Overview

The sample set for NASA-Ames, SDG WH19014, consisted of two (2) aqueous samples. All samples were analyzed for polyfluoroalkyl substances (PFAS).

The samples were collected by Tetra Tech, Inc. on August 18, 2021 and analyzed by Pace Analytical Services. All analyses were conducted in accordance with Department of Defense ((DOD)/Department of Energy (DOE) Quality Systems Manual (QSM) for Environmental Laboratories, Version 5.3, PFAS using LC/MS/MS Appendix B Table B-15 (2019). The data contained in this SDG was validated via EPA Stage 4 with regard to the following parameters:

*	• Data completeness
	• Hold times/Sample Preservation
*	• Mass Calibration
*	• LC/MS/MS System Tuning and Performance
*	• Mass Spectral Acquisition Rate
*	• Instrument Sensitivity Check
*	• Ion Transition Check
*	• Ion Ratios
*	• Initial/Continuing Calibrations
	• Laboratory Instrument / Preparation / Field Blank Results
	• Extraction Internal Standard Recoveries
*	• Laboratory Control Sample Results
*	• Compound Identification
*	• Compound Quantitation
*	• Detection Limits

The symbol (*) indicates that all quality control criteria were met for this parameter. Qualified analytical results are presented in Appendix A, results as reported by the laboratory are presented in Appendix B, and documentation supporting these findings is presented in Appendix C.

PFAS

Detected results reported below the limit of quantitation (LOQ) but above the Detection Limit (DL) were qualified as estimated, (J).

The fourteen day sample collection to preparation was exceeded by eleven days for samples AOPC14-SW01-EF-081821 and AOPC14-SW01-IN-081821. The detected and nondetected results reported in the affected samples were qualified as estimated (J) and (UJ), respectively.

The extracted internal standard recovery for 13C2-6:2FTS was above the quality control limit for sample AOPC14-SW01-IN-081821. The laboratory re-prepared the sample fourteen days past the fourteen day extraction hold time and the extracted internal standard recovery for 13C2-6:2FTS was above the quality control limit. The original analysis was used for validation. The detected result reported for 6:2 fluorotelomer sulfonate (6:2FTS) was qualified as estimated (J).

Additional Comments

Non-detected results were reported to the limit of detection (LOD).

Instances of manual integrations were present in this data package. All manual integrations were documented by the laboratory and are noted in the raw data of the original data package.

A detected result for PFOS (1.5 ng/L) was present in the method blank. All samples were affected. No validation actions were required as all affected results were reported at least five times above the blank result.

The extracted internal standard recovery for 13C2-6:2FTS was above the quality control limits for sample AOPC14-SW01-EF-081821. No validation action was required as the result reported for 6:2FTS in the affected sample was nondetected.

Executive Summary

Laboratory Performance Issues: The samples were extracted outside of the fourteen day hold time. Two extracted internal standard recoveries were outside the quality control limits.

Other Factors Affecting Data Quality: Detected results below the LOQ were estimated..

The data for these analyses were reviewed with reference to the Department of Defense (DOD) document entitled “Data Validation Guidelines Module 3: Data Validation Procedure for Per- and Polyfluoroalkyl Substances Analysis be QSM Table B15” (May 1, 2020). The text of this report has been formulated to address only those areas affecting data quality.

Data Qualifier Definitions

The following definitions provide brief explanations of the validation qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the adjusted detection limit.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample (due either to the quality of the data generated because certain quality control criteria were not met, or the concentration of the analyte was below the reporting limit).
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for, but was not detected. The reported detection limit is approximate and may be inaccurate or imprecise.
NJ	The analyte has been “tentatively identified” or “presumptively” as present and the associated numerical value is the estimated concentration in the sample.
R	The sample result (detected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
UR	The sample result (nondetected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team, but exclusion of the data is recommended.

The continuing calibration verification (CCV) associated with samples WH19014-001, WH19014-002 was outside of criteria for the following analytes: 4:2 and 6:2FTS surrogates/EIS recovered high. Associated target analytes recovered within limits The data has been reported.

Surrogate recovery for the following sample was outside the upper control limit: WH19014-001. This sample did not contain any target analytes; therefore, re-extraction and/or re-analysis was not performed.

Surrogate recovery for the following sample was outside control limits: WH19014-002. Re-extraction and/or re-analysis was performed with concurring results outside of holding time. Both sets of data have been reported.

The method blank associated with batch 15107 had PFOS detected at a concentration that was above the MDL but below ½ the PQL. All samples associated with this method blank that have detections for PFOS have been flagged with a "B".

