PROFESSIONAL ENGINEER CERTIFICATION

This Per- and Polyfluoroalkyl Substances Site Inspection Report for Ames Research Center in Mountain View, California, dated August 2022, has been prepared by or under the responsible supervision, direction, or control of the California-licensed Professional Engineer whose signature and seal appears below.

Kevin Bricknell
California P.E. License No. C 58829

TABLE OF CONTENTS

Section	Title	Page
PROFESSIONAL ENGINEER CERTIFICATION		**iii**
EXECUTIVE SUMMARY		**ES-1**
SECTION 1	**INTRODUCTION**	**1-1**
1.1	OBJECTIVES	1-1
1.2	REPORT ORGANIZATION	1-3
SECTION 2	**PFAS OVERVIEW**	**2-1**
2.1	PFAS BACKGROUND	2-1
2.2	PFAS HEALTH EFFECTS AND ADVISORY LEVELS	2-2
2.2.1	USEPA Health Based Values for PFAS	2-2
2.2.2	California Health-Based Values for PFAS	2-5
2.3	PFAS SCREENING LEVELS AND DATA EVALUATION	2-6
SECTION 3	**FACILITY BACKGROUND AND HISTORY**	**3-1**
3.1	PHYSICAL SETTING	3-1
3.2	FACILITY HISTORY	3-1
3.3	RESTORATION PROGRAM AT ARC	3-2
3.3.1	Navy Installation Restoration Sites	3-3
3.3.2	Middlefield-Ellis-Whisman Regional Plume	3-4
3.3.3	Orion Park Plume	3-5
3.3.4	EATS Plume	3-5
3.4	GEOLOGIC AND HYDROGEOLOGIC SETTING	3-6
3.5	HYDROLOGICAL SETTING	3-7
3.5.1	Groundwater	3-7
3.5.2	Stormwater	3-9
3.6	AOPCs AND ASSOCIATED FACILITIES DESCRIPTIONS	3-9
3.6.1	AOPC 1 – Former Firefighting Training Area (IR 10, 12, 20)	3-10
3.6.2	AOPC 2 – Crash Site (Sunnyvale Golf Course)	3-12
3.6.3	AOPC 3 – Hangars 2 and 3 (IR 7)	3-12
3.6.4	AOPC 4 – Former Engine Test Stand Area (IR 11)	3-13
3.6.5	AOPC 5 – Hangar N211 (within AOI 3, formerly AOI 12)	3-13
3.6.6	AOPC 6 – Hangar N248 (AOI 3 East)	3-14
3.6.7	AOPC 7 – Fire Department (Building 580)	3-15
3.6.8	AOPC 8 – Site 1 Runway Landfill (IR 1)	3-16
3.6.9	AOPC 9 – Site 2 Former Golf Course Landfill (IR 2)	3-17

TABLE OF CONTENTS (CONTINUED)

Section	Title	Page
3.6.10	AOPC 10 – Site 22 Landfill (IR 22)	3-17
3.6.11	AOPC 11 – Building 191 Pump Station	3-18
3.6.12	AOPC 12 – Stormwater Settling Basin/Eastern Diked Marsh (within IR 25)	3-19
3.6.13	AOPC 13 – NASA Groundwater Extraction Treatment System	3-19
3.6.14	AOPC 14 – Middlefield-Ellis-Whisman Groundwater Extraction Treatment System	3-20
3.6.15	AOPC 15 – West-Side Aquifers Treatment System (IR 28)	3-20
3.6.16	AOPC 16 – North Patrol Road Ditch (IR 21) and Northern Channel (IR 27)	3-21
3.6.17	AOPC 17 – Marriage Road Ditch (IR 3)	3-22
3.6.18	AOPC 18 – Lindbergh Avenue Storm Drain Ditch (AOI 6)	3-23
3.6.19	AOPC 19 – Stormwater Retention Pond (within IR 25)	3-23
3.6.20	AOPC 20 – Building N271 Industrial Wastewater Pretreatment Plant	3-24
3.6.21	AOPC 21 – Former Industrial Wastewater Surface Impoundments (IR 4)	3-24
3.6.22	AOPC 22 – Building N249 Outdoor Aerodynamic Research Facility	3-25
3.6.23	AOPC 23 – Hangar 4 (CANG) Building 662	3-25
3.6.24	AOPC 24 – Middlefield-Ellis-Whisman Plume	3-27
3.6.25	AOPC 25 – Orion Park Plume	3-28
3.6.26	AOPC 26 – Eastern Boundary (IR 5)	3-29
3.7	CONCEPTUAL SITE MODEL	3-30
3.7.1	Site Sources of PFAS	3-31
3.7.2	Transportation and Migration Pathways	3-32
3.7.3	Exposure Routes	3-32
3.7.4	Potential Receptors	3-34
SECTION 4	**FIELD ACTIVITIES**	**4-1**
4.1	MONITORING WELL INSTALLATION	4-2
4.2	SOIL SAMPLING	4-3
4.3	GROUNDWATER SAMPLING	4-3
4.4	SURFACE WATER SAMPLING	4-4
4.5	INFLUENT/EFFLUENT SAMPLES	4-5
4.6	INVESTIGATION-DERIVED WASTE MANAGEMENT	4-5
4.7	FIELD TASK MODIFICATIONS	4-5
SECTION 5	**ANALYTICAL RESULTS AND FINDINGS**	**5-1**
5.1	AOPC 1 – FORMER FIREFIGHTING TRAINING AREA (IR 10, 12, 20)	5-1
5.2	AOPC 2 – CRASH SITE (SUNNYVALE GOLF COURSE)	5-3

V/STOL	Vertical and/or short take-off and landing
VTDEC	Vermont Department of Environmental Conservation
WATS	West-Side Aquifers Treatment System

EXECUTIVE SUMMARY

This Site Inspection (SI) is part of an ongoing effort to identify sources and presence of per- and polyfluoroalkyl substances (PFAS) at the National Aeronautics and Space Administration (NASA) Ames Research Center (ARC) in Mountain View, California. Tetra Tech, Inc. (Tetra Tech) prepared this document for NASA. PFAS SI activities at ARC were conducted in accordance with the PFAS SI Work Plan (SIWP), but with some modifications, which are discussed in Section 4.7 of this report. The SIWP was included as an appendix to the ARC PFAS Preliminary Assessment (PA) Report (PAR) (Tetra Tech 2021a) and is also in Appendix A to this report for reference.

In May 2016, the United States Environmental Protection Agency (USEPA) issued a lifetime drinking water health advisory (HA) level for two PFASs (perfluorooctanoic acid [PFOA] and perfluorooctanesulfonic acid [PFOS]). In June 2022, USEPA Office of Land and Emergency Management issued interim updated drinking water lifetime HAs for PFOA and PFOS, and issued new lifetime drinking water HAs for perfluorobutanesulfonic acid (PFBS) and hexafluoropropylene oxide dimer acid (HFPO-DA), also known as GenX. Federal regional screening levels (RSLs) also have been established for soil and groundwater for PFOA, PFOS, PFBS, perfluorononanoic acid (PFNA), perfluorohexanesulfonic acid (PFHxS), and HFPO-DA. The purpose of RSLs is to aid in decision-making concerning Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) investigations, and to help make the determination if chemical levels in site media warrant further investigation based on these risk-based levels or no further investigation is needed. As such, the RSLs are appropriate to use as screening criteria for this PFAS SI. The most recent RSL table, issued in May 2022, was used for screening in this SI report.

In California as well, health-based advisory values for drinking water and screening levels for soil and groundwater have been developed for PFOA and PFOS. In July 2018, the California State Water Resources Control Board (CSWRCB) Division of Drinking Water (DDW) established drinking water Notification Levels (NLs) for PFOS and PFOA. Information on California's advisory and screening levels is included in this report.

A PFAS PA at ARC between 2019 and 2020 occurred as part of an Agency-wide effort to identify areas of potential concern (AOPCs) at NASA Centers/Facilities. A PAR/SIWP was generated by use of information gathered from literature searches (facility documents), web-based searches (aqueous film-forming foam [AFFF] manufacturer specifications and PFAS use, regulations, and health effects), and site interviews/reconnaissance. Potential PFAS sources at NASA ARC included areas where AFFF had been used (e.g., fire-fighting training areas, equipment test areas, crash sites, fire suppression systems, and storage and transfer areas), electroplating facilities, areas that had received waste (e.g., landfills, waste disposal areas, and water treatment systems), and other potential sources (e.g., certain detergents, aviation hydraulic fluids, and manufacture of photographic supplies).

The PAR/SIWP identified 23 on-site (AOPCs 1 through 23), two off-site AOPCs (AOPCs 24 and 25), and one on- or off-site source (AOPC 26) where PFAS could be a concern. At 12 AOPCs within ARC (AOPCs 1, 2, 5 through 7, 11, 12, 16 through 19, and 23), the primary source of PFAS was AFFF. AFFF use or releases resulted from firefighting training activities, aircraft crashes, accidental AFFF discharges at four hangars, use by the fire department's mobile AFFF units, and releases into four stormwater ditches and systems and two National Pollutant Discharge Elimination System (NPDES) stormwater discharge points. Non-AFFF sources with potential PFAS use or releases were identified at 12 AOPCs (AOPCs 3, 4, 8 through 10, 13 through 15, 20 through 22, and 26). Non-AFFF sources with potential PFAS use or releases included three former unlined landfills, five hydraulic fluid disposal or related-use sites, one fuel storage area, vapor and brine from an industrial wastewater pretreatment plant (IWPP), and three groundwater extraction systems that treat volatile organic compounds (VOCs) potentially commingled with PFAS.

Within a 1-mile radius of ARC, non-AFFF sources with a potential PFAS release were identified at three AOPCs (AOPCs 24 through 26) where semiconductor and metal finishing operations had occurred over the Middlefield-Ellis-Whisman (MEW) regional plume, a trichloroethene

(TCE) plume migrating from Orion Park, and where discharges of PFAS could have come from the adjacent Lockheed Martin facility.

Multiple parties may be associated with the PFAS levels found at each AOPC. This includes the on-site Potentially Responsible Parties (PRPs) NASA, the California Air National Guard (CANG), and the Navy. It also includes off-site PRPs such as the MEW PRPs and Lockheed Martin. A PRP analysis is recommended to help determine responsibility and allocation of future investigation costs based on past history and information presented in this SI report.

The PAR/SIWP detailed project objectives, field inspection rationale and methodology, and reporting requirements for the SI. The SIWP recommended sampling all 26 AOPCs identified as potential PFAS source areas at ARC. These areas were selected based on known historical or suspected use of AFFF and/or protein-based foams, other sources of PFAS, and PFAS data previously collected at NASA ARC. The primary objectives of the SI were to inspect each identified potential source area for presence of PFAS as outlined in the SIWP, compare PFAS concentrations to screening levels (as applicable), and determine whether further investigation would be warranted. SI results will guide additional investigations and potential actions to mitigate exposure to PFAS-containing media. Areas recommended for SI included:

- AOPC 1 – Former Firefighting Training Area (Installation Restoration [IR] 10, 12, and 20)
- AOPC 2 – Crash Site (Sunnyvale Golf Course)
- AOPC 3 – Hangars 2 & 3 (IR 7)
- AOPC 4 – Former Engine Test Stand Area (IR 11)
- AOPC 5 – Hangar N211 (within Area of Interest [AOI] 3, formerly AOI 12)
- AOPC 6 – Hangar N248 (AOI 3 East)
- AOPC 7 – Fire Department (Building 580)
- AOPC 8 – Site 1 Runway Landfill (IR 1)
- AOPC 9 – Site 2 Former Golf Course Landfill (IR 2)
- AOPC 10 – Site 22 Landfill (IR 22)
- AOPC 11 – Building 191 Pump Station
- AOPC 12 – Stormwater Settling Basin/Eastern Diked Marsh (EDM) (within IR 25)
- AOPC 13 – NASA Groundwater Extraction Treatment System (GWETS)

- AOPC 14 – MEW GWETS

Tetra Tech conducted field activities supporting the SI from July 7 to August 18, 2021. Sampled media included soil (surface and subsurface [from surface to 2 feet below ground surface {bgs}]), groundwater (existing and new permanent monitoring wells), and influent/effluent of water treatment systems. BB&E later performed surface water sampling on November 12, 2021, when sufficient precipitation allowed accumulation of enough surface water for adequate sample collection. Tetra Tech received surface water data for inclusion in this report. Pace Laboratory analyzed all PFAS samples via a method compliant with Table B-15 of the United States Department of Defense (DoD) Quality Systems Manual (QSM) version 5.3. The 28 PFAS compounds in the USEPA Method 537.1 list were analytes which included PFAS compounds from CSWRCB order for determination of PFAS at chrome plating facilities. Of the 28 PFAS compounds, analytical results detected the following 24 PFAS analytes:

1. 4:2 fluorotelomer sulfonate
2. 6:2 fluorotelomer sulfonate
3. 8:2 fluorotelomer sulfonate
4. PFOA
5. PFOS
6. PFBS

7. perfluorobutanoic acid (PFBA)
8. perfluorodecanoic acid (PFDA)
9. perfluorododecanoic acid (PFDoA)
10. perfluorodecanesulfonic acid (PFDS)
11. perfluoroheptanesulfonic acid (PFHpS)
12. perfluoroheptanoic acid (PFHpA)
13. perfluorohexanoic acid (PFHxA)
14. PFHxS
15. PFNA
16. Perfluorononanesulfonic acid (PFNS)
17. Perfluorooctane sulfonamide (FOSA)
18. Perfluoropentanoic acid (PFPEA)
19. Perfluoropentanesulfonic acid (PFPES)
20. perfluorotetradecanoic acid (PFTeA)
21. perfluorotridecanoic acid (PFTrDA or PFTfIA)
22. perfluoroundecanoic acid (PFUnA)
23. n-ethyl perfluorooctanesulfonamidoacetic acid (NEtFOSAA)
24. HFPO-DA, also known as GenX

PFAS concentrations in soil and groundwater samples were compared to applicable human health-based screening levels to determine where further investigation would be necessary. The groundwater screening levels used in this SI include the USEPA RSL of 4 nanograms per liter (ng/L) for PFOS, 6 ng/L for PFOA, 5.9 ng/L for PFNA, 39 ng/L for PFHxS, 600 ng/L for PFBS, and 6 ng/L for HFPO-DA. Data also were screened against the CSWRCB and San Francisco Bay Regional Water Quality Control Board (Regional Water Board) Interim Environmental Screening Levels (ESL) for PFOA (5.1 ng/L) and PFOS (6.5 ng/L).

Soil screening levels used in this SI include the USEPA RSL of 13 micrograms per kilogram (µg/kg) for PFOS, 19 µg/kg for PFOA and PFNA, 130 µg/kg for PFHxS, 1,900 µg/kg for PFBS, and 23 µg/kg for HFPO-DA. Soil screening levels also include the CSWRCB interim ESL of 3.8

µg/kg (human health) and 84 µg/kg (ecological) for PFOA, and 12 µg/kg (human health) and 13 µg/kg (ecological) for PFOS (CSWRCB 2020a, Regional Water Board 2020).

No USEPA PFAS screening levels have been established for surface water or influent/effluent. As a result, surface water data acquired during the SI appear in this report but are not compared to any screening levels. Influent/effluent results were compared to USEPA and State groundwater screening levels for evaluation purposes only. At ARC, discharges of surface water from Building 191 pump station (AOPC 11) flow east and are pumped over a dike and directly discharged to the Guadalupe Slough. Treated water from NASA GWETS (AOPC 13) and MEW GWETS (AOPC 14) either discharges to Stevens Creek or is treated via reverse osmosis at the Building N271 IWPP (AOPC 20) and then used for the ARC Jet Complex before discharge into the Palo Alto Sanitary Sewer. Treated water from the WATS (AOPC 15) is discharged into the storm drains where it flows through the EDM (AOPC 12) into the Stormwater Retention Pond (SWRP).

Conclusions and recommendations for each AOPC are below, with detected concentrations of PFAS compared to State of California ESLs and USEPA RSLs. Figures included in this report present PFAS data, which are compared to USEPA RSLs, as applicable. The tables included in this report include full PFAS datasets, which are compared to USEPA and State ESLs, as applicable.

<u>AOPC 1 – Former Firefighting Training Area (IR 10, 12, 20)</u>

- **Soil**: PFOS was detected at concentrations exceeding the soil RSL of 13 µg/kg in five samples and above the human health and ecologic ESLs of 12 and 13 µg/kg, respectively, in five samples. PFOA was detected at concentrations exceeding the human health ESL of 3.8 µg/kg in five samples. PFOA concentrations exceeded the ecologic ESL of 84 µg/kg in one sample. PFOA exceeded the soil RSL of 19 µg/kg in three samples. There were no exceedances of the RSL by concentrations of PFNA, PFHxS, HFPO-DA, or PFBS.

- **Groundwater**: PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and exceeding the groundwater ESL of 5.1 ng/L in six samples. PFOS was

detected at concentrations exceeding the groundwater RSL of 4 ng/L and exceeding the groundwater ESL of 6.5 ng/L in seven samples. PFHxS was also detected at concentrations exceeding the groundwater RSL of 39 ng/L in six samples. PFNA was detected at a concentration exceeding the groundwater RSL of 5.9 ng/L in one sample. There were no PFBS screening level exceedances, and HFPO-DA was non-detect in all samples.

Prior to this SI, some groundwater samples were collected at AOPC 1. During the September 2019 sampling event, groundwater samples were collected at two locations at AOPC 1. PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and exceeding the groundwater ESL of 5.1 ng/L in both samples. PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L and exceeding the groundwater ESL of 6.5 ng/L in both samples. PFHxS also was detected at concentrations exceeding the groundwater RSL of 39 ng/L in both samples. PFNA was detected at a concentration exceeding the groundwater RSL of 5.9 ng/L in one sample. PFBS also was detected at a concentration exceeding the groundwater RSL of 600 ng/L in one sample.

- **Recommendation**: Further investigation of the horizontal and vertical extents of PFAS in groundwater and soil is recommended.

<u>AOPC 2 – Crash Site (Sunnyvale Golf Course)</u>

- **Soil**: PFOS was detected at concentrations exceeding the RSL, human health and ecologic ESLs in four samples. **PFOA** was detected at concentrations exceeding the human health ESL of 3.8 µg/kg in four samples. PFBS, PFHxS, and PFNA were not detected above screening criteria. HFPO-DA was non-detect in all samples.

- **Groundwater**: PFOS was detected at concentrations exceeding the groundwater ESL of 6.5 ng/L and the groundwater RSL of 4 ng/L in three samples. PFOA, PFBS, PFNA, and PFHxS did not exceed any screening values. HFPO-DA was non-detect in all samples.

- **Recommendation**: Further investigation of the horizontal and vertical extents of PFAS in groundwater and soil is recommended.

AOPC 3 – Hangars 2 & 3 (IR 7)

- **Groundwater**: PFOA was detected at a concentration exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in six samples. PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L and the groundwater ESL in seven samples. PFNA was detected at a concentration exceeding the groundwater RSL of 5.9 ng/L in one sample. HFPO-DA was detected at a concentration exceeding the groundwater RSL of 6 ng/L in one sample. PFHxS was detected at concentration exceeding the groundwater RSL of 39 ng/L in five samples. PFBS was non-detect in all samples.

- **Recommendation**: Further investigation of horizontal and vertical extents of PFAS in groundwater is recommended.

AOPC 4 – Former Engine Test Stand Area (IR 11)

- **Groundwater**: PFOA was detected at a concentration exceeding the groundwater RSL of 6 ng/L and groundwater ESL of 5.1 ng/L in both samples. There were no screening level exceedances for PFBS, PFHxS, or PFOS. PFNA and HFPO-DA were non-detect in all samples.

- **Recommendation**: Further investigation of horizontal and vertical extents of PFAS in groundwater is recommended.

AOPC 5 – Hangar N211 (within AOI 3, formerly AOI 12)

- **Groundwater**: PFBS was detected in one sample at a concentration exceeding the groundwater RSL of 600 ng/L. PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in seven samples. PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L and the groundwater ESL of 6.5 ng/L in seven samples. PFHxS was detected at concentrations

exceeding the groundwater RSL of 39 ng/L in five samples. PFNA was detected at concentrations exceeding the groundwater RSL of 5.9 ng/L in five samples. HFPO-DA was non-detect in all samples.

- **Recommendation**: Further investigation of horizontal and vertical extents of PFAS in groundwater is recommended.

AOPC 6 – Hangar N248 (AOI 3 East)

- **Soil**: PFOS was detected at concentrations exceeding the RSL of 13 µg/kg and the human health and ecologic ESLs of 12 and 13 µg/kg respectively in two samples. PFOA was detected at a concentration exceeding the human health ESL of 3.8 µg/kg in one sample. There were no detections exceeding PFBS, PFNA, or PFHxS screening levels. HFPO-DA was non-detect in all samples.

- **Groundwater**: PFBS was detected at concentrations exceeding the groundwater RSL of 600 ng/L in one sample. PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in all three samples. PFOS was also detected at concentrations exceeding the groundwater RSL of 4 ng/L and the groundwater ESL of 6.5 ng/L in all three samples. PFHxS exceeded the groundwater RSL of 39 ng/L in three samples, and PFNA exceeded the groundwater RSL of 5.9 ng/L in one sample. HFPO-DA was non-detect in all samples.

- **Recommendation**: Further investigation of the horizontal and vertical extents of PFAS in groundwater and soil is recommended.

AOPC 7 – Fire Department (Building 580)

- **Soil**: PFOS was detected at concentrations exceeding the soil RSL of 13 µg/kg and the human health and ecologic ESLs of 12 and 13 µg/kg, respectively, in all four samples. PFOA was detected at a concentration exceeding the human health ESL of 3.8 µg/kg in one sample. There were no PFHxS, PFNA, or PFBS screening level exceedances. HFPO-DA was non-detect in all samples.

- **Groundwater**: PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in four samples. PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L and the groundwater ESL of 6.5 ng/L in five samples. PFHxS exceeded the groundwater RSL of 39 ng/L in four samples, and PFNA exceeded the groundwater RSL of 5.9 ng/L in one sample. PFBS did not exceed any screening levels. HFPO-DA was non-detect in all samples.

- **Recommendations**: Further investigation of horizontal and vertical extents of PFAS in groundwater and soil is recommended. For the purposes of further investigation, AOPC 7 will be subsumed into AOPC 1 as the PFAS are the same or similar, and AOPC 7 is within AOPC 1.

AOPC 8 – Site 1 Runway Landfill (IR 1)

- **Groundwater**: PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in two samples. PFOS, PFBS, and PFHxS did not exceed any screening levels. PFNA and HFPO-DA were non-detect in all samples.

- **Recommendation**: Further investigation of horizontal and vertical extents of PFAS in groundwater is recommended.

AOPC 9 – Site 2 Former Golf Course Landfill (IR 2)

- **Groundwater**: PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in three samples. PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L and the groundwater ESL of 6.5 ng/L in three samples. PFHxS was detected at concentrations exceeding the groundwater RSL of 39 ng/L in three samples. PFBS and PFNA did not exceed any screening levels. HFPO-DA was non-detect in all samples.

- **Recommendation**: Further investigation of horizontal and vertical extents of PFAS in groundwater is recommended.

AOPC 10 – Site 22 Landfill (IR 22)

- **Groundwater**: PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in five samples. PFOS was detected at a concentration exceeding the groundwater RSL of 4 ng/L and the groundwater ESL of 6.5 ng/L in five samples. PFHxS was detected at concentration exceeding the groundwater RSL of 39 ng/L in one sample. PFBS and PFNA did not exceed any screening levels. HFPO-DA was non-detect in all samples.

- **Recommendation**: Further investigation of the horizontal and vertical extents of PFAS in groundwater is recommended.

AOPC 11 – Building 191 Pump Station

- **Surface water**: PFNA was detected at concentration of 13 ng/L, PFHxS was detected at a concentration of 930 ng/L, PFBS was detected at concentration of 130 ng/L, PFOA was detected at a concentration of 340 ng/L, and PFOS was detected at a concentration of 1,400 ng/L. HFPO-DA was non-detect in all samples. No screening levels have been established for surface water.

- **Recommendations**: Further investigation of the presence of PFAS in surface water is recommended, including the possibility of a pathway between AOPC 11 (Building 191 Pump Station), AOPC 16 (North Patrol Road Ditch and Northern Channel), and AOPC 17 (Marriage Road Ditch).

AOPC 12 – Stormwater Settling Basin/EDM (within IR 25)

- **Surface water**: PFBS was detected at a concentration of 4 ng/L, PFOA was detected at an estimated concentration of 1.1 ng/L, PFHxS was detected at 6 ng/L, and PFOS was detected at a concentration of 5.5 ng/L. HFPO-DA and PFNA were non-detect in all samples. No screening levels have been established for surface water.

- **Recommendations**: Further investigation of the sources and extent of PFAS in surface water in AOPC 12 is recommended.

AOPC 13 – NASA Groundwater Extraction Treatment System

- **Influent/Effluent**: Influent/effluent results were compared to USEPA and State groundwater screening levels for evaluation purposes only. Concentrations in the influent sample exceeded the groundwater RSLs for PFOS, PFHxS, and PFOA, as well as the groundwater ESLs for PFOS and PFOA. Concentrations in the effluent sample exceeded the groundwater RSL of 4 ng/L; however, concentrations in the duplicate sample were under the RSL.

- **Surface water**: PFBS was detected at estimated concentration of 1.3 ng/L, PFOA was detected at estimated concentration of 1.1 ng/L, PFHxS was detected at 5.4 ng/L, and PFOS was detected at 7.4 ng/L. HFPO-DA and PFNA were not detected in the sample. No screening levels for surface water have been established.

- **Recommendation**: Further investigation of the extents of PFAS in surface water at AOPC 13 is recommended, along with routine quarterly monitoring of the influent and effluent and taking additional steps as needed based on results.

AOPC 14 – MEW Groundwater Extraction Treatment System

- **Influent/Effluent**: Influent/effluent results were compared to USEPA and State groundwater screening levels for evaluation purposes only. Concentrations in both samples exceeded the groundwater RSLs for PFOS, PFOA, and PFHxS, as well as the groundwater ESLs for PFOS and PFOA. In all cases except for PFBA and PFPeA, the influent concentration was higher than the effluent concentration, and for these two compounds the difference was negligible.

- **Surface water**: PFBS was detected at an estimated concentration of 1.3 ng/L, PFOA was detected at an estimated concentration of 1.1 ng/L, PFHxS was detected at 5.4 ng/L, and PFOS was detected at 7.4 ng/L. HFPO-DA and PFNA were non-detect in all samples. No screening levels have been established for surface water.

- **Recommendation**: Further investigation of discharges from the MEW GWETS into Stevens Creek is recommended (no PFAS has been detected in effluent from NASA's

GWETS). Routine quarterly monitoring of the influent and effluent is also recommended, and additional steps should be taken based on results. The MEW GWETS should be updated to reduce concentrations of PFAS to below appropriate discharge concentrations in Stevens Creek.

AOPC 15 – West-Side Aquifers Treatment System (IR 28)

- **Influent/Effluent**: Influent and effluent results were compared to USEPA and State groundwater screening levels for evaluation purposes only. Concentrations in the influent sample exceeded groundwater RSLs for PFOS, PFOA, and PFHxS, as well as groundwater ESLs for PFOS and PFOA. Twelve of the 28 PFAS compounds were detected in the influent sample from AOPC 15. The only PFAS compound detected in the effluent sample was PFBA at an estimated concentration of 3.9 ng/L.

- **Recommendation**: Routine quarterly monitoring of the influent and effluent is recommended, and additional steps should be taken as needed based on results.

AOPC 16 – North Patrol Road Ditch (IR 21) and Northern Channel (IR 27)

- **Groundwater**: PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in four samples. PFOS was also detected at concentrations exceeding the groundwater RSL of 4 ng/L and the groundwater ESL of 6.5 ng/L in three samples. PFHxS was detected at concentrations exceeding the groundwater RSL of 39 ng/L in two samples. PFBS and PFNA were not detected at concentrations exceeding any screening levels, and HFPO-DA was non-detect in all samples.

- **Recommendation**: Further investigation of the horizontal and vertical extents of PFAS in groundwater is recommended. The pathway of PFAS in surface water between AOPC 11 (Building 191 Pump Station), AOPC 16 (North Patrol Road Ditch and Northern Channel), and AOPC 17 (Marriage Road Ditch) should also be investigated.

AOPC 17 – Marriage Road Ditch (IR 3)

- **Groundwater**: PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in four samples. PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L and the groundwater ESL of 6.5 ng/L in four samples. PFHxS was detected at concentrations exceeding the groundwater RSL in four samples. PFNA, PFBS, and HFPO-DA were not detected at concentrations exceeding any screening levels.

- **Recommendation**: Further investigation of the horizontal and vertical extents of PFAS in groundwater is recommended. The pathway of PFAS in surface water between AOPC 11 (Building 191 Pump Station), AOPC 16 (North Patrol Road Ditch and Northern Channel), and AOPC 17 (Marriage Road Ditch) should also be investigated.

AOPC 18 – Lindbergh Avenue Storm Drain Ditch (AOI 6)

- **Groundwater**: PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in two samples. PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L and the groundwater ESL of 6.5 ng/L in all three samples. PFHxS was detected at concentrations exceeding the groundwater RSL in two samples. PFBS and PFNA did not exceed any screening levels. HFPO-DA was non-detect in all samples.

- **Recommendation**: Further investigation of the horizontal and vertical extents of PFAS in groundwater is recommended.

AOPC 19 – Stormwater Retention Ponds (within IR 25)

- **Surface water**: One surface water sample was collected at AOPC 19. However, this sample was flagged during data validation and not included in the data evaluation.

- **Recommendations**: Re-sampling of surface water is recommended for AOPC 19, along with sediment sampling.

AOPC 20 – Building N271 IWPP

- **Effluent**: Effluent results were compared to USEPA and State groundwater screening levels for evaluation purposes only. Concentrations in the sample exceeded the groundwater RSLs for PFOS, PFOA, and PFHxS, and the groundwater ESLs for PFOS and PFOA. There were no PFBS screening level exceedances, and PFNA and HFPO-DA were non-detect in all samples.

- **Recommendation**: Routine quarterly monitoring of the effluent is recommended, and additional steps should be taken as needed based on results.

AOPC 21 – Former Industrial Wastewater Surface Impoundment (IR 4)

- **Groundwater**: PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in seven samples. PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L and the groundwater ESL of 6.5 ng/L in five samples. One sample also exceeded the groundwater ESL for PFOS (6.4 ng/L). PFHxS was detected at concentrations exceeding the groundwater RSL of 39 ng/L in five samples. PFNA, PFBS, and HFPO-DA were not detected at concentrations exceeding any screening level.

- **Recommendation**: Further investigation of the horizontal and vertical extents of PFAS in groundwater is recommended.

AOPC 22 – Building N249 Outdoor Aerodynamic Research Facility

- **Groundwater**: PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L and the groundwater ESL of 6.5 ng/L in three samples. PFHxS was detected at concentrations exceeding the groundwater RSL of 39 ng/L in one sample. PFOA, PFNA, PFBS, and HFPO-DA were not detected at concentrations exceeding any screening levels.

- **Recommendation**: Further investigation of the horizontal and vertical extents of PFAS in groundwater is recommended.

AOPC 23 – Hangar 4 (CANG) Building 662

- **Groundwater/Soil/Sediment**: No samples were collected at AOPC 23 during the SI as previous sampling efforts already identified the presence of PFAS at this site. However, during the SI, one groundwater sample was collected from a new well, PFAS-C, which is near a well previously sampled for AOPC 23. Results from PFAS-C are discussed in Section 5.23 and results from previous sampling in 2018-2019 at AOPC 23 are discussed in Section 3.6.23

- **Recommendation**: A remedial investigation is recommended for AOPC 23.

AOPC 24 – Middlefield-Ellis-Whisman (MEW) Plume

- **Groundwater**: PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in one sample. PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L in three samples. PFOS also exceeded the groundwater ESL of 6.5 ng/L in two samples. PFHxS was detected at a concentration exceeding the groundwater RSL of 39 ng/L in one sample. PFBS was not detected at concentrations exceeding any screening levels. PFNA and HFPO-DA were non-detect in all samples.

- **Recommendation**: Further investigation of the horizontal and vertical extents of PFAS in groundwater is recommended.

AOPC 25 – Orion Park Plume

- **Groundwater**: PFOS was detected at concentrations exceeding the groundwater ESL of 6.5 ng/L in one sample and exceeding the groundwater RSL of 4 ng/L in two samples. PFOA, PFNA, PFHxS, HFPO-DA, and PFBS were not detected at any concentrations exceeding any screening levels.

- **Recommendation**: Further investigation of the horizontal and vertical extents of PFAS in groundwater is recommended.

AOPC 26 – Eastern Boundary (IR-5)

- **Groundwater**: PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L. PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L and the groundwater ESL of 6.5 ng/L. PFNA and PFHxS exceeded the groundwater RSLs of 5.9 ng/L and 39 ng/L, respectively. The detected concentration of PFBS did not exceed any screening level, and HFPO-DA was non-detect in all samples.

- **Recommendation**: Further investigation of the horizontal and vertical extents of PFAS in groundwater is recommended.

All 26 AOPCs included in this SI are recommended for further PFAS evaluation based on data exceeding screening levels or the need to collect additional data to evaluate potential PFAS impacts (e.g., AOPC 19 - Stormwater Retention Pond [within IR 25]). The highest detections for PFAS compounds with USEPA RSLs that have been identified in groundwater and soil, respectively, at ARC to date include: PFOS (40,000 ng/L, 1,900 µg/kg), PFOA (5,540 ng/L, 120 µg/kg), PFBS (1,500 ng/L, 1.8 µg/kg), HPFO-DA (estimated 6.10 ng/L, not detected in soil), PFHxS (10,400 ng/L, 92.0 µg/kg), and PFNA (111 ng/L, 2.60 µg/kg).

Currently the SI data indicate that PFAS are present in the surface water migrating off-site. Further investigation is necessary to determine if there are unacceptable impacts from the presence of PFAS in off-site surface water based on determination of potential receptors and development of risk-based criteria using site specific parameters.

SECTION 1
INTRODUCTION

This Site Inspection (SI) Report documents activities and results of the per- and polyfluoroalkyl substances (PFAS) SI at the National Aeronautics and Space Administration (NASA) Ames Research Center (ARC) in Mountain View, California (Figure 1-1). Tetra Tech, Inc. (Tetra Tech) prepared this document for NASA. PFAS SI activities at ARC were conducted in accordance with the PFAS SI Work Plan (SIWP), but with some modifications, which are discussed in Section 4.7. The SIWP was included as an appendix to the ARC Preliminary Assessment (PA) Report (PAR) (Tetra Tech 2021a). The SIWP is also in Appendix A to this document for reference.

1.1 OBJECTIVES

A total of 26 areas of potential concern (AOPCs) were identified during the ARC PFAS PA conducted in 2019-2020 (Figure 1-2). One AOPC (AOPC 23) was not investigated during the SI as the presence of PFAS already had been identified during previous investigations; therefore, this AOPC moved directly into the RI phase (further discussed in Sections 3.6.23 and 5.23).

Identification of AOPCs during the ARC PFAS PA was based on known or suspected use and/or releases of PFAS. Potential PFAS sources investigated during the PA included aqueous film forming foam (AFFF) release areas, electroplating facilities, wastewater treatment facilities, waste disposal areas, and other industrial sources, such as PFAS-containing resins, elastomers, or telomer products associated with the former Space Shuttle Program, aviation hydraulic fluids, and specialty paints and coatings. Primary objectives of the SI were to inspect each identified potential source area for presence of PFAS as outlined in the SIWP, compare PFAS concentrations to screening levels (as applicable), and determine whether further investigation would be warranted.

The potential source areas identified during the PA included AFFF release areas, electroplating facilities, landfills and other solid waste disposal areas, and water treatment systems. The SIWP proposed collecting 72 groundwater samples, four surface water samples, 28 soil samples, and eight influent/effluent samples from water treatment systems. The AOPCs included:

- AOPC 1 – Former Firefighting Training Area (Installation Restoration [IR] 10, 12, 20)
- AOPC 2 – Crash Site (Sunnyvale Golf Course)
- AOPC 3 – Hangars 2 & 3 (IR 7)
- AOPC 4 – Former Engine Test Stand Area (IR 11)
- AOPC 5 – Hangar N211 (within Area of Investigation [AOI] 3, formerly AOI 12)
- AOPC 6 – Hangar N248 (AOI 3 East)
- AOPC 7 – Fire Department (Building 580)
- AOPC 8 – Site 1 Runway Landfill (IR 1)
- AOPC 9 – Site 2 Former Golf Course Landfill (IR 2)
- AOPC 10 – Site 22 Landfill (IR 22)
- AOPC 11 – Building 191 Pump Station
- AOPC 12 – Stormwater Settling Basin/Eastern Diked Marsh (EDM) (within IR 25)
- AOPC 13 – NASA Groundwater Extraction Treatment System
- AOPC 14 – Middlefield-Ellis-Whisman (MEW) Groundwater Extraction Treatment System
- AOPC 15 – West-Side Aquifers Treatment System (IR 28)
- AOPC 16 – North Patrol Road Ditch (IR 21) and Northern Channel (IR 27)
- AOPC 17 – Marriage Road Ditch (IR 3)
- AOPC 18 – Lindbergh Avenue Storm Drain Ditch (AOI 6)
- AOPC 19 – Stormwater Retention Ponds (within IR 25)
- AOPC 20 – Building N271 Industrial Wastewater Pretreatment Plant
- AOPC 21 – Former Industrial Wastewater Surface Impoundment (IR 4)
- AOPC 22 – Building N249 Outdoor Aerodynamic Research Facility
- AOPC 23 – Hangar 4 (California Air National Guard [CANG]) Building 662
- AOPC 24 – Middlefield-Ellis-Whisman (MEW) Plume
- AOPC 25 – Orion Park Plume
- AOPC 26 – Lockheed Martin (Will be referred to as the Eastern Boundary – IR 5 in this SI and forward)

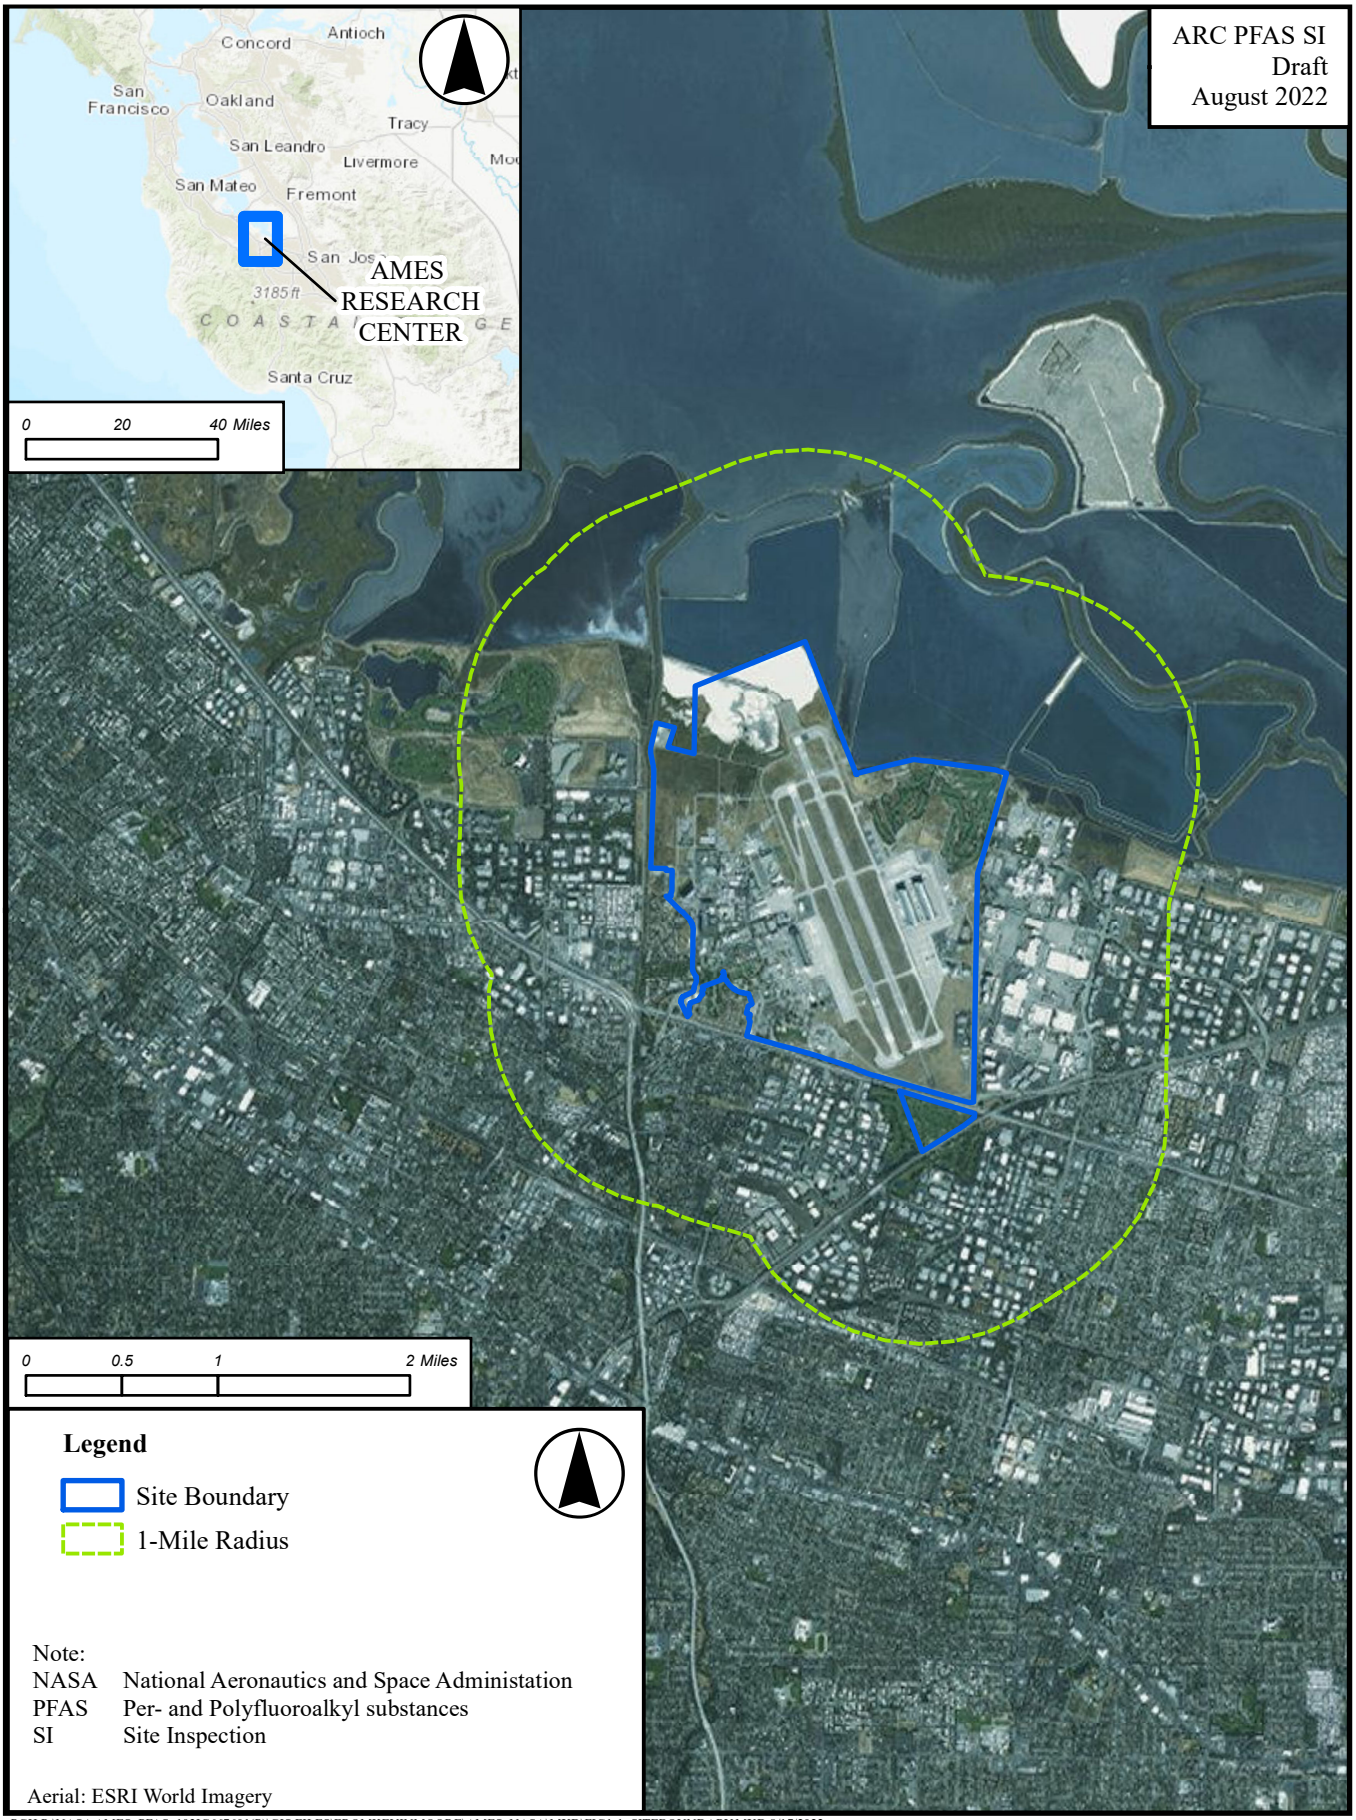
1.2 REPORT ORGANIZATION

This report is organized as follows:

Section 1: Introduction – Introduction, objectives, and report organization of the SI.

Section 2: PFAS Overview – Background and history of PFAS, health effects and advisory levels of PFAS, and screening levels applicable to this SI.

Section 3: Facility Background and History – Background and history of the Center and each AOPC, along with the conceptual site model (CSM).



Section 4: Field Activities – Description of field inspection activities.

Section 5: Analytical Results and Findings – Documentation of analytical results and findings.

Section 6: Conclusions and Recommendations – Summary of conclusions regarding each AOPC and recommendations for path forward.

SECTION 2
PFAS OVERVIEW

This section discusses chemical and physical properties of PFAS, identifies major sources of PFAS released to the environment as a result of manufacturing and wide-spread use of these chemicals in many commercial products, and summarizes health effects criteria and regulatory status available for specific PFAS.

2.1 PFAS BACKGROUND

PFAS consist of a wide variety of substances of more than 3,000 (some recent estimates are 5,000 to 10,000) manmade chemicals (Interstate Technology Regulatory Council [ITRC] 2017). The PFAS class at the focus of this inspection encompasses the non-polymer perfluoroalkyl and polyfluoroalkyl substances that have been identified as emerging contaminants by the United States Environmental Protection Agency (USEPA). Structurally, PFAS have a polar and hydrophilic (water-affinity) functional head and hydrophobic (water-repelling) and oleophobic (oil-resistant) tail, which give them surfactant properties. As such, many of the non-polymer PFAS were manufactured and used as surfactants in a variety of commercial products.

The strong carbon-fluorine bond and surfactant properties rendered PFAS ideal for use in a wide variety of commercial and industrial products, beginning in the 1940s with initial production for use in non-stick coatings (ITRC 2017). Since the 1940s, PFAS were manufactured for use in stain and water-resistant products, firefighting foam, protective coatings, food packaging, clothing, and personal care products (e.g., some insect repellents, sunscreens, and shampoo formulations). PFAS were detected in the blood of the general population in the 1990s after biomonitoring for this class of chemicals was added to the Centers for Disease Control and Prevention's (CDC) National Health and Nutrition Examination Survey (NHANES) protocol, and this was attributed to pervasive use of PFAS in commercial and industrial products. The principal manufacturer of PFAS, 3M, began to phase out production of longer chain PFAS in the early 2000s; however, PFAS are still manufactured globally. Products were reformulated to contain shorter chained PFAS, including polyfluoroethers and other replacement compounds that are still used today by U.S. manufacturers.

Currently, published values associated with chemical and physical properties of PFAS vary. However, the carbon-fluorine bonds in PFAS are exceptionally strong, resulting in resistance to degradation, low chemical reactivity, compound stability, and persistence in the environment (Agency for Toxic Substances and Disease Registry [ATSDR] 2021). Two of the most studied PFAS detected in the environment are the 8-carbon chain perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS).

Major sources of PFAS with potential to impact the environment include AFFF release sites, PFAS or PFAS-products manufacturing facilities, landfills, and biosolids and effluent from WWTPs (ITRC 2017). The aerospace industry also utilizes PFAS-containing products in coatings, paints, greases, resins, and elastomers because of their high-performance properties (Shuttle Environmental Assurance [SEA] 2010, NASA 2013). High-volume use and disposal of these materials in significant amounts may be a source of PFAS to the environment.

2.2 PFAS HEALTH EFFECTS AND ADVISORY LEVELS

Limited information is available on only a few PFAS regarding potential health effects caused by exposure to PFAS. USEPA's hierarchy for selecting toxicity values provides three tiers: USEPA's Integrated Risk Information System (IRIS) as the first tier, Provision Peer-Reviewed Toxicity Values (PPRTVs) as the second tier, and "other toxicity values" as the third tier (USEPA 2003b). Currently, no final Tier 1 toxicity values have been established for any PFAS. Tier 1 toxicity values are the preferred source for toxicity factors for completion of Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) human health risk assessments. However, other sources of toxicity information have been used to develop lifetime drinking water health advisory (HA) levels for four PFAS (PFOA, PFOS, perfluorobutanesulfonic acid [PFBS] and hexafluoropropylene oxide dimer acid [HFPO-DA, also known as GenX]) (USEPA 2022a), and to calculate USEPA Regional Screening Levels (RSLs) for six PFAS (PFOA, PFOS, PFBS, HFPO-DA, perfluorohexanesulfonic acid [PFHxS], and perfluorononanoic acid [PFNA]) (USEPA 2022b).

2.2.1 USEPA Health Based Values for PFAS

In 2006, USEPA started a stewardship program in an attempt to phase out the most widely used PFAS (specifically PFOA and PFOS); however, many other PFAS remain in wide use. In May 2016,

the USEPA Office of Water issued drinking water lifetime HAs for PFOA and PFOS based on reference doses (RfDs) developed by the Office of Water (USEPA 2016a, 2016b). HAs are not enforceable regulatory levels. A lifetime HA is set based on an assumption of a lifetime of exposure to PFOA and PFOS from drinking water. The 2016 Office of Water lifetime HAs are 70 nanograms per liter (ng/L) (or parts per trillion [ppt]) for PFOA and 70 ng/L for PFOS. These HAs for PFOA and PFOS had been used as drinking water targets by many states and as action limits for drinking water investigations by the DoD until they were superseded by updated drinking water lifetime HAs in June 2022.

On June 15, 2022, USEPA Office of Water (USEPA 2022a) issued interim updated drinking water lifetime HAs for PFOA and PFOS, and provided new lifetime drinking water HAs for PFBS and HFPO-DA. USEPA issued interim HAs for PFOA and PFOS because the associated health effects assessments are in draft form, but there is a pressing need to provide information to public health officials prior to finalization of the health effects assessment. The interim updated HAs for PFOA and PFOS are based on the draft November 2021 toxicity assessments currently under review by the Science Advisory Board. Once the review is completed, the interim HAs may change based on the best available science. The new HAs for PFBS and HFPO-DA (GenX) are based on USEPA's 2021 final toxicity assessments for these PFAS (USEPA 2021a and 2021b, respectively). The June 2022 HAs are summarized as follows:

Chemical	Lifetime Health Advisory (ppt)
PFOA	0.004 (Interim)
PFOS	0.02 (Interim)
PFBS	2000 (Final)
HFPO-DA	10 (Final)

In May 2022, USEPA's RSL Tables were published with RSLs for PFOA, PFOS, PFBS, HFPO-DA (GenX), PFHxS, and PFNA. The purpose of RSLs is to aid in decision-making concerning CERCLA investigations, and to help make the determination if chemical levels in site media warrant further investigation based on these risk-based levels or no further investigation is needed. As such, the RSLs are appropriate to use as screening criteria for this PFAS SI. A recent United States Department of Defense (DoD) memorandum (DoD 2022) also directs use of soil and tapwater RSLs

for these six PFAS. New RSLs were developed for PFOA, PFOS, PFHxS, PFNA, and HFPO-DA (GenX), as documented in the updated May 2022 EPA RSL Tables (USEPA 2022b). The screening values for PFBS remained unchanged since the May 2021 update to the RSL Tables. The screening values for PFBS and HFPO-DA (also known as GenX) are based on USEPA's 2021 final toxicity assessment RfDs for those compounds (USEPA 2021a and 2021b, respectively). Screening values for PFOA, PFOS, PFHxS, and PFNA area based on ATSDR's 2021 RfDs (ATSDR 2021). The following section provides brief discussions on the studies and critical effects on which the toxicity values used in the RSL calculations are based.

PFBS: The USEPA Office of Research and Development released Human Health Toxicity Values for PFBS (CASRN 375-73-5) and Related Compound Potassium Perfluorobutane Sulfonate (CASRN 29420-49-3) in April 2021 (USEPA 2021a). This toxicity assessment provided a chronic oral RfD of 0.0003 milligrams per kilogram per day (mg/kg-day) and a subchronic RfD of 0.0009 mg/kg-day for PFBS, and considered Tier 2 noncarcinogenic toxicity values for use in CERCLA investigations. The PFBS oral RfDs are based on thyroid effects (decreased thyroid hormone levels). Due to lack of information in the current literature on PFBS inhalation toxicity or carcinogenicity, toxicity values for inhalation exposure and cancer endpoints could not be estimated for PFBS (USEPA 2021a).

HFPO-DA (GenX): USEPA's Office of Water released "Human Health Toxicity Value for Hexafluoropropylene Oxide (HFPO) Dimer Acid and its Ammonium Salt (CASRN 13252-13-6 and CASRN 62037-80-3), Also Known as "GenX Chemicals,"" in October 2021 (USEPA 2021b). This toxicity assessment provides chronic and subchronic oral RfDs for HFPO-DA (GenX) that are based on liver effects in female mice. Due to a lack of information in the current literature on HFPO-DA (GenX) inhalation toxicity and carcinogenicity, toxicity values for inhalation exposure and cancer endpoints could not be estimated. As such, the USEPA Office of Water found the carcinogenic studies to be inadequate to justify a quantitative assessment for a cancer slope factor, but determined that HFPO-DA (GenX) should still be classified as "suggestive evidence of carcinogenic potential" (USEPA 2021b).

