon the intended use of the end product. Products are tested to meet the analytical requirements of the noted grade. The following information is the actual analytical results obtained.

Catalog Number	A300	Quality Test / Release Date	08/06/2019
Lot Number	193876		
Description	SULFURIC ACID, CERTIFIED ACS		
Country of Origin	United States	Suggested Retest Date	Aug/2024
Chemical Origin	Inorganic-non animal		
BSE/TSE Comment	No animal products are used as starting raw material ingredients, or used in processing, including lubricants, processing aids, or any other material that might migrate to the finished product.		
Chemical Comment			

N/A			
Result Name	Units	Specifications	Test Value
APPEARANCE		REPORT	COLORLESS AND FREE FROM INSOLUBLE MATTER
ALUMINUM	ppm	<= 0.2	<0.1
ZINC (Zn)	ppm	<= 0.2	<0.1
ARSENIC (As)	ppm	<= 0.004	<0.001
ASSAY	w/w %	Inclusive Between 95.0 - 98.0	96.1
BORON (B)	ppm	<= 0.05	<0.05
CALCIUM (Ca)	ppm	<= 0.3	<0.1
CHLORIDE	ppm	<= 0.1	<0.1
CHROMIUM (Cr)	ppm	<= 0.2	<0.1
COLOR	APHA	<= 10	<10
COPPER (Cu)	ppm	<= 0.1	<0.1
GOLD (Au)	ppm	<= 0.3	<0.1
HEAVY METALS (as Pb)	ppm	<= 0.8	<0.005
IDENTIFICATION	PASS/FAIL	= PASS TEST	PASS TEST
IRON (Fe)	ppm	<= 0.2	<0.2
SUBSTANCES REDUCING KMNO4	ppm	<= 2	<2
LEAD (Pb)	ppm	<= 0.3	<0.1
MAGNESIUM (Mg)	ppm	<= 0.3	<0.1
MANGANESE (Mn)	ppm	<= 0.2	<0.1
MERCURY (Hg)	ppb	<= 5	<5
NICKEL (Ni)	ppm	<= 0.1	<0.1

Note: The data listed is valid for all package sizes of this lot of this product, expressed as an extension of this catalog number listed above.
If there are any questions with this certificate, please call at (800) 227-6701.
*Based on suggested storage condition.

Lab Name: Eurofins Lancaster Laboratories E Job No.: 410-10696-1

SDG No.:

Lab File ID: YG21T01.D BFB Injection Date: 08/21/2020

Instrument ID: 9355 BFB Injection Time: 08:14

Analysis Batch No.: 35697

M/E	ION ABUNDANCE CRITERIA	% RELATIVE ABUNDANCE	
95	Base Peak, 100% relative abundance	100.0	
96	5.0 - 9.0 % of mass 95	6.9	
173	Less than 2.0 % of mass 174	0.2	(0.3) 1
174	Greater than 50% of mass 95	90.7	
175	5.0 - 9.0 % of mass 174	6.6	(7.2) 1
176	95.0 - 101.0 % of mass 174	86.3	(95.2) 1
177	5.0 - 9.0 % of mass 176	5.7	(6.6) 2

1-Value is % mass 174 2-Value is % mass 176

THIS CHECK APPLIES TO THE FOLLOWING SAMPLES, MS, MSD, BLANKS AND STANDARDS:
