

Casmalia Resources Superfund Site

Pacific Ocean

SEMS-RM DOCID # 100000900

Location & Setting:

- 252-acre hazwaste disposal site
- 10 miles SW of Santa Maria
- 1.5 miles N of Casmalia
- 4 miles from Pacific Coast
- 8 miles NW of Vandenberg AFB

View northeast from RCF Pond, one of five onsite ponds used to manage stormwater. Hillside contains five landfills; four have been capped during interim actions. Ponds show white salt build-up from evaporation of brackish water during recent California drought (2016).

Aerial photo (1984) shows historic site layout. Multiple former waste management units (WMUs) included landfills, spreading areas, pits, ponds, and trenches used for hazardous waste disposal.

Aerial photo showing site following capping of four of the five landfills in 2002 and reconsolidation of former waste management units (WMUs)

View northeast from RCF Road. Three landfills (metals, caustics/cyanides, acids) on hillside have been capped. RCF (runoff control facility) pond contains stormwater runoff which must be managed onsite.

RCRA Canyon, looking south toward Pond A-5 and A-Series Pond .

Installation of RCRA cap on metals landfill as part of early action work in 2002. Caustics/Cyanide Landfill appears in background.