PFOA: The ATSDR released "Toxicological Profile for Perfluoroalkyl Substances" in May 2021 (ATSDR 2021). The ATSDR profile characterizes the toxicologic and adverse health effects

information for various PFAS compounds, including PFOA. Based on these potential health effects, ATSDR developed Minimal Risk Levels (MRLs), an estimate of the daily human exposure to a substance that is likely to be without appreciable risk of adverse noncancer health effects over a specified route and duration of exposure. ATSDR developed MRLs for PFOA, as well as PFOS, PFHxS, and PFNA.

The MRL developed for PFOA is based on a development toxicity study in mice. The critical effect included skeletal alterations at 13 and 17 months of age in the offspring of mice fed a diet containing PFOA on gestation days 1 through 21 (ATSDR 2021).

USEPA's Office of Water also maintains that PFOA should be classified as "suggestive evidence of carcinogenic potential" and estimated an oral cancer slope factor (CSF) based on tumor development in rat testes (USEPA 2016a). Due to a lack of information in the current literature on PFOA inhalation toxicity, toxicity values for inhalation exposure were not estimated for PFOA (USEPA 2016a).

PFOS: ATSDR developed an MRL for PFOS based on a developmental toxicity study in rats. The critical effects included delayed eye opening and decreased pup body weight during lactation in the offspring of rats administered PFOS orally (ATSDR 2021).

PFHxS: ATSDR developed an MRL for PFHxS based on a thyroid toxicity study in rats. The critical effect was thyroid cell proliferation in adult male rats administered PFHxS orally for a minimum of 42 days (ATSDR 2021).

PFNA: ATSDR developed an MRL for PFNA based on a developmental toxicity study in mice. The critical effects were decreased body weight gain and developmental delays in the offspring of mice administered PFNA orally on gestation days 1 through 17 (ATSDR 2021).

2.2.2 California Health-Based Values for PFAS

In California, health-based advisory values for drinking water and screening levels for soil and groundwater have been developed for PFOA and PFOS. In July 2018, the California State Water Resources Control Board (CSWRCB) Division of Drinking Water (DDW) established drinking

water Notification Levels (NLs) of 14 and 13 ppt for PFOS and PFOA, respectively. In August 2019, by recommendation of the State of California Office of Environmental Health Hazard Assessment (OEHHA), DDW lowered the NLs to 6.5 ppt for PFOS and 5.1 ppt for PFOA (CSWRCB 2020a). In setting the recommended NLs, OEHHA developed reference levels for cancer effects based on OEHHA's risk assessment methodology, physiological information obtained from USEPA, and evaluation of recent human and animal toxicity data (California Environmental Protection Agency 2019). On February 6, 2020, DDW issued updated drinking water response levels (RLs) of 10 ppt for PFOA and 40 ppt for PFOS based on a running four-quarter average. On March 5, 2021, DDW issued a drinking water NL and RL of 0.5 parts per billion (ppb) and 5 ppb, respectively, for PFBS. These NLs are non-regulatory, health-based advisory levels for contaminants in drinking water for which no Maximum Contaminant Levels (MCLs) have been established. NLs are associated with notification requirements for drinking water system (San Francisco Bay Regional Water Quality Control Board [Regional Water Board] 2020). Variability in PFAS screening criteria/levels exists among various states because each regulatory agency may have selected different toxicological studies, identified a different toxicological effect (e.g., liver, immunological), chosen a different sensitive receptor (e.g., lactating woman, residential child), applied different uncertainty factors, or incorporated a relative source contribution (i.e., accounting for a receptor receiving PFAS from other sources).

Section 2.3 presents the screening levels, methodology, and rationale for selecting them for this SI Report.

2.3 PFAS SCREENING LEVELS AND DATA EVALUATION

The regulatory status of PFAS is very dynamic. Some states have adopted the 2016 USEPA lifetime HA level for PFOA and PFOS as drinking water targets; however, with USEPA's release of new interim lifetime drinking water HAs for PFOA and PFOS that are orders of magnitude below standard laboratory detection limits, the interim HAs currently are not attainable targets. Other states such as California have developed or are deriving their own regulatory or guidance/screening values for PFOA and PFOS as well as other PFAS.

USEPA's RSLs were used to evaluate PFAS concentrations for this SI and are listed in Table 2-1. As previously discussed, there are RSLs for six PFAS: PFOA, PFOS, PFBS, PFNA, PFHxS, and HFPO-DA (GenX). The following sections discuss the methodologies applied to derive the screening levels and the uncertainty involved.

Soil Screening Levels

USEPA's RSL Calculator provides an automated approach to develop default and site-specific RSLs for several contaminants. The RSLs generated by the RSL calculator are summarized in the USEPA's RSL table for various media, for exposure by residential and industrial receptors, and for soil levels protective of groundwater. The values listed in the RSL table are based on USEPA's standard default exposure assumptions, conservative default soil parameters (e.g., porosity, fraction of organic carbon) and approved toxicity factors.

The RSL table (USEPA 2022b) includes values for direct contact with soil and soil levels protective of groundwater. The residential RSLs for direct contact with soil corresponding to an HQ of 0.1 are as follows:

- PFOA –19 micrograms per kilogram (µg/kg)
- PFOS – 13 µg/kg
- PFNA – 19 µg/kg
- PFBS – 1,900 µg/kg
- PFHxS – 130 µg/kg
- HFPO-DA (GenX) – 23 µg/kg.

The direct contact screening values for PFBS are one to two orders of magnitude greater than those for other five PFAS. The values for PFBS are also orders of magnitude greater than the background values in the Zhu et al. study (2019). Note that a soil screening level for the carcinogenic effects of PFOA can be derived based on an individual's excess lifetime cancer risk of one-in-a-million. However, the screening level for non-carcinogenic effects is more conservative than the one derived for carcinogenic effects.

Soil levels protective of groundwater are as follows:

- PFOA – 0.091 µg/kg
- PFOS – 0.0038 µg/kg
- PFNA – 0.025 µg/kg
- PFBS – 0.019 µg/kg
- PFHxS – 0.017 µg/kg.

Soil levels derived for protection of groundwater are lower than the analytical method detection limits for measuring PFOS, PFOA, PFNA, PFBS, and PFHxS in soil. A soil level protective of groundwater cannot be calculated for HFPO-DA due to unavailability of an organic carbon partition coefficient. Soil levels protective of groundwater are also less than the background ranges for PFOA, PFOS, and PFBS in the Zhu et al. study (2019), described later in this section.

This report also includes the CSWRCB and Regional Water Board Interim Environmental Screening Levels (ESLs) for soil. For direct human health exposure, the ESLs for PFOA and PFOS are 3.8 and 12 µg/kg, respectively. For terrestrial habitat, the ESLs for PFOA and PFOS are 84 and 13 µg/kg, respectively (Regional Water Board 2020).

Groundwater Screening Levels

PFAS concentrations in groundwater were screened by use of USEPA tapwater RSLs (USEPA 2022b). Tapwater RSLs for direct contact with groundwater (assuming it is a potable source) corresponding to an HQ of 0.1 are as follows:

- PFOA – 6 ng/L
- PFOS – 4 ng/L
- PFNA – 5.9 ng/L
- PFBS – 600 ng/L
- PFHxS – 39 ng/L
- HFPO-DA (GenX) – 6 ng/L.

This report also includes the CSWRCB and Regional Water Board Interim ESLs for groundwater. For direct human health exposure, the ESLs for PFOA and PFOS are 5.1 and 6.5 ng/L, respectively.

Screening Levels for Other Environmental Media

Currently, USEPA screening levels are not available for surface water, but these can be derived with the RSL calculator for the six PFAS included in the calculator based on site-specific scenarios. This could be done as part of further PFAS evaluation. Therefore, surface water data collected during the SI are only presented in this report, but not compared to any screening levels.

There are also no USEPA screening levels for effluent from water treatment systems. For evaluation purposes only, the USEPA groundwater screening levels were used to screen the PFOS, PFOA, PFBS, PFHxS, PFNA, and HFPO-DA effluent data.

Ecological Screening Criteria

USEPA has not established any PFAS ecological screening criteria. There are also limited surface soil, sediment, and surface water ecological values available for comparisons. The CSWRCB Interim ESLs for soil include terrestrial habitat ESLs of 84 and 13 µg/kg for PFOA and PFOS, respectively (CSWRCB 2020a).

Uncertainty Analysis of the Soil to Groundwater Pathway

Soil screening levels (SSLs) protective of groundwater are presented in the RSL Tables (USEPA 2022b) for the six PFAS (PFOA, PFOS, PFBS, PFHxS, PFNA, and HFPO-DA). These SSLs are designed for use during the early stages of a site evaluation when information on soil conditions may be limited. Hence, the equation's input assumptions about release and transport of contaminants in the subsurface are conservatively estimated. The equation accounts for release of the contaminant in soil leachate, which is then transported through the subsurface soil and aquifer to a receptor well (USEPA 2022c). Detailed, site-specific data for fraction of organic carbon in soil, soil porosity, soil density, depth to groundwater, groundwater flow, distance to receptor, and determination of an appropriate dilution-attenuation factor would significantly influence and refine the soil level protective of groundwater.

Organic carbon partition coefficients serve as useful parameters for evaluating transport. However, they do not capture the impact of electrostatic interactions of PFAS with the soil, meaning that retardation estimates of PFAS transport may be underestimated. A study by Barzen-Hansen et al.

(2017) showed a general level of correlation between PFAS organic carbon partition coefficients and various soil parameters. However, soil type and the nature of organic carbon also influence PFAS sorption to soil. Lab-based sorption coefficient values (K_d) would underestimate the impact of sorption. Along with soil type, pH can strongly influence sorption. Decrease in pH can enhance sorption of specific PFAS. Conversely, increased levels of multivalent cations (e.g., calcium) can lead to increased partitioning (Higgins and Luthy 2006).

In addition to fate and transport uncertainties incorporated in the soil to groundwater pathway assessment, there are significant uncertainties in the toxicity values included in deriving the groundwater targets for this pathway assessment. Toxicity values (e.g., reference doses) needed for use in human health risk assessment are generally derived by reviewing available dose-response data in animals or humans, selecting a dose to serve as a point of departure in the data that is judged most suitable, and adjusting for associated uncertainties. Often, multiple data sets are available, and there may be a variety of options for deriving the toxicity values. In addition, there are a variety of options for fitting the data and selecting and applying uncertainty factors. For these reasons, sometimes several alternative toxicity factors may be available from different sources for a specified chemical.

Widespread use of PFAS in commercial products and industrial processes (including application of biosolids on farmland) potentially has rendered presence of PFAS compounds ubiquitous in the environment. Therefore, uncertainty exists regarding understanding of actual background levels of PFAS in the environment. No PFAS soil background study has occurred in California; however, studies have been conducted in other states. For example, the Vermont Department of Environmental Conservation (VTDEC) performed a background study in surface soil throughout the State of Vermont (Zhu et al. 2019). The background threshold values (calculated excluding outliers), represented by the 95 percent upper tolerance limit, are 3.4, 1.6, and 0.59 µg/kg for PFOS, PFOA, and PFBS, respectively. These background values will not be used to evaluate the data in this SI and are provided only for context and understanding of the uncertainty regarding potential presence of PFAS due to general anthropogenic sources.

Table 2-1. PFAS Screening Levels

State / Agency		Federal / USEPA		California Water Board		
Media		Groundwater	Soil	Groundwater	Soil	
Standard		RSL[1]	Residential RSL[1]	MCL Priority ESL[2]	Human Health Resident Cancer Risk ESL[2]	Ecologic Significantly Vegetated Area ESL[2]
Chemical	**CAS No.**	ng/L	µg/kg	ng/L	µg/kg	µg/kg
HFPO-DA	13252-13-6	6	23	NA	NA	NA
PFBS	375-73-5	600	1,900	NA	NA	NA
PFHxS	355-46-4	39	130	NA	NA	NA
PFNA	375-95-1	5.9	19	NA	NA	NA
PFOA	335-67-1	6	19	5.1	3.8	84
PFOS	1763-23-1	4	13	6.5	12	13

Notes:

1 Value cited from EPA Regional Screening Levels Tables, hazard quotient of 0.1 (USEPA 2022b)

2 Value cited from California Water Board/San Francisco Bay Regional Water Quality Control Board Transmittal of Interim Final Environmental Screening Levels (Regional Water Board 2020)

Abbreviations:

ng/L - nanogram per liter
CAS - Chemical Abstracts Service
µg/kg - microgram per kilogram
NA - No value specified in reference document
RSL - Regional Screening Level
USEPA - United States Environmental Protection Agency
ESL - Environmental Screening Level

Chemical Abbreviations:

PFAS - per- and polyfluoroalkyl substances
PFOA - perfluorooctanoic acid
PFOS - perfluorooctane sulfonate
PFBS - perfluorobutanesulfonic acid
PFNA - perfluorononanoic acid
PFHxS - perfluorohexanesulfonic acid
HFPO-DA - hexafluoropropylene oxide dimer acid (Commonly referred to as GenX)

SECTION 3
FACILITY BACKGROUND AND HISTORY

3.1 PHYSICAL SETTING

NASA ARC is at the southern end of San Francisco Bay, approximately 25 miles east of the Pacific Coast. The City of Mountain View is adjacent to the western and southern boundaries of ARC. The eastern and southern boundaries adjoin the City of Sunnyvale. Downtown San Jose is 7 miles southeast, and the City of San Francisco is 32 miles northwest of ARC. Figure 1-1 shows the ARC property boundary.

ARC is one of several centers within NASA, a federal agency. It is an active facility with no plans for closure or transfer. ARC consists of the NASA ARC campus, the former Naval Air Station (NAS) Moffett Field, and a part of the Sunnyvale Golf Course.

3.2 FACILITY HISTORY

NASA ARC is a federal facility owned and operated by NASA. The primary mission of ARC is research and development in the fields of planetary atmospheric entry systems, advanced computing and information technology systems, aero-sciences, air traffic management, astrobiology and life sciences, cost-effective space missions, intelligent and adaptive systems, and space and earth science.

Before 1933, the area occupied by ARC was mostly farmland. In 1933, the Moffett Federal Airfield (MFA) was commissioned as NAS Sunnyvale to support the West Coast dirigibles of the U.S. Department of the Navy's (Navy) lighter-than-air (LTA) program. The station was transferred to the U.S. Army Air Corps for use as a training base in 1935.

In 1939, the Ames Aeronautical Laboratory of the National Advisory Committee for Aeronautics was established west of NAS. It consisted of wind tunnels, hangars, aircraft operations, and other research facilities.

In 1942, NAS was returned to Navy control and renamed NAS Moffett Field. At that time, the heavier-than-air (HTA) program was initiated and began to take precedence over the LTA program.

In 1945, the HTA program was moved to another facility, and NAS Moffett Field was used as a major overhaul and repair base. The LTA program was discontinued at NAS Moffett Field in 1947. In 1949, the station became home to the Military Air Transport Service Squadron.

By 1950, NAS Moffett Field was the largest naval air transport base on the West Coast and became the first all-weather NAS. NAS Moffett Field became headquarters for the Commander Patrol Wings of the U.S. Pacific Fleet in 1973. NAS Moffett Field supported anti-submarine warfare training and patrol squadrons. The station supported more than 70 tenant units, including the Commander Patrol Wings, U.S. Pacific Fleet, and CANG. No heavy manufacturing or major aircraft maintenance was conducted at NAS Moffett Field, but a significant amount of unit- and intermediate-level maintenance occurred.

In July 1994, all active Navy military operations at NAS Moffett Field ended when the base was transferred to NASA and renamed MFA. NAS Moffett Field was closed in response to the Base Realignment and Closure (BRAC) program. Stewardship of the MFA and a portion of the adjoining Sunnyvale Golf Course were transferred to ARC. The military housing portion was retained by DoD during the transfer, and the United States Air Force (Air Force) took charge. The Air Force later transferred military housing to the U.S. Department of the Army.

In 2014, Alphabet Inc.'s subsidiary, Planetary Ventures LLC (PV) signed a 60-year MFA lease agreement for the PV Bay View Lease Area, and the Moffett Federal Airfield Lease Area. The lease includes restoration of Hangar 1, rehabilitation of Hangars 2 and 3, and property development associated with research, development, assembly, and testing in the areas of space exploration, aviation, rover and robotics, and other emerging technologies (NASA 2014).

The CANG 129th Aerospace Rescue and Recovery Group has been at Moffett Field since 1984. Its mission is to conduct combat search and rescue operations on a global scale (CANG 2004).

3.3 RESTORATION PROGRAM AT ARC

Numerous investigations of potential sources of soil and groundwater contamination have been performed at ARC. In the early 1990s, NASA developed and implemented the NASA Ames Research Center-wide Sampling and Analysis Program for systematic evaluation of potential soil

and groundwater impacts at ARC. As part of this program and subsequent investigations, 16 AOIs were identified at ARC. Some of the AOIs with underground storage tanks (UST) or aboveground storage tanks (AST) are addressed under other regulatory programs (Earth Resources Technology, Inc. [ERT] 2019a).

Some PFAS sampling activities have occurred at ARC prior to this SI, which are further discussed under Section 3.6 and results are included in Appendix B, as received. The following subsections overview other remediation activities and groundwater contaminants investigated over the years at ARC.

3.3.1 Navy Installation Restoration Sites

Under the BRAC program, the DoD began an IR site investigation to address releases of wastes. Since the early 1930s, wastes had been generated at Moffett Field through maintenance operations, fuel management, and fire training. Disposed chemicals included waste oils and jet fuels; solvents, cleaners, and washing compounds; and lesser amounts of gasoline, hydraulic fluids, asbestos, paints, pesticides, battery acid, and polychlorinated biphenyls (PCBs). Disposal of wastes occurred in unlined landfills, drainage ditches, and unpaved areas in the Stormwater Retention Pond (SWRP) and in an unlined wastewater pond. Other waste disposal areas included underground tanks and sumps (all now removed) that contained petroleum hydrocarbons, and fuels and wastewater contaminated with oils and solvents (Tetra Tech 1997).

In accordance with the Navy – NASA Memorandum of Agreement (MOU) dated April 6, 2017, the Navy retains lead agency responsibility for two IR sites: Site 26 – East-Side Aquifers Treatment System (EATS) (IR 26), and Site 28 – West-Side Aquifers Treatment System (WATS) (IR 28) – where NASA is performing operations and maintenance, and the DoD is investigating vapor intrusion and the Traffic Island portion.