Overview

The sample set for NASA-Ames, SDG WK24009, consisted of four (4) aqueous samples. All samples were analyzed for polyfluoroalkyl substances (PFAS).

The samples were collected by NASA on November 12, 2021 and analyzed by Pace Analytical Services. All analyses were conducted in accordance with Department of Defense ((DOD)/Department of Energy (DOE) Quality Systems Manual (QSM) for Environmental Laboratories, Version 5.3, PFAS using LC/MS/MS Appendix B Table B-15 (2019). The data contained in this SDG was validated via EPA Stage 4 with regard to the following parameters:

* • Data completeness
* • Hold times/Sample Preservation
* • Mass Calibration
* • LC/MS/MS System Tuning and Performance
* • Mass Spectral Acquisition Rate
* • Instrument Sensitivity Check
* • Ion Transition Check
* • Ion Ratios
• Initial/Continuing Calibrations
• Laboratory Instrument / Method Blank Results
• Extraction Internal Standard Recoveries
* • Laboratory Control Sample Results
• Matrix Spike Results
• Laboratory Duplicate Results
* • Compound Identification
* • Compound Quantitation
* • Detection Limits

The symbol (*) indicates that all quality control criteria were met for this parameter. Qualified analytical results are presented in Appendix A, results as reported by the laboratory are presented in Appendix B, and documentation supporting these findings is presented in Appendix C.

Detected results reported below the limit of quantitation (LOQ) but above the Detection Limit (DL) were qualified as estimated, (J).

The matrix spike (MS) percent recovery for perfluorooctadecanoic acid (PFODA) was below the quality control limits for sample SBOF-P-111221. The nondetected result reported for PFODA in the affected sample was qualified as estimated (UJ).

Laboratory duplicate imprecision (relative percent difference greater than 20%) was noted for 6:2 fluorotelomer sulfonate (6:2FTS), perfluorobutanesulfonic acid (PFBS), perfluoroheptanoic acid (PFHpA), perfluorononanoic acid (PFNA), pentadecafluorooctanoic acid (PFOA) and perfluoropentanoic acid (PFPeA) for sample B191-P-111221. The detected results reported for these compounds in the affected sample were qualified as estimated (J).

The extracted internal standard recoveries for 13:C2-4:2FTS, 13C4-PFBA and 13C5-PFHxA were below the 50% quality control limit but greater than the 20% quality control limit for sample SWRP-P-111221. All other extracted internal standard recoveries were below the 20% quality control limit. The laboratory did not re-extract the sample. The detected results reported for perfluorobutanoic acid (PFBA) and perfluorohexanoic acid (PFHxA) were qualified as estimated biased high (J+). The nondetected result reported for 4:2 fluorotelomer sulfonate (4:2FTS) was qualified as estimated (UJ). The detected and nondetected results reported for the remaining compounds were qualified (X) and (UX), respectively.

The continuing calibration verifications performed on instrument LCMSMS01 on 12/10/2021 at 19:51 and 22:09 had percent recoveries below the 70% quality control limit for 10:2 fluorotelomer sulfonate (10:2FTS). All samples were affected. The nondetected results reported for 10:2FTS were qualified as estimated (UJ).

Additional Comments

The laboratory reported a sample ID as B1914-P-111221. The chain of custody listed the sample as B191-P-111221. The validator amended the Form I and electronic deliverable to match the chain of custody.

Non-detected results were reported to the limit of detection (LOD).

Instances of manual integrations were present in this data package. All manual integrations were documented by the laboratory and are noted in the raw data of the original data package.

The compounds perfluorohexanesulfonic acid (PFHxS) and perfluorooctanesulfonic acid (PFOS) for sample B191-P-111221 were analyzed at a 5X dilution.

A detected result for perfluorohexadecanoic acid (PFHxDA) (9.2049 ug/L) was present in the instrument blank analyzed on 12/10/2021. All samples were affected. No validation actions were required as all affected results were nondetects.

Executive Summary

Laboratory Performance Issues: Several extracted internal standard recoveries were below the quality control limits. Laboratory duplicate imprecision was noted for several compounds. Two continuing calibration percent recoveries were below the quality control limits.

Other Factors Affecting Data Quality: Detected results below the LOQ were estimated. One MS percent recovery was outside the quality control limits.

The data for these analyses were reviewed with reference to the Department of Defense (DOD) document entitled “Data Validation Guidelines Module 3: Data Validation Procedure for Per- and Polyfluoroalkyl Substances Analysis be QSM Table B15” (May 1, 2020). The text of this report has been formulated to address only those areas affecting data quality.