By October 2015, 21 IR sites had achieved regulatory closure. NASA agreed under the Federal Facility Agreement (FFA) to accept lead agency responsibility for the Site 29 – Hangar 1 (IR Site 29), and responsibility for implementation of land use controls (LUCs) as Property Owner of Site 1 – Runway Landfill (IR Site 1) and Site 22 – Landfill (IR Site 22). As lead agency, NASA accepted responsibility for all current and future CERCLA actions. As of October 1, 2021, the Navy is the

Lead Agency for Site 26, but NASA performs long-term monitoring. These responsibilities are incorporated into the annual Fiscal Year 2020 Site Management Plan for the ARC FFA (ERT 2019a).

Further discussion about the groundwater plumes at ARC corresponding to EATS and WATS follows.

3.3.2 Middlefield-Ellis-Whisman Regional Plume

South of ARC, historical land use across U.S. Highway 101 was agricultural. Orchards, row crops, and greenhouse gardening dominated the area. During the 1960s and 1970s, commercial and light industrial development began, and several industrial companies conducted semiconductor, electronics, and other manufacturing and research in the area bounded by four roads: East Middlefield Road (M), Ellis Street (E), North Whisman Road (W), and U.S. Highway 101 (USEPA 2019). This area is commonly called Middlefield-Ellis-Whisman, or MEW.

Within the MEW area, companies involved in manufacture of silicon chips and semiconductors, along with metal finishing operations, parts cleaning, aircraft maintenance, aerospace research and development, and missile construction, discharged trichloroethene (TCE) and other contaminants to groundwater (USEPA 2004). As groundwater flowed northward from the MEW area toward ARC and San Francisco Bay, the discharges created a TCE plume that extended onto ARC.

The MEW area and plume were listed on the National Priorities List (NPL) as three Superfund sites: Fairchild Semiconductor Corp.–Mountain View Superfund site, Raytheon Company Superfund site, and Intel Corp.–Mountain View Superfund site. These three NPL sites comprise the MEW Superfund Study Area. The MEW companies began extracting and treating groundwater in 1998 (USEPA 2019).

The MEW groundwater plume resulted primarily from off-site, upgradient sources (the MEW Superfund Study Area) and secondarily from previous Navy operations at former NAS Moffett Field.

The commingled groundwater plume on ARC is under remediation pursuant to the 1989 MEW Record of Decision (ROD) issued by USEPA (USEPA 1989) and two subsequent Explanations of

Significant Differences (USEPA 1990, 1996). As described in the MEW ROD, groundwater cleanup includes initial actions, which have been completed, and the current long-term remedial phase that involves groundwater extraction and treatment. The volatile organic compounds (VOCs) addressed in the MEW ROD are assigned to both facility-specific and regional responsibilities. Each of the MEW companies is responsible for investigation, remediation, and source control of VOCs in soil and groundwater at its facility-specific property south of U.S. Highway 101. The MEW companies are jointly responsible, through the Regional Groundwater Remediation Program (RGRP), for remediation of VOCs in groundwater that have bypassed the source control areas and are not being captured by the facility-specific source control systems or that cannot be attributed to a sole source (USEPA 2004).

NASA is operating WATS (Site 28) and enforcing LUCs and institutional controls (ICs) associated with the MEW regional plume, but is not the lead agency. In accordance with the Navy – NASA MOU dated April 6, 2017, the Navy retains lead agency responsibility.

3.3.3 Orion Park Plume

The Orion Park Plume, possibly associated with the MEW regional plume, is along the western edge of ARC. The Orion Park Plume is named after the Navy's former Orion Park housing area. Several investigations in and around the former Orion Park housing area have concluded that the source of the VOC plume is upgradient of the housing area at an unidentified location (ERT 2019b).

3.3.4 EATS Plume

In addition to the commingled groundwater plume in the WATS area that resulted from former Navy operations, another chlorinated VOC groundwater plume is east of the airfield runways in the area known as EATS.

In 1996, the Navy signed the ROD for Operable Unit (OU) 5 (Navy 1996). The ROD divided OU 5 into northern and southern groundwater contaminant plumes. Groundwater monitoring was the only action required for the northern plume. The remedy selected and implemented for the southern plume at OU 5 included extracting and treating groundwater to drinking water MCLs by EATS,

monitoring groundwater, and implementing ICs to prevent human exposure to or ingestion of contaminated groundwater (Naval Facilities Engineering Command [NAVFAC] 2019).

EATS operated from January 1999 to July 2003. In 2003, EATS was shut down after an efficiency and efficacy evaluation showed that it was not cost effective. In 2014, a ROD amendment selected (1) in situ bio-stimulation and bioaugmentation treatment in the portions of the groundwater plume with highest remaining concentrations of contaminants of concern (COCs), (2) monitored natural attenuation, and (3) ICs (NAVFAC 2019).

In 2017, NASA completed ICs for IR Site 26. On July 27, 2021, the Navy issued a Memo to File for Non-Significant Modification to Final Record of Decision Amendment for IR Site 26 that changed the shape of the LUC area for Site 26. Additionally, the Navy submitted and USEPA approved an Interim Remedial Action Completion Report (IRACR) changing the remaining remedy to long-term monitoring until monitored natural attenuation results would indicate achievement of the cleanup standards (Navy 2021).

3.4 GEOLOGIC AND HYDROGEOLOGIC SETTING

Bedrock at NASA ARC is composed of Franciscan sediments encountered in boreholes at 1,370 feet below ground surface [bgs]. The Franciscan Formation is overlain unconformably by the Santa Clara Formation, which consists of clays and gravelly sand aquifers. The Santa Clara Formation aquifers are the South Bay's primary domestic water source. A thick sequence of fine-grained, older alluvial deposits caps the Santa Clara Formation and serves as an aquitard that separates it from younger, shallower water-bearing alluvial sands and interbedded clays. Although not used for drinking water, the shallow aquifer is directly below NASA ARC and extends to about 240 feet bgs.

The young alluvium has been separated into four discrete units. Only three of the four units have been mapped on the site: coarse-grained alluvium (Qhac), medium-grained alluvium (Qham), and fine-grained alluvium (Qhaf). Both the coarse- and medium-grained alluvium represent deposition at the distal end of alluvial fans. These deposits are interfingered with fine-grained sediments deposited by San Francisco Bay. Vertical transmission of groundwater and associated contaminants is augmented by increasing vertical continuity among the interspersed sands. The entire sequence is covered by about 5 feet of bay mud or artificial fill.

3.5 HYDROLOGICAL SETTING

ARC lies within the Santa Clara Valley, which is a long, narrow trough and a coastal watershed that borders San Francisco Bay. The basin is composed of gently sloping topography of interbedded alluvial fans that combine to form the valley floor and coastal lowlands. Figure 3-1 shows the sloping topography from the south to the Bay. General geologic materials consist of coarse-grained stream channel deposits (sands and gravels) and fine-grained deposits (clays and silts) that are adjacent to the channel deposits. The lateral extent of the coarse-grained deposits is often discontinuous and cut off by the finer-grained materials.

Three major bodies of surface water are near ARC: San Francisco Bay, Stevens Creek, and former salt-evaporation ponds managed by the United States Fish and Wildlife Service (USFWS). The former salt-evaporation ponds encompass several square miles at the southern end of the San Francisco Bay between Guadalupe Slough and Alviso Slough. Stevens Creek flows northward from the foothills of the Santa Cruz Mountains and along the western edge of ARC before discharging into San Francisco Bay.

The former salt-evaporation ponds are enclosed by levees and do not undergo changes in water level resulting from tidal fluctuations or local stream runoff. Evaporation pond water levels may, however, be affected by upward flow of groundwater from shallow aquifer zones.

ARC is situated along wetlands adjacent to San Francisco Bay and within the stormwater retention ponds. The facility has approximately 10,000 feet of wetland frontage along its north end. ARC houses both resident and migratory birds. Feeding areas include the wetlands north of the facility and the former saltwater evaporation ponds. Numerous species of terns, gulls, and wading birds are known to use the area for feeding and nesting (Tetra Tech 1994).

3.5.1 Groundwater

The shallow aquifer (the upper 240 feet) is subdivided into the A, B, and C aquifers. The upper (A and B aquifers) and lower (C aquifer) are separated by a laterally extensive clay aquitard (B/C aquitard) that effectively isolates the C aquifer (approximately 150 to 240 feet bgs) from the

upper aquifers. The upper aquifer is designated as a potential drinking water source. No water is pumped from the upper aquifer for drinking water use.

The A Zone is subdivided into two subzones (A1 and A2 aquifers), and the B Zone is separated into three subzones (B1, B2, and B3 aquifers). The A/B aquitard, which separates the A and B aquifers, may be locally discontinuous, so the A2/B1 zone is generally considered to be a single unit. Groundwater monitoring, pumping, and remediation of dissolved chlorinated solvents occur in both the A1 and A2/B1 aquifers on the west side of ARC within the MEW plume. Pumping of these hydraulically connected shallow aquifers may have resulted in groundwater mixing.

The A aquifer extends to an estimated depth of 65 feet bgs at ARC. Stringer-like historical alluvial channel deposits composed of sand and gravel constitute the permeable portion of the A aquifer. These historical channel deposits are embedded in silt and clay over-bank deposits, which are of low permeability, and provide complex, discontinuous, and tortuous pathways for contaminant transport. The channels generally are oriented in the north-south direction. The A aquifer is divided into the A1 and A2 aquifer zones by a discontinuous, low-permeability horizon (A1/A2 aquitard) located approximately between 22 and 29 feet bgs; this is based on lithologic logs, which show groundwater flow in the hydraulically-connected, unconfined A1/A2 aquifer.

As in most aquifers with alluvial channel deposits, these channel deposits provide lateral preferential flow paths through the aquifer, and most groundwater that flows through the A aquifer at NASA ARC likely passes through these deposits. The low permeability of the adjacent deposits and clay and silt alluvium limits groundwater flow through these units and creates lateral flow boundaries.

Local recharge to the shallow aquifers occurs from infiltration of stormwater in unpaved areas, leakage from unlined ditches and canals, infiltration from French drain systems, and leakage from stormwater drain corridors. Groundwater flow direction is generally from south to north in the western part of NASA ARC, and is deflected to the northeast where it is becomes influenced by underground drainage pipes that ultimately discharge north to the evaporation ponds and San Francisco Bay.

3.5.2 Stormwater

Stormwater from ARC is drained by two separate drainage areas. A drainage boundary runs south to northwest of the paved runways. Stormwater from the eastern drainage area, including the airfield runways and all land east of the runways, discharges directly or indirectly to the Building 191 pumping station. The stormwater pipe and trench also act as a groundwater drain along its corridor to the pumping station, which is evident by the upgradient deflection of groundwater elevation contours along the pipe. Building 191 pumps discharge water from the North Patrol Road Ditch into the Northern Channel. The stormwater then flows through a series of channels, including the Sunnyvale West Flood Control Channel and the Moffett Channel, to the Guadalupe Slough and eventually the San Francisco Bay. For the areas east of the runways, Hangar 2, Hangar 3, and EATS, stormwater flows into the Marriage Road ditch first and then flows to the North Patrol Road Ditch before entering the Building 191 pump station.

Stormwater from the western drainage area, including most of the area west of the runways, discharges to the Stormwater Settling Basin (SWSB). Overflow from SWSB spills onto the diked wetland area north of the basin known as the EDM and then flows to the Perimeter Road outfall structure on an overland flow basis. Three 48-inch storm drainpipes run beneath Perimeter Road to allow drainage of EDM into SWRP, where it evaporates during the dry season.

Two stormwater discharge locations are at ARC: the discharge location of Building 191 and the effluent outlet of SWSB in EDM. Additionally, there are two authorized non-stormwater discharge locations: (1) the combined MEW GWETS and NASA GWETS, and (2) the WATS.

3.6 AOPCs AND ASSOCIATED FACILITIES DESCRIPTIONS

A total of 26 AOPCs were identified during the PA for inspection in the SI. The 26 AOPCs recommended for SI included multiple PFAS source types. These included potential AFFF release areas, landfills, electroplating operations, and water treatment systems. Figure 1-2 shows the AOPC locations.

3.6.1 AOPC 1 – Former Firefighting Training Area (IR 10, 12, 20)

The NASA Fire Department serves as the Fire, Air Crash, and Rescue Station for ARC. Currently, no AFFF firefighting training areas are at ARC. Trainings proceed with propane-lit fires that are extinguished with water only.

Until 2018, AFFF was used for firefighting training. As a part of the annual training exercises, AFFF was discharged onto the runway or the adjacent grassy area. Photos of the 2018 firefighting training showing discharges onto the runway were included in the PAR (Tetra Tech 2021a). Drains on the runways where AFFF was released were closed during training to prevent AFFF from entering stormwater drains. The former firefighting training area includes a part of the IR 10 runways, the former AST area (IR 12), and the Zook Road fuel spill area (IR 20).

Historically and through September 1995, the Navy Fire Department provided services to the base and ARC (Tetra Tech 1994). Between 1995 and 2005, the 129th CANG performed firefighting operations, and within the following year the NASA Fire Department took over operations (NASA 2020a).

At IR 12, the Navy conducted firefighting training on the airfield next to the northwest edge of the runway and north of Hangar 1 within AOPC 1. Two berm pits were used from the 1950s to the 1990s to train firefighters. Before its removal in 1991, a 5,000-gallon AST fuel tank (IR 12) containing waste fuel was 120 feet north of the two pits. Jet propellant (JP)-4, JP-5, and diesel fuel and other chemicals and solvents would be pumped into the pits and set on fire as a training aid. Firefighting chemicals applied to the fires included bromochlorodifluoromethane, potassium bicarbonate, and AFFF (Tetra Tech 1994, NASA 2005a). As a source control measure, contaminated soil from the area surrounding the AST area was removed. Historical aerial photographs show the location of these firefighting training pits, IR 12, and areas of source control excavation. Backfilling efforts included the fire-training pits. Additional aerial photos show that Fire Training Pits 1 and 2 discharged into drainage ditches leading toward the Zook Road fuel spill area (IR 20) (NASA 2005a).

Previous groundwater investigations in IR 12 detected presence of five VOCs, 14 base neutral acids (BNAs), total petroleum hydrocarbons (TPH), oil and grease, and 19 metals. Following removal

action, the AST at IR 12 received closure from the Regional Water Board in 2002 (Regional Water Board 2002).

After the training pits were filled in 1995, the training locations varied from year to year and included several different sections of the runway. Photos from the 2018 firefighting training demonstrated AFFF dispersing onto adjacent downwind areas (Tetra Tech 2021a). The outline of AOPC 1 reflects potential areal coverage of AFFF from annual training exercises from the 1950s to 2018 (NASA 2020b).

Both the runway and Chase Park (IR 10) are south of North Patrol Road. The primary source of AFFF contamination in soil is runway-precipitation runoff that may have carried spilled fuels and lubricants to the surrounding ditches and drains. Groundwater in the area is known to contain chlorinated VOCs from the upgradient MEW site. A 1993 field investigation indicated presence of VOCs, BNAs, and TPHC in the soils in the area; concentrations of nine inorganic compounds exceeded background levels (IT Corporation 1993b).

IR 20, the Zook Road fuel spill area, is approximately 750 feet north of the NASA fuel farm. Contamination of the Zook Road fuel spill site resulted from spills from ASTs that stored off-specification aircraft fuels. Fieldwork conducted in 1992 indicated the presence of petroleum hydrocarbons, including kerosene, motor oil, and diesel. Groundwater samples collected in 1992 did not contain organic compounds (Tetra Tech 1994). A No Further Action (NFA) status for the petroleum fuel and fuel constituents was granted by the Regional Water Board in 2012 (Regional Water Board 2012).

Per the request of the Regional Water Board, ARC performed PFAS testing at the former firefighting training area. Groundwater samples were collected in September 2019 from wells W12-20 and W12-6, downgradient and cross gradient of IR 12, respectively. The samples were analyzed for 24 PFAS analytes via modified USEPA 537 method. Concentrations were higher at the downgradient well. PFOA was detected at 5,540 ng/L at well W12-20 and 457 ng/L at well W12-6; PFOS was detected at 4,090 ng/L at well W12-20 and 2,010 ng/L at well W12-6 (NASA 2019a). At the time of this sampling in 2019, these were the highest concentrations of PFAS in groundwater at ARC.

3.6.2 AOPC 2 – Crash Site (Sunnyvale Golf Course)

AOPC 2 includes four potential PFAS discharge sites: the Sunnyvale Golf Course and three possible off-site sources identified through an Environmental Data Resources, Inc. (EDR) Area Study Report keyword search (EDR 2019).

The Sunnyvale Golf Course is an 18-hole golf course built in 1968 on (then) Navy property south of the runway on the other side of U.S. Highway 101. According to the *New York Times* archive, 11 men aboard a NASA Convair 990 and five Navy personnel aboard a Lockheed P-3C Orion anti-submarine patrol plane died on April 12, 1973, when the two aircraft hit each other in midair, plunged onto the 12th fairway of the golf course, and exploded in flames (*New York Times* 1973). News footage of the event shows AFFF, a known source of PFAS, applied to the wreckage on the unpaved golf course (San Francisco State University 2020).

The EDR Area Study Report keyword search identified Calisolar, California Microwave, and E/M Lubricants as three possible off-site sources for PFAS discharge at AOPC 2 (EDR 2019). These locations were flagged for metal plating or coating operations and were included in the windshield survey. Based on observations during the windshield survey, these three sites no longer have active metal plating or coating operations. Calisolar (later Silicor Materials Inc.), at 985 Almanor Avenue, is the closest to ARC. It was founded in 2006 as a development company with the goal of manufacturing low-cost photovoltaic solar cells from silicon ingots designed for the solar industry instead of electronic grade polysilicon (University of California, Berkeley 2020). Historically, California Microwave manufactured electronic equipment for telecommunication transmissions and distribution and defense applications at 985 Almanor Avenue until 1996. Wastes at California Microwave included solvents and alodine solution. Soil and groundwater were impacted by site operations at 985 Almanor Avenue (CSWRCB 2020b). E/M Lubricants operated a metal coating facility at 875 Maude Avenue, where improper storage and handling of degreasing materials impacted soil and groundwater (CSWRCB 2020c).

3.6.3 AOPC 3 – Hangars 2 and 3 (IR 7)

IR 7 includes Hangars 2 and 3, the facilities around the hangars, and the surrounding paved area. This area is east of the runways and south of Marriage Road ditch. Before construction of Hangars 2

and 3 in 1942, the area was used for agriculture. No AFFF Fire Suppression Systems (FSSs) were installed in Hangars 2 and 3 (Tetra Tech 1994).

Disposal of wastes at IR 7 occurred in the unpaved areas at the corners of each hangar until 1978 when the area was paved. Hazardous wastes disposed of before 1978 included paint, paint strippers, oils, solvents, aviation hydraulic fluids (which may contain PFAS), and chlorinated solvents. VOCs, TPHC, metals, inorganics, and BNAs were COCs detected in the soil and groundwater from these wastes (Tetra Tech 1994). Soil contamination was addressed with removal actions, and groundwater contamination beneath IR 7 was addressed as a part of the EATS area remedy (IR 26 or OU 5) (USEPA 1994). After paving of the areas outside the hangars, portions of Hangar 3 (Building 47) were used by the National Guard for aircraft maintenance when CANG moved to Moffett Field in 1984 (CANG 2004). Since 2014, PV has conducted building rehabilitation of Hangars 2 and 3.

3.6.4 AOPC 4 – Former Engine Test Stand Area (IR 11)

The Engine Test Stand Area is approximately 500 feet north of the intersection of North Patrol Road and Northern Perimeter Road, and lies between the eastern edge of the runway and Devil's Slough. This site, which was used for testing turbine engines, is fenced and covered by a concrete and asphalt pad measuring approximately 200 by 200 feet. The primary source of contamination is runoff from precipitation and pressure washing of the slab, which drains to a grassy area to the south. The RI of this area was completed in 1993 (IT Corporation 1993b). Fieldwork in support of the RI indicated presence of VOCs (principally methylene chloride), BNAs (principally, bis(2-ethylhexyl) phthalate), TPHC, and inorganics. No PCBs were detected at IR 11 (Tetra Tech 1994). USEPA issued an NFA decision regarding soils in the Engine Test Stand Area. The groundwater contamination beneath is addressed as a part of the EATS area (IR 26 or OU 5) (USEPA 1994).

3.6.5 AOPC 5 – Hangar N211 (within AOI 3, formerly AOI 12)

Aircraft Servicing Facility Building N211 has had an active AFFF FSS from the 1940s to now. Currently, Flight Support Facility Building N211 and Building N211A share 2,500 gallons of AFFF among three storage tanks (NASA 2019b). These storage tanks are outside the northwest corner of the building and have secondary containment bladders for AFFF. Building N211 also contains two

small 136-liter AFFF tanks without secondary containment inside the hangar on the north and south walls. These tanks have hoses, are designed for manual use only, and, unlike the other parts of the building's FSS, are not activated by heat sensors.

In 2017, AFFF was switched to shorter chain (C6) AFFF firefighting foams. Phos-Chek 3 percent AFFF MIL-SPEC is the current firefighting foam used. According to the manufacturer, this product meets the intent of the USEPA 2010/2015 PFOA Stewardship Program. The ARC fire department vehicles and trailer also switched to Phos-Chek 3 percent AFFF MIL SPEC in 2017. Notably, NASA's policy also includes investigation of shorter chain PFAS spills.

In 1999, the Building N211 Zone B deluge system toggle released 5,000 gallons of 1 percent AFFF, and approximately 2,500 gallons entered the storm drain system. In 2001, 10 gallons of 1 percent AFFF was released into the storm drain when a contractor tested the FSS and failed to cover all the storm drains. Additionally, four documented releases of 3 percent AFFF by the Building N211 FSS occurred between 2002 and 2005. Approximately 5 to 10 gallons of 3 percent AFFF was released each time into storm drain catch basin 159F at the northwest corner of Building N211 (NASA 2002; 2003; 2005a, b; 2015). Liquids from catch basin 159F flow to the SWSB and EDM, and then to the SWRP. Further discussion of the stormwater system follows with AOPC 11 and AOPC 12.

Alodine, a metal finishing operation, also occurred in Building N211, which included an alodine metal finishing room (Room 163). PFAS were commonly used as a surfactant to control hexavalent chrome air emissions in metal finishing operations. Alodine, also commonly known as chem film, is a chromate conversion coating used to prepare aluminum surfaces for application of architectural metal finishing products. The operation was closed in September 2004 (Integrated Science Solutions, Inc./Science Applications International Corporation [ISSi/SAIC] Team 2005). A spill report indicated that an unknown quantity of chromium-containing release occurred in April 2005 (Santa Clara County Department of Environmental Health 2008).

3.6.6 AOPC 6 – Hangar N248 (AOI 3 East)

Aircraft Servicing Facility Building N248 has had an active AFFF FSS from the 1970s to now with storage tanks totaling 1,600 gallons of capacity (NASA 2019b). These tanks are outside the southwest corner of the building and have secondary containment bladders. Building N248 also has

two small interior 100-gallon AFFF tanks without secondary containment. These small tanks have hoses, are meant for manual use only, and, unlike the other parts of the building's FSS, are not activated by heat sensors. In 2017, AFFF was switched to shorter chain (C6), Phos Chek 3 percent AFFF MIL-SPEC (Tetra Tech 2021a). According to the manufacturer, this product meets the intent of the EPA 2010/2015 PFOA Stewardship Program.

In 1999, 75 gallons of 3 percent AFFF was released when the fire department tested the FSS. A hose was clamped to the edge of the tote with 5 feet of the hose dangling in the tank. When the system was activated, the hose flew out of the tote and discharged the AFFF (NASA 2015). In 2008, the FSS at Building N248 malfunctioned and an unknown amount of water and AFFF were released into Buildings N248 and N248A, the surrounding paved areas, and the storm drain system. After the initial response, residual foam and standing water remained in areas inside and outside of Buildings N248 and N248A. Disposal of the solid matter occurred as solid waste, and water was discharged to vegetated areas (NASA 2017).

3.6.7 AOPC 7 – Fire Department (Building 580)

Building 580 is between Zook Road and the Moffett Field runways, and serves as the Fire, Air Crash, and Rescue Station for the airfield. Historically and through September 1995, the Navy Fire Department maintained three engines, three crash trucks, and one rescue unit. In addition to providing services to the base itself, the Navy Fire Department provided fire services to ARC (Tetra Tech 1994). Between 1995 and 2005, the 129th CANG was responsible for firefighting operations, and within the following year, the NASA Fire Department took over and retained most of the former Air Force firefighters (NASA 2020a). Currently, three AFFF crash trucks and a trailer are parked at the north end of the building. The three fire engines parked at the south end of the station carry only water.

In 2017, AFFF was replaced with shorter chain (C6), Phos Chek 3 percent AFFF MIL-SPEC, which is deemed less harmful to the environment. Currently, AFFF is stored on site in 500-gallon containers at the north end of the building under the vehicle parking bay on a secondary containment pallet. The building has grassy areas stretching along its north and west sides and around its southeast corner.

The building has interior drains in the south and east garages and exterior safe drains that are closed during firefighting trainings, fuel spills, and some storm events.

Before 2017, AFFF and other firefighting protein foams were discharged as a part of an annual test. The areas surrounding Building 580, including the runway and grassy areas, were used for this annual training. In 2000, 300 gallons of 3 percent AFFF was discharged during the routine test of the FSS on an engine in an area where the storm drains were left uncovered (NASA 2015). More information on these firefighting training activities is in the PAR (Tetra Tech 2021a).

For the purposes of further investigation, AOPC 7 will be subsumed into AOPC 1.

3.6.8 AOPC 8 – Site 1 Runway Landfill (IR 1)

Site 1 (or IR 1) is a 14-acre former landfill that lies adjacent to the SWRP and former salt-evaporation ponds. The Site 1 landfill was in operation from 1965 until the late 1970s, and then was used as a pistol range until 1991. The landfill operated as a sanitary landfill and received wastes that included cardboard, lawn clippings, wood waste, and asbestos insulation wrapped in plastic bags. According to civilian and military personnel, the landfill also received domestic refuse, as well as waste from maintenance and military operations such as scrap equipment, paint, solvents, asbestos, jet fuels, and waste oil and materials contaminated with PCBs, which was placed in an excavation pit of approximately 8 to 12 feet below sea level at this site (Tetra Tech 1994).

The ROD for cleanup of Site 1 was signed in 1997. Remediation included transferring waste from the former Site 2 landfill to the unlined Site 1 landfill. A multi-layer cap was installed at this site consisting of lower and upper foundation layers, a low-permeability clay layer, a biotic barrier, and vegetative cover. In 1998, gas vents, a collection trench, a gas vent trench, monitoring wells, and drainage ditches were constructed at Site 1. The landfill is also surrounded by a fence and secured by a locked gate to control access (USEPA 2003a). Groundwater and landfill gas monitoring is performed to monitor the remedy. Responsibility for operation and maintenance and monitoring of the remedy was transferred from the Navy to NASA in 2016 (CSWRCB 2020d). The groundwater gradient in the landfill area is to the south away from the San Francisco Bay (Leidos 2020).

3.6.9 AOPC 9 – Site 2 Former Golf Course Landfill (IR 2)

The former 7-acre golf course landfill is located along the northeastern perimeter of the runway area, surrounded by North Perimeter Road, Macon Road, and North Patrol Road. Reportedly, the landfill received paints, thinners, solvents, lacquer, oil, fuel filters, and sawdust contaminated with transformer oil. Fill and refuse generally extended from 7 feet above mean sea level at the surface to 9 feet below mean sea level. The landfill was used from the 1940s through the early 1960s (Tetra Tech 1994).

As part of the remedy selected for Site 2 in the 1997 OU 1 ROD, wastes from Site 2 were excavated and consolidated into the Site 1 landfill. After excavation, 3 years of quarterly groundwater monitoring from July 1999 to October 2002 demonstrated that groundwater was not adversely impacted. USEPA concurred, and groundwater monitoring was discontinued (USEPA 2003a). Site 2 is considered a clean closure.

3.6.10 AOPC 10 – Site 22 Landfill (IR 22)

Site 22 (IR 22) is a closed landfill at the northeastern corner of former NAS Moffett Field that occupies 9.4 acres in the area beneath current golf course (the Golf Course at Moffett Field) holes 3, 6, and 7. The Site 22 landfill operated from about 1950 to 1967 primarily for disposal of domestic waste. Other wastes sent for disposal at the landfill included scrap equipment, paint, paint thinners, solvents, oil, fuel filters, and sawdust contaminated with PCBs (ERT 2019a).

From 1994 to 1999, the Navy conducted soil and groundwater investigations at Site 22. The investigations determined site COCs to be VOCs, semi-volatile organic compounds (SVOCs), and pesticides. The ROD specified a landfill cap (with biotic barrier), groundwater monitoring, landfill gas monitoring, and LUCs. Construction of the remedy was completed in August 2003 (ERT 2019a).

Groundwater is monitored quarterly for VOCs and SVOCs. There appears to be a groundwater gradient divide at the center of the former landfill area. LUCs consist of maintaining the integrity of the cap and surrounding stormwater drainage, preventing use of site groundwater, restricting residential use of this site, and conducting post-closure maintenance, monitoring, and reporting (ERT 2017).

3.6.11 AOPC 11 – Building 191 Pump Station

The Building 191 pump station, at the western end of both the North Patrol Road Ditch and the parallel Northern Channel, is one of two stormwater discharge locations at ARC. The other stormwater discharge location, SWSB/EDM, will be discussed in Section 3.6.12 (AOPC 12).

Stormwater from the eastern drainage system of ARC, including the airfield runways and areas east of the runways, discharges to Building 191. Stormwater and surface water are pumped out of the Building 191 concrete vault into the eastward-flowing Northern Channel. The Building 191 pump station operates with one main and one auxiliary pump, and the water level dictates whether one or two pumps operate (NASA 2017). The Building 191 pump station was built in 1953 when the Navy extended the length of the runways and filled in the stormwater ditch from the western portion of the base to the Northern Channel. The stormwater from the western side was then diverted by the Navy to what was later known as the SWRP. Stormwater from the runway areas and the eastern side of the facility has been discharged to the Northern Channel by use of the Building 191 pump station since 1953. From the Northern Channel, water flows east to the Moffett Channel through the Guadalupe Slough and then discharges to the southern end of San Francisco Bay. Additionally, groundwater likely is discharging to the Northern Channel at the Building 191 pump station. A horizontal conduit study by the Navy determined that portions of the storm drains may be subject to infiltration of groundwater through cracks and joints in the storm drain pipes. Furthermore, based on the shallow depth of the groundwater surface at the Northern Channel, groundwater is also infiltrating into the storm drain ditches on the eastern side of the base (NASA 2008).

Historically, the EATS plume had a northern plume and a southern plume as shown on the 1994 plume map. The northern plume extended from the middle of the golf course to the northernmost weapons bunker. TCE (at low concentrations) was the only COC; therefore, the ROD required monitoring only for the northern plume (PRC Environmental Management, Inc. [PRC] 1997). The northern plume no longer exists, and the theory is that pumping at Building 191 may have removed the low levels of TCE over the decades (Tetra Tech 2020).

3.6.12 AOPC 12 – Stormwater Settling Basin/Eastern Diked Marsh (within IR 25)

The SWSB is in the northwestern portion of ARC. The SWSB and discharge pipes were constructed in 1992 to collect contaminated sediment before discharge of the water to the SWRP. The SWSB is a concrete basin approximately 100 feet long and 75 feet wide that receives most stormwater drainage from the western portion of ARC, including the areas west of the runways such as Hangar N211 (AOPC 5). Stormwater enters the SWSB from the south, and settled stormwater exits through the effluent outfall at the northern portion of the SWSB into the EDM, which is within IR 25. During periods of heavy rainfall, stormwater may also flow through the SWSB overflow spillway directly into the EDM. Accumulated sediments within the SWSB are removed annually for off-site disposal. Sediments from the surface of the EDM at the two SWSB outfall locations are sampled annually for COCs, including PCBs, dichlorodiphenyltrichloroethane, lead, and zinc. The EDM sediment samples are analyzed for these COCs as part of the annual sediment and sampling reporting required in the FFA.

3.6.13 AOPC 13 – NASA Groundwater Extraction Treatment System

The NASA GWETS is at the corner of North Warehouse Road and H Lane. NASA entered into an agreement with the MEW Superfund Study Area potentially responsible parties (PRPs) (referred to as the MEW PRPs) to address source areas to the MEW regional plume in the northernmost area of ARC. This area is referred to as the NASA Ames Research Center's Groundwater Area of Responsibility to the MEW Regional Plume (AOIs 3, 7, and 9) (ERT 2019a). The NASA GWETS began operations in 2001 and currently treats up to 20 gallons per minute (gpm) of water extracted from A1 aquifer wells NASA-1A and NASA-3A. Groundwater extraction from wells NASA-2A and NASA-4A was suspended in 2009.

At the GWETS, extracted groundwater is pre-filtered by 25-micron bag filters before passing through two 5,000-pound granulated activated carbon (GAC) vessels operated in series. Treated groundwater is either discharged to Stevens Creek in accordance with NASA's National Pollutant Discharge Elimination System (NPDES) permit, or polished in the Building N271 Industrial Wastewater Pretreatment Plant (IWPP) by a reverse osmosis (RO) system before reuse as cooling water for the Arc Jet Complex, the nation's highest-powered arc-heated hyper-thermal test facility.

The NASA groundwater extraction well network captures areas downgradient of documented AFFF releases from AOPCs, including the firefighting training area (IR 12), Hangar N211, and Hangar N248. Unknown is whether GAC can remove all the PFAS from the past AFFF and chrome-plating discharges or any PFAS from off-site sources of the commingled MEW plume. GWETS effluent is discharged to either Stevens Creek, which flows into the Bay, or the reuse pipeline into the Building N271 IWPP discussed as part of AOPC 20.

3.6.14 AOPC 14 – Middlefield-Ellis-Whisman Groundwater Extraction Treatment System

As discussed in Section 3.6.24, a commingled groundwater plume within the central portion of ARC resulted primarily from off-site, upgradient sources (the MEW Superfund Study Area) and from previous Navy operations at former NAS Moffett Field. The MEW companies had been involved in the manufacturing of silicon chips, semiconductors, metal finishing operations, parts cleaning, aircraft maintenance, aerospace research and development, and missile construction (Tetra Tech 1994).

At the MEW GWETS, which began operation in 1998, groundwater is treated by two low-profile air strippers operated in series. Vapor emissions from the primary air stripper are abated by two 4,000-pound vapor-phase carbon vessels in series. Treated groundwater is combined with the NASA GWETS effluent for either reuse on site as cooling water for the Arc Jet Complex, the nation's highest-powered arc-heated hyper-thermal test facility, or discharge to the Stevens Creek outfall under the NPDES general permit CAG912003, Order No. 99-051 (Schlumberger 2019).

Air stripping is not considered an effective method of treatment for PFAS, which suggests that PFAS will pass through the MEW GWETS. Consequently, any PFAS from the commingled plume in the extracted groundwater would either enter the Building N271 RO IWPP before reuse (discussed in Section 3.6.20 for AOPC 20) or would discharge to Stevens Creek, which flows into San Francisco Bay.

3.6.15 AOPC 15 – West-Side Aquifers Treatment System (IR 28)

The WATS is within the Site 28 area, west of Hangar 1 in Building 45A on Cummins Avenue. It began operation in 1998 and is capable of extracting groundwater from six A1 aquifer wells (EA1-1

through EA1-6), three A2/B1 aquifer wells (EA2-1 through EA2-3), and two sumps (Hangar 1 and EV-5), collectively treating water up to a rate of 120 gpm. The WATS remediates groundwater contaminants originating from Navy sources and the commingled MEW regional plume in Site 28. Extracted groundwater is pre-filtered by 25-micron bag filters before treatment via an advanced oxidation process that uses ozone and hydrogen peroxide. Treated water passes through one of two series of two 2,000-pound GAC vessels operating in parallel before discharge to the storm drain, ultimately flowing through the EDM and discharging into the NASA SWRP (ERT 2018).

The WATS well network captures groundwater from the commingled MEW plume, but unknown is whether the WATS can remove all the PFAS from the past AFFF discharges or from off-site sources of the plume.

3.6.16 AOPC 16 – North Patrol Road Ditch (IR 21) and Northern Channel (IR 27)

The North Patrol Road Ditch (IR 21) is a surface drainage feature that carries a portion of the surface stormwater flow from the eastern side of NAS Moffett Field, including the areas east of the runways, Hangar 2 and 3, EATS, and the East Patrol Road Ditch beside the East Patrol Road. Stormwater flows into the Marriage Road ditch first and then flows to the North Patrol Road Ditch before entering the Building 191 pump station to be discharged into the Northern Channel. Reportedly, the North Patrol Road Ditch was used for disposal of waste fluids, including motor oil, transmission fluid, and hydraulic fluids (Tetra Tech 1994). The Northern Channel (IR 27) is at the northern boundary of the eastern portion of ARC. Historically, the channel received stormwater runoff from the entire base. After extension of the runways in the early 1950s, stormwater from the western portion of the base was diverted to the current SWRP. Stormwater from the eastern portion of the base, including the runways and eastern side of Hangar 1, continues to discharge to the Northern Channel through the Building 191 pump station. From the Northern Channel, water flows east to the Moffett Channel through the Guadalupe Slough and then discharges to the southern end of San Francisco Bay.