Data Qualifier Definitions

The following definitions provide brief explanations of the validation qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the adjusted detection limit.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample (due either to the quality of the data generated because certain quality control criteria were not met, or the concentration of the analyte was below the reporting limit).
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for, but was not detected. The reported detection limit is approximate and may be inaccurate or imprecise.
NJ	The analyte has been “tentatively identified” or “presumptively” as present and the associated numerical value is the estimated concentration in the sample.
R	The sample result (detected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
UR	The sample result (nondetected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team, but exclusion of the data is recommended.

Case Narrative
BB&E, Inc.
Lot Number: WK24009

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved The NELAC Institute (TNI) standards, the Pace Analytical Services, LLC ("Pace") Laboratory Quality Manual, standard operating procedures (SOPs), and Pace policies. Additionally, the DoD QSM version 5.3 has been followed for these samples, and specifically Table B-15 was followed for all PFAS samples. Any exceptions to the TNI standards, the Laboratory Quality Manual, SOPs, the DoD QSM, or policies are qualified on the results page or discussed below.

Pace is a TNI accredited laboratory; however, the following analyses are currently not listed on our TNI scope of accreditation:

Biological Tissue: All, Non-Potable Water: SGT-HEM EPA 1664B, Silica EPA 200.7, Boron, Calcium, Silicon, Strontium EPA 200.8, Bicarbonate, Carbonate, and Hydroxide Alkalinity SM 2320 B-2011, Fecal Coliform SM 9221 C E-2006 & SM 9222D-2006, Strontium SW-846 6010D, VOC SM 6200 B-2011, Drinking Water: VOC (excluding BTEX, MTBE, Naphthalene, & 1,2-dichloroethane) EPA 524.2, Solid Chemical Material: TOC Walkley-Black.

If you have any questions regarding this report please contact the Pace Project Manager listed on the cover page.

Sample Notes:

Sample matrix for the listed samples prevented full volume from being extracted, precluding method mandated bottle rinse. Elution solvent was aliquoted directly into the reservoir, rinsing the inside. Recoveries for the Surrogates (SUR; Extracted Internal Standard/EIS) were outside control limits for the first listed sample. As evidence of matrix interference is present, re-extraction/re-analysis was not performed. Results for the first listed sample are qualified “Q”.

WK24009-004 (B1914-P-111221) (Run 1) (Analysis Batch 25247) (Prep Batch 24928) Comprehensive List PFAS by Isotope Dilution (DOD)

The continuing calibration verification (CCV) associated with the listed samples exceeded limits with a positive bias for the 6:2 FTS surrogate (SUR; Extracted Internal Standard/EIS). The associated target analyte passed; therefore, the data has been reported.

6:2 FTS surrogate (SUR; Extracted Internal Standard/EIS) recovery for the method blank (MB) associated with the listed samples exceeded the upper control limit. The MB did not contain the associated target analyte; therefore, re-extraction/re-analysis was not performed.

Correction factors (CF) are used to calculate the original sample concentration. The CF is the inverse of the concentration factor (sample volume / extract final volume) times the dilution factor (DF). For undiluted analysis. For undiluted analysis, the extract is prepared for injection by adding 182 uL of sample extract + 8 uL of reagent water + 10 uL of internal standard solution to a polypropylene autosampler vial. An extra correction factor of 0.91 (182 uL / 200 uL = 0.91) applies. The CF is calculated as follows:

CF = DF * FV / Vo

FV is volume of extract (mL)
Vo is initial sample volume (mL)
DF is dilution factor. For undiluted analysis, DF = 1/0.91.

Sample concentration for aqueous samples:
Concentration (ng/L) = Cs*CF,

$$C_s = \frac{\left(\frac{(A_s x C_{is})}{A_{is}}\right) - B}{M1}$$

Where

Cs is on column concentration of target analyte in the sample (ng/L)
Cis is concentration of internal standard in the sample (ng/L)
As is peak response of target analyte in the sample
Ais is peak response of internal standard in the sample
M1 is the average RF from ICAL or the slope from linear regression ICAL
B is the y-intercept from the ICAL

TABLE 2-23: SUMMARY OF WATER ANALYTICAL RESULTS COMPARED WITH SCREENING CRITERIA FOR AOPC 26

PFAS Site Inspection for the Ames Research Center

Notes:

1 Values calculated using non-detects at 1/2 the limit of detection

2 Screening values are USEPA RSLs (May 2022) (HQ = 0.1), which includes the 6 PFAS compounds referenced in the table.

3 GW ESL = Maximum Contaminant Level (MCL), Priority Environmental Screening Levels (ESL) for direct exposure human health risk in water (Regional Water Board 2020).