In 1991, the Navy CERCLA sites were organized into six OUs. OU 6 included wetland areas, stormwater retention ponds, and storm drain channels. Within OU 6, designated as Site 27 were the Northern Channel, Marriage Road ditch, East Patrol Road Ditch beside East Patrol Road, North

Patrol Road Ditch, the berms along the Northern Channel, and a debris pile near the Building 191 pump station. The sediments and soil contained elevated concentrations of chemicals of ecological concern (COECs), including PCBs, pesticides, and metals. Remedial action in 2006 and 2007 involved removal of contaminated sediments from the entire length of the channel. The debris pile and several areas of contaminated soils in the berms of the channel were also removed (NASA 2008). Site 27, which includes the North Patrol Road Ditch and Northern Channel, received closure from USEPA in 2012 (USEPA 2012).

3.6.17 AOPC 17 – Marriage Road Ditch (IR 3)

The Marriage Road ditch (IR 3) is east of the runway and divides the golf course from the northern portion of NAS Moffett Field. According to the 1993 field investigation, approximately 150,000 to 750,000 gallons of volatile organic wastes, including solvents, fuels, detergents, paint strippers, and hydraulic fluids, was released into the ditch from adjacent properties. The primary contaminants are VOCs, including acetone, toluene, methylene chloride, and tetrachloroethene (PCE). BNAs, SVOCs, JP-5 (TPHC), PCBs, and metals were also detected at concentrations above background levels (IT Corporation 1993a).

Within OU 6, the Marriage Road ditch was designated with the Northern Channel as Site 27 (NASA 2008). Saturated soils were completely removed from Site 27 via channel dredging, and USEPA issued a no further action decision (NAVFAC 2019). The groundwater contamination beneath the Marriage Road ditch was addressed as a part of the EATS area (IR 26) (USEPA 1994).

On February 26, 2019, cloudy water was observed in the Marriage Road ditch, and duplicate stormwater samples were collected by PV's contractor, EKI, and NASA's contractor, ERT. PFAS were detected in both sets of samples, and maximum PFOA and PFOS concentrations were 13.5 and 20.0 ng/L, respectively (Vista Analytical Laboratory [Vista] 2019a, b). EKI commented on the possibility that no PFAS-free glassware was available at the time of sampling, and the low concentrations reported may have been from the glassware.

3.6.18 AOPC 18 – Lindbergh Avenue Storm Drain Ditch (AOI 6)

AOPC 18 (AOI 6), the former Lindbergh Avenue storm drain ditch, encompasses a former drainage ditch that paralleled Lindbergh Avenue beginning north of Building N250B and terminating south of North Perimeter Road after passing through a former diversion box location and the culvert outfall at North Perimeter Road. AOI 6 historically included the section of the former open storm drain channel and adjacent exposed soils that began near Building N250B (southern end of AOI 6), paralleled Lindbergh Avenue for approximately 2,000 feet, and terminated at a former diversion box.

Historical aerial photographs show an open, unlined storm drain channel that was used until May 1940. Reportedly, the concrete-lined channel, approximately 18 inches deep and 4 feet wide at the top, was constructed in the mid-1960s and used until its abandonment in 1993. The storm drain channel collected runoff from the areas along McCord Avenue, King Road, and Severyns Avenue, and from the Hangar N211 aircraft ramp, as well as from the western portion of NAS Moffett Field, including Hangar 1. Runoff from ARC and former NAS Moffett Field flowed down the storm drain channel to the diversion box where water could be directed west under Lindbergh Avenue into the EDM and SWRP or east to the former NAS Moffett Field lift station at Building 191, or both.

In the past, the stormwater drainage system also received ARC wastewater containing chemicals and oil. The wastewater consisted primarily of cooling tower water, water containing water treatment chemicals, and wastewater from shop sinks. During the previous few years before abandonment of the storm drain channel in 1993, only local rainwater and stormwater from ARC routinely flowed into the channel. A new storm drain composed of buried concrete pipe was built in early 1993. Thereafter, the former open storm drain channel was abandoned but remained open and unused until its removal in 1994. NASA conducted remediation at AOI 6 in 1994, 1995, 1996, and 2001 for lead and PCBs (Aroclors-1254, -1260, -1262, and -1268), removing the concrete lining and soil to depths extending to 3.5 feet along the entire 2,000-foot length of the ditch (ERT 2019a).

3.6.19 AOPC 19 – Stormwater Retention Pond (within IR 25)

AOPC 19 (IR 25) is at the northwest corner of NAS Moffett Field, encompassing about 230 acres that includes the EDM and SWRP. The western portion of the SWRP (about 54 acres) is now owned by the Midpeninsula Regional Open Space District and is outside the boundary of ARC. Since 1953,

IR 25 has been part of the stormwater management system at NAS Moffett Field. Stormwater from the western portion of this site flows through a settling basin (built in 1991 by NASA Ames Research Center) into the EDM and then through a culvert to the SWRP. The SWRP is surrounded by levees that prevent either entry of tidal water from San Francisco Bay into the pond or discharge of stormwater to the Bay. Stormwater is held in the SWRP until it evaporates (CSWRCB 2020e).

3.6.20 AOPC 20 – Building N271 Industrial Wastewater Pretreatment Plant

Industrial wastewater west of the runway is discharged without pretreatment to the City of Palo Alto under the Industrial Wastewater Discharge Permit 396101. Building N271 houses the RO units for on-site water reuse that has operated from 2013. The treated groundwater from the combined NASA/MEW GWETS is polished at the IWPP with a RO system before reuse in the ARC Jet Complex, the nation's highest-powered arc-heated hyper-thermal test facility. The reused water and the brine from the RO system are discharged to the Palo Alto sanitary sewer (ERT 2018, NASA 2016).

PFAS are not effectively removed by the MEW GWETS air stripper. The NASA GWETS GAC and IWPP RO both are recommended treatment methods for PFAS (ITRC 2018). However, GAC and RO are not currently optimized for PFAS removal. Furthermore, the effluents are not monitored for PFAS so there are no records indicating whether PFAS breakthrough occurs before each GAC unit is replaced or before the RO is regenerated. Consequently, any PFAS from the MEW GWETS or partially treated by the NASA GWETS GAC would enter the RO treatment system and remain untreated before discharging to the sanitary sewer. Also, brine from RO regeneration may contain PFAS, which may require appropriate disposal.

3.6.21 AOPC 21 – Former Industrial Wastewater Surface Impoundments (IR 4)

From 1968 to 1979, industrial wastewater east of the runway discharged without pretreatment to the City of Sunnyvale under the Industrial Wastewater Discharge Permit 1132 (NASA 2005b). The former wastewater impoundments are immediately south of the Marriage Road ditch, south of Macon Road. Before closure, the unlined ponds received approximately 15 million gallons of wastewater from aircraft washing, equipment maintenance, and miscellaneous operations in Hangars 2 and 3. Wastes reportedly included methyl ethyl ketone (MEK), dry cleaning solvent, paint sludge,

paint stripper, Freon-113, TCE, trichloroethane (TCA), carbon remover, ethylene glycol, fuel, and oil. These wastes were discharged into the holding ponds either directly or as components of wastewater. The most significant VOCs included total xylenes, chlorobenzene, toluene, and acetone, with significant concentrations of benzenes, such as 1,2-dichlorobenzene at 230,000 ppb. Concentration of JP-5 (TPHC) ranged from 15 to 6,760 parts per million. Aroclor was detected in one Phase II sample (Tetra Tech 1994). The IR 4 surface impoundments were removed, and soil closure was granted by USEPA as a part of OU 2, east closure. Aquifers located beneath are being addressed as part of OU 5, or IR 26, the EATS area (USEPA 1994).

3.6.22 AOPC 22 – Building N249 Outdoor Aerodynamic Research Facility

The Building N249 Outdoor Aerodynamic Research Facility (OARF) was built in 1969 and upgraded in 1994. It was used for static testing of vertical and/or short take-off and landing (V/STOL) and rotary wing aircrafts, for acoustic testing, and for analysis of aircraft models before testing in the 40- by 80-foot or 80- by 120-foot wind tunnels. OARF is an open-air, concrete-slab test facility with a model mounting test pad, data acquisition equipment, control room, and other necessary support equipment for remote model or aircraft operation. The OARF is currently mothballed (NASA 2012).

3.6.23 AOPC 23 – Hangar 4 (CANG) Building 662

Hangar 4, an open bay hangar east of the runways with adjacent shop space, was constructed in 2002. The hangar is equipped with four FSS underwing cannons. AFFF is stored in one 1,800-gallon AST within secondary containment inside the hangar, and is delivered by a pipe system to the maintenance bay, where it is then delivered through the underwing cannon. Four floor drains within the maintenance bay are connected to a 100,000 gallon- underground overflow tank (UOT). The outflow from the UOT discharges to a municipal sanitary sewer system (BB&E Inc. 2016). These floor drains are connected to another secondary containment system that is triggered when the FSS is turned on, leading the released AFFF into a 1,000-gallon UST instead of the sanitary sewer. More information on Hangar 4 site conditions is in the site visit checklist in the PAR (Tetra Tech 2021a).

The Hangar 4 tenant, CANG, was required by the Air Force to perform a PA in 2016 for PFAS. According to the PA report, recorded releases of AFFF occurred in 2005, 2006, 2007, and 2012. In

2005, an unspecified amount of AFFF was accidently released and likely washed down the sanitary sewer, storm drain, and grassy area beside Hangar 4. In 2006, another accidental release occurred because of a FSS malfunction, discharging 3,000 to 5,000 gallons of 3 percent AFFF to the sanitary sewer and the grassy area southeast of Hangar 4. In 2007, 50 gallons of AFFF was accidentally discharged to the storm drain and sanitary sewer during an FSS test. In 2012, the FSS was accidentally activated, resulting in an AFFF release whereby approximately 80,000 gallons was captured in the hangar secondary containment, 10,000 gallons entered the sanitary sewer, and under 1,000 gallons discharged into the storm drains (NASA 2015, BB&E, Inc. 2016).

PV has been working with CANG to construct new facilities within the CANG Cantonment to move CANG out of buildings leased by PV as a part of their MFA lease agreement. In May 2018, soil and grab groundwater samples were collected as a part of construction of underground utilities and structures; PFAS were found in two (2GWD1/D2 and CANGVHS) of the three soil samples (3GWA13/A2, 2GWD1/D2, and CANGVHS) and all five grab groundwater samples (3GWB2, 3GWA1, 2GWD1, 2GWB1, and 1GW1) (RPS Group, Inc. 2019). Collections of groundwater grab samples had occurred within different depth intervals (7.5 to 12.5, 10 to 15, and 12.5 to 17.5 feet bgs). Maximum concentration of PFOA (560 ng/L) was detected in the groundwater grab sample collected at the downgradient location 3GWA1-12.5-17.5. PFOS was detected at maximum concentration of 80.2 ng/L (and PFOA at 182 ng/L) at the upgradient location 1GW1-7.5-12.5. 1GW1 was the only sample from the 7.5- to 12.5-foot bgs interval and collected less than 0.25 mile from the property boundary to the east and the south where possible off-site sources contributed to PFAS concentrations. No known potential sources of PFAS were in the vicinity of the 1GW1 location, which is southwest of the CANG Cantonment Building 679 (CANG 2020b). Of note, Well PFAS-C was installed approximately 150 feet from Well 1GW1 during the SI to evaluate other nearby AOPCs.

Subsequent site investigation field activities were completed in September 2018 and January 2019, culminating in collection of 18 soil samples, four groundwater samples, and one sediment sample. Samples were analyzed via modified USEPA 537 method for six PFAS (PFBS, perfluoroheptanoic acid [PFHpA], PFHxS, PFNA, PFOS, and PFOA) consistent with Unregulated Contaminant Monitoring Rule (UCMR) 3 (AECOM 2019).

PFAS were present in all media sampled. PFOA was detected in the groundwater at maximum concentration of 580 ng/L and PFOS at maximum concentration of 44 ng/L, both at a downgradient boundary well (MF-BBW-MW01). PFOA was detected in the soil at maximum concentration of 16 µg/kg and PFOS at maximum concentration of 9 µg/kg. The one sediment sample collected from a nearby stormwater catch basin contained PFOA at concentration of 1.9 µg/kg and PFOS at concentration of 2.6 µg/kg (AECOM 2019). Previous results from samples collected around Hangar 4 are shown on Figure 5-3 and Figure 5-16.

Under the Air Force initiative, AFFF was switched to a short chain (C6) Ansulite 3 percent AFFF military specification (MIL-SPEC) foam in August 2018. The AFFF system's switches and heat sensors were being replaced as of February 2020. Approximately 30 employees currently work in the hangar (CANG 2020a).

3.6.24 AOPC 24 – Middlefield-Ellis-Whisman Plume

The commingled MEW VOC plume originated upgradient of ARC. The MEW companies had been involved in activities that required uses of a variety of VOCs that were stored in raw product and waste forms at facilities within the MEW Superfund Study Area (Tetra Tech 1994). The MEW companies no longer operate in the area.

Another possible off-site source identified through the EDR (2019) Area Study Report keyword search is Technitron, at 630 National Avenue within the MEW plume and flagged for metal plating or coating operations. Currently, the building is vacant. Further information from the windshield survey is documented in the PAR (Tetra Tech 2021a).

The primary COCs, TCE, and other VOCs in the MEW plume are partly attributable to the former semiconductor manufacturing and metal finishing operations at these MEW sites. Because use of PFAS is also associated with the semiconductor manufacturing and metal finishing operations, AOPC 24 is likely to be an off-site source of PFAS and is upgradient of NASA property (CSWRCB 2019a).

3.6.25 AOPC 25 – Orion Park Plume

The Orion Park VOC Plume located along the western property boundary is named after the Navy's former Orion Park housing area. Several investigations for VOCs in and around the former Orion Park housing area by NASA, DoD, and USEPA concluded that the source of the plume is upgradient of the housing area at an undefined location. To mitigate plume migration onto ARC, NASA voluntarily installed an air sparge and soil-vapor extraction (AS/SVE) barrier along the property boundary to remove VOCs. As PFAS are not volatile, the AS/SVE system would not have been effective in removing PFAS entering ARC. The AS/SVE system operated between 2008 and 2019 when it was shut down because it was no longer cost effective at removing the declined VOC mass in the groundwater plume. NASA continues to monitor the extent and magnitude of VOCs in the Orion Park Plume (ERT 2019b).

A possible off-site source of PFAS identified through the EDR (2019) Area Study Report keyword search was Innerconn Technologies at 327 Moffett Boulevard, which was flagged for metal plating or coating operations and included in the windshield survey. The site is currently a strip mall and no longer has active metal plating or coating operations (Tetra Tech 2021a). The site was used for research, development, and manufacturing of electronic components between 1959 and 1983 by Rheem Semiconductor Corporation, Raytheon (or its subsidiaries), and Innerconn. In 1989, the Regional Water Board issued a site cleanup requirement (SCR) for VOC contamination in the shallow groundwater. Contaminated soil was excavated, and groundwater extraction and treatment continued until 2001. The SCR was rescinded in 2007 after monitoring data demonstrated natural attenuation for TCE was 54 µg/L, below the environmental screening level of aquatic habitat (360 µg/L) and vapor intrusion (530 µg/L) (Regional Water Board 2007).

To date, the source for the Orion Park Plume has not been identified. At least one upgradient metal finishing operation may have contributed to the plume. Because use of PFAS is associated with metal finishing operations, AOPC 25 is likely to have an off-site source of PFAS that is upgradient of NASA property.

3.6.26 AOPC 26 – Eastern Boundary (IR 5)

AOPC 26, formerly entitled Lockheed Martin in the SIWP (Appendix A), now consists of two potential PFAS source areas: Lockheed Martin and IR Site 5.

Lockheed Martin: Lockheed Martin owns and operates the aerospace research and fabrication facility at 1111 Lockheed Martin Way, east of and adjacent to the NAS Moffett Field eastern property line. This facility is known as the Plant One Site.

Before 1956, the site location was farmland. Emplacement of the first Lockheed Martin facilities began in 1956 with construction of Building 103. Manufacturing operations began in 1958. By 1963, most of the Lockheed Martin manufacturing and chemical processing facilities were in place. The site covers about 660 acres and historically included about 35 large buildings and structures used as research, testing, manufacturing, laboratory, and office facilities.

In 1982, Lockheed Martin began operation of the Process Water Treatment and Reclamation Facility at the northeastern corner of this site to manage wastewater generated during fabrication and finishing of metal parts. This operation consisted of a treatment unit, two double-lined holding ponds covering 3 acres total, and two double-lined evaporation ponds covering 2 to 3 acres total. The evaporation ponds were used to store and condense concentrated acids, alkali, neutral salt baths, and other cleaning, pickling, plating, etching, and anodizing agents before off-site disposal (CSWRCB 2019b). In January 1987, Lockheed Martin presented the Regional Water Board with information that identified chlorinated and fluorinated VOCs, hexavalent chromium (Cr^{6+}), and elevated nitrate (NO_3) impacts on shallow groundwater beneath the site (Regional Water Board 2000).

The Lockheed Martin site is identified as a potential PFAS source because of historical metal finishing operations and presence of hexavalent chromium in the shallow groundwater, both of which are associated with potential sources of PFAS. Data are limited regarding potentiometric surface elevation and potential PFAS sources along the ARC eastern property boundary.

Monitoring data acquired by the Navy and Lockheed Martin suggest an unconfined aquifer divide along or east of the NASA property line. The potentiometric surface map in the Navy's Annual Groundwater Monitoring Reports suggest that groundwater from near the property line in the

unconfined aquifer flows north and northwesterly toward Building 191 (Navy 2017). The potentiometric surface map of Lockheed Martin's Plant One Site suggests that groundwater flows northeasterly from the property line toward the Bay (Cameron-Cole, LLC 2019). These two potentiometric maps provide evidence of a groundwater divide, with some groundwater from Lockheed Martin's property flowing toward the eastern boundary of NASA.

IR Site 5: IR 5 is located on the eastern side of NAS Moffett Field. The area is former petroleum-product fuel farm that hosted 15 USTs, six ASTs, and an oil-water separator (Tetra Tech 1994). Four of the large USTs were used to store jet fuel. Previous investigations found that subsurface soils and groundwater at IR 5 were contaminated by disposal of fuel/water mixtures in dry wells, along with possible leaking USTs and fuel spills (PRC 1996).

The dry wells were excavated and removed in 2001, and the Navy installed groundwater monitoring wells on the site that were sampled quarterly in 2002 and 2003. Total petroleum hydrocarbons (TPH), Benzene, Ethylbenzene, Toluene and Xylenes (BTEX), and Polycyclic Aromatic Hydrocarbon (PAH) were not detected in groundwater by the time of the final sampling event in 2003. Shallow soil samples were collected at IR 5 in 2009 and TPH and PAH concentrations were below cleanup standards, while BTEX was not detected. An NFA letter for the IR 5 North Fuel Farm Dry Wells was transmitted by the Regional Water Board in 2011 (Regional Water Board 2011).

At IR 5, investigations and removal actions have continued for remainder of contamination at the fuel farm until the present day. An NFA letter from the Regional Water Board for the remainder of the fuel farm is anticipated in 2022 or 2023.

3.7 CONCEPTUAL SITE MODEL

The purpose of a CSM is to identify how contaminants may move in the environment and to establish possible pathways of exposure to human or ecological receptors from contaminated media (soil, water, etc.). The CSM establishes the following:

- Site sources of contamination
- Contaminant release mechanisms and transport/migration pathways
- Exposure routes

- Potential receptors.

This information is necessary to determine possible exposure pathways. Components of the CSM for the sites are discussed below.

3.7.1 Site Sources of PFAS

Potential sources of PFAS at the following 24 AOPCs are known or suspected locations of AFFF release, landfills, effluent from water treatment systems or other non-AFFF sources at NASA ARC:

- **AFFF release sites:** PFAS from AFFF as the primary source at 12 AOPCs, resulting from:
    - AFFF use or release resulting from firefighting training (AOPCs 1 and 7)
    - Aircraft crashes (AOPC 2)
    - Accidental AFFF discharges at three hangars (AOPCs 5, 6, and 23),
    - AFFF use and releases into four stormwater ditches and systems (AOPCs 11, 12, 17, and 18)
    - NPDES stormwater discharge points (AOPCs 16 and 19)
- **Landfills:** Three former unlined landfills at AOPCs 8, 9, and 10.
- **Effluent from water treatment systems:** Three groundwater extraction systems that treat VOCs potentially commingled with PFAS (AOPCs 13, 14, and 15).
- **Non-AFFF sources with potential PFAS release:**
    - Five non-AFFF sources resulting from hydraulic fluid disposal or related use at four sites (AOPCs 3, 4, 21, and 22)
    - Brine from an industrial wastewater pretreatment plant (IWPP) (AOPC 20)
    - Fuel/water disposal, fuel spills, and leaking USTs (AOPC 26)

Two additional off-site AOPCs as well as AOPC 26 were identified as potential contributing sources of PFAS from upgradient industrial activities:

- AOPC 24 – MEW Plume
- AOPC 25 – Orion Park Plume
- AOPC 26 –Eastern Boundary, beside Lockheed Martin.

3.7.2 Transportation and Migration Pathways

Potential migration pathways at the identified areas, include the following:

- Migration of PFAS from known or possible historical AFFF usage or release to surface soils.

Incidents, trainings, and testing involving use of AFFF may have released PFAS to the environment. If PFAS were released to surface soil, the following migration pathways potentially would affect current conditions:

- Downward migration of contaminants from surface soil to subsurface soils via infiltration
- Downward migration of contaminants in soil to groundwater via infiltration
- Migration of contaminants in groundwater
- Migration of contaminants from groundwater or surface water into wastewater sewers
- Migration of contaminants to surface water and sediment from runoff, erosion, and effluent.

Suspected PFAS source areas are present in and around the main ARC campus. These areas may receive drainage and runoff from nearby runways, taxiways, and ramp areas during precipitation events. Therefore, stormwater outfalls, surface water, sediment, and wastewater may have been impacted by surficial runoff. The network of underground utilities may also act as conduits to convey groundwater containing PFAS.

3.7.3 Exposure Routes

PFAS are known to have been released or possibly could have been released to on-site soil and groundwater at 26 AOPCs. Potential for complete exposure pathways with ARC PFAS releases is low because NASA has imposed ICs preventing domestic use of shallow groundwater, including the two existing TCE groundwater plumes (EATS and MEW), and a VOC groundwater plume (Orion Park) that might contain PFAS. Also, an extensive aquiclude separates the shallow aquifer from the deeper aquifer. Finally, ARC is adjacent to San Francisco Bay, and there are no downgradient drinking water wells. Currently, NASA does not use the aquifer as a drinking water source and obtains water from an off-site municipal source (San Francisco Public Utilities Commission).

Potential PFAS releases from the eastern drainage area or in the groundwater east of the runways would be extracted by the Building 191 pump station and discharged to the Northern Channel. The North Channel then flows into the Guadalupe Slough and San Francisco Bay. Potential releases from the western drainage area would enter the EDM and then the SWRP, both of which are on the National Wetlands Inventory (NWI). The threatened Western Snowy Plover, threatened Ridgeway's Rail, endangered California Least Tern, and endangered Salt Marsh Harvest Mouse have been observed in the SWRP. Any remaining PFAS in the treated groundwater from the NASA or MEW GWETSs is discharged into Stevens Creek before entering the federally listed wetlands of San Francisco Bay.

PFAS are known to have been released or possibly could have been released to ARC soil at 26 AOPCs; however, many of these AOPCs do not have exposed surface soils. The objective of the SI was to determine whether PFAS are present or absent in on-site surface soil at the specific AOPCs. If PFAS are present at specific AOPCs in exposed surface soil, complete exposure pathways are possible for on-site workers and recreational receptors. In addition, residential exposure pathways could exist for residences of the Wescoat Village at Moffett Field, which is within 200 feet of AOPC 24 (MEW Plume). The long-chain PFAS in AFFF have been replaced, and the AFFF products containing shorter-chain PFAS are stored in tanks with secondary containment in Hangars 4 (CANG), N211, and N248, and at the fire department. On-site workers are at all AOPCs. Since March 2020, other individual departments within ARC have been updating their estimates of on-site workers. The inactive landfills of IR 1 (AOPC 8) and IR 22 (AOPC 10) have engineered covers, which eliminates a complete exposure pathway for workers or golfers who traverse these covers. The other inactive landfill, IR 2 (AOPC 9), had all waste removed and placed in IR 1 as part of a previous CERCLA cleanup effort (see Section 3.6.9).

Section 5 provides analytical results from the SI, and Section 6 offers recommendations and presents conclusions regarding each area.

3.7.4 Potential Receptors

Human Receptors

Current human receptors to be evaluated for potential exposure to media at each site are limited to industrial workers (e.g., NASA employees), maintenance workers, construction workers, visitors, trespassers, and recreational or commercial users of the off-site surface water bodies (e.g., boaters). Exposure includes contact with impacted soil, surface water, and sediment; and ingestion of organisms. Drinking water is not considered an exposure route as drinking water is delivered in pressurized lines from the San Francisco Public Utilities Commission to ARC.

Workers may access the following areas on a daily basis:

- AOPC 2 – Crash Site (Sunnyvale Golf Course)
- AOPC 3 – Hangars 2 & 3
- AOPC 5 – Hangar N211
- AOPC 6 – Hangar N248
- AOPC 7 – Fire Department (Building 580)
- AOPC 10 – Site 22 Landfill
- AOPC 23 – Hangar 4 (CANG) Building 662.

Maintenance workers may access any of the AOPCs periodically. Future construction workers could be exposed at any of the AOPCs if construction activities include land disturbance. If such activities would occur and the media are determined to be contaminated based on findings of this SI, proper engineering controls such as dust suppression and personal protective equipment (PPE) would be used as necessary to limit exposure.

Trespassers are unlikely to access any of the areas because of the level of security on the ARC Campus.

Recreational users have access to the off-site surface water bodies in the Don Edwards San Francisco Bay National Wildlife Refuge, and soils at the Sunnyvale Golf Course. Users may come into contact with surface water and sediment, and could harvest organisms for consumption.

Ecological Receptors

Numerous wetlands are within 15 downstream miles of NASA ARC. ARC has approximately 10,000 feet of wetlands frontage, with most within AOPC 19. These wetlands are on the NWI. The North Patrol Road Ditch and Northern Channel (AOPC 16) also border federally listed wetlands (EDR 2019).

Two federally designated endangered species are known to occur at or near ARC: the Salt Marsh Harvest Mouse and California Least Tern. The threatened Western Snowy Plover and threatened Ridgway's Rail also occur at or near ARC. The Salt Marsh Harvest Mouse, Western Snowy Plover, and Ridgway's Rail have been observed in AOPC 16. The burrowing owl, a California Department of Fish and Wildlife Service Species of Special Concern, is also known to occur at several locations throughout ARC (Tetra Tech 2017).

PFAS SITE INSPECTION FOR AMES RESEARCH CENTER

ARC PFAS SI
Draft
August 2022

PGH:P:\NASA AMES_PFAS_103IG667601(P)\GIS FILES\FROMKEVINMOORE\AMES_NASA\MXD\FIG3-1_TOPO.MXD 8/17/2022

SECTION 4
FIELD ACTIVITIES

Tetra Tech conducted field activities from July 7 to August 18, 2021, which involved collection of samples outlined in the SIWP (Appendix A), but with some exceptions discussed in Section 4.7. Due to lack of surface water at scoped sampling locations during this timeframe, BB&E later sampled surface water (on November 12, 2021) when sufficient precipitation allowed enough water to accumulate for adequate sample collection. Tetra Tech received surface water data for inclusion in this report.

Prior to mobilization, at a kickoff meeting on June 25, 2021, Tetra Tech and NASA reviewed the SIWP and discussed project schedule, logistics, site access, and safety considerations. Coordination activities prior to work included obtaining a utility locate/dig permit request form and locating and marking utilities. A Site-Specific Health and Safety Plan (SSHASP) was submitted to NASA and approved prior to field work. Each member of the field team reviewed and signed the SSHASP, and a health and safety meeting occurred on site during each day of field work to review job hazards.

Because PFAS are present in many consumer products (including some typical sampling equipment) and are widely present in the environment, special precautions were followed to avoid compromising sampling integrity during collection. The methods and protocols applied for collecting and handling PFAS samples, described in Tetra Tech's Standard Operating Procedure (SOP) SA-1.8 (included as Appendix C), were followed to prevent cross-contamination of PFAS from consumer items and field sampling equipment to the samples.

As outlined in the Sampling and Analysis Plan (Field Sampling Plan and Quality Assurance Project Plans) (SAP/QAPP) (Tetra Tech 2021b), which was reviewed and approved by USEPA and the Regional Water Board, quality assurance/quality control (QA/QC) samples were collected throughout the duration of the project. These included field reagent blanks (FRBs), matrix spikes (MSs), duplicates, and equipment blanks. These samples were collected at the following rates: FRBs one per day, MS one per 20 samples, duplicates one per 10 samples, and equipment blanks

one per type of non-disposable sampling equipment. A source water blank was also collected from the driller's water source used for equipment decontamination and drilling contact water.

Media proposed for sampling during this SI included soil (surface and subsurface), groundwater (permanent monitoring wells), surface water (stormwater settling basins and stormwater retention pond), and influent/effluent samples at each of four water treatment systems on site. Some modifications occurred during field implementation, which are outlined in Section 4.7. Table 4-1 through Table 4-4 summarize sample locations within each AOPC and in each medium inspected during the SI.

The following subsections provide details of field work during the PFAS SI.

4.1 MONITORING WELL INSTALLATION

Seven monitoring wells (PFAS-A, PFAS-C, PFAS-D, PFAS-E, PFAS-F, PFAS-G, and PFAS-H) were installed at AOPCs 2, 4, and 18 by a California-licensed well driller (Penecore) as part of the inspection. One well scoped for installation at AOPC 3 (PFAS-B) was not installed due to utility and concrete concerns around the hangars (further discussed in Section 4.7). Table 4-5 lists details of the monitoring wells installed. Figure 5-13 shows the location of PFAS-A. Figure 5-5 shows locations of PFAS-C, PFAS-D, PFAS-E, PFAS-F, and PFAS-G. Figure 5-7 shows the location of PFAS-H. Field documentation, including soil boring logs and monitoring well completion forms, are in Appendix D. A photographic log documenting the field inspection is in Appendix E.

Monitoring well installation procedures are described in Section 14.2.5 of the ARC SI SAP/QAPP (Tetra Tech 2021b). All wells were installed via direct-push drilling techniques and constructed with a 2-inch inner diameter (ID), 0.010-inch slot, schedule 40 polyvinyl chloride (PVC) screen (10-foot) and riser pipe. A #1 silica sand filter pack was installed from the bottom to 2 feet above the screened interval. A bentonite seal consisting of uncoated bentonite chips was placed on top of the filter pack and allowed to hydrate prior to grouting. Grouting consisted of mixing a high-solids-bentonite-cement grout slurry and filling the remaining borehole to the surface. Each monitoring well was completed with a watertight lockable well cap, and flush-mount surface completion.

Well development proceeded by use of a submersible pump that was consistently raised and lowered to surge the screen interval and pull out fines that had accumulated in the well. During well development, groundwater parameters (pH, specific conductivity, temperature, and turbidity) were measured every 5 to 10 minutes by use of a YSI ProDSS Water Quality Meter. The soil cuttings and development water were containerized and treated as investigation-derived waste (IDW), as discussed in Section 4.6.

A California-licensed surveyor surveyed the newly installed wells to determine top-of-casing elevations and spatial coordinates. Well survey information is in Appendix F.

4.2 SOIL SAMPLING

Field personnel collected soil samples at AOPCs 1, 2, 6, and 7 using a hand auger. Samples were collected within depth intervals of 0-6 and 6-24 inches bgs. Soils not used during sampling were put back into their respective boreholes. Bentonite chips were added to fill any remaining void.

In total, 28 soil samples from 14 locations were collected for PFAS analysis. Table 4-1 summarizes the soil samples, and Figure 5-1 (AOPCs 1, 6 and 7) and Figure 5-2 (AOPC 2) show soil sampling locations. Historical soil samples collected at AOPC 23 (Hangar 4), which was not investigated during the SI, are included in Figure 5-3 for reference.

During installation of new monitoring wells (Section 4.1), soil cores were also collected to assess lithology and ensure screens were properly set. Each soil core was thoroughly described with regard to sample recovery, lithology (color, grain size, sorting/grading, angularity, density/consistency, Unified Soil Classification System [USCS] designation, etc.), indications of contamination (staining or odors), moisture content, or any other notable observations/ information. Soil boring logs are in Appendix D.

4.3 GROUNDWATER SAMPLING

Groundwater samples were collected from 69 permanent monitoring wells (existing and new). Table 4-3 summarizes the monitoring well samples, and Figure 5-4 through Figure 5-15 show the groundwater sample locations. Historical groundwater samples collected at AOPC 23 (Hangar 4),

which was not investigated during the SI, are included in Figure 5-16 for reference. Groundwater sample log sheets are in Appendix D. Water level measurements from wells sampled are also listed in Table 4-6.

Sampling of the permanent monitoring wells accorded with USEPA Standard Operating Procedures for Low Stress (Low-Flow Purging and Sampling of Groundwater Monitoring Wells; see ARC SI SAP/QAPP Worksheet #21 for reference SOPs). Tubing in the existing monitoring wells was replaced with high-density polyethylene (HDPE) tubing prior to sampling to prevent cross-contamination, and HDPE tubing was used during collection of all new monitoring well samples.

In accordance with the ARC SI SAP/QAPP, sampling of permanent monitoring wells included use of HDPE and silicone tubing, a YSI ProDSS multi-parameter water quality meter, and a submersible, stainless-steel bladder pump. Field parameters and water levels were recorded during low-flow purging activities. These parameters included turbidity, dissolved oxygen, pH, oxidation-reduction potential (ORP), specific conductivity, temperature, and salinity. Disposal of tubing and other non-reusable sampling equipment occurred after work at each well. Reusable sampling equipment (i.e., bladder pumps) was decontaminated after work at each well. Purge water was containerized and treated as IDW (see Section 4.6).

4.4 SURFACE WATER SAMPLING

Surface water samples were not collected during the July 2021 sampling event due to lack of surface water. Subsequently, BB&E sampled surface water at four locations at NASA ARC on November 15, 2021. Table 4-4 shows the AOPCs where surface water was sampled: AOPC 11 (Building 191 Pump Station), AOPC 12 (Stormwater Settling Basin/Eastern Diked Marsh [within IR 25]), AOPC 13 (NASA Groundwater Extraction Treatment System)/AOPC 14 (Middlefield-Ellis-Whisman Groundwater Extraction Treatment System), and AOPC 19 (Stormwater Retention Ponds [within IR 25]). All surface water samples were collected by directly immersing the sample containers into the surface water. Pace Analytical provided the sample containers specifically for PFAS sampling. PFAS-free sampling procedures were followed. Conclusions and

recommendations based on data from these samples assume no changes in influent/effluent concentrations during the months between influent/effluent sampling and surface water sampling.

4.5 INFLUENT/EFFLUENT SAMPLES

The Industrial Wastewater Treatment Facility (IWTF) treats effluent from NASA ARC groundwater treatment systems by applying various treatment methods. In accordance with the ARC SI SAP/QAPP (Section 14.2.8), one influent and one effluent sample were collected from three treatment Systems (AOPC 13, AOPC 14, and AOPC 15), and one effluent sample was collected from one treatment System (AOPC 20) (see Figure 1-2). Influent and effluent samples were collected directly into HDPE sample bottles at influent and/or effluent spigots. Table 4-4 lists influent/effluent sampling locations.

4.6 INVESTIGATION-DERIVED WASTE MANAGEMENT

In accordance with the ARC SI SAP/QAPP, IDW consisting of purge water, development water, decontamination water, drilling fluid, and soil cuttings from well installation was containerized in 55-gallon drums. Twenty drums of IDW were generated (eight soil and 12 groundwater), labeled, and temporarily stored at Building 45A. Samples collected from each drum of containerized IDW included two representative composite solid samples and one composite water quality sample. NASA received IDW records and sample analytical results.

4.7 FIELD TASK MODIFICATIONS

One permanent monitoring well (PFAS-B), specified for installation at AOPC 3 in the SIWP and SAP/QAPP, was not installed due to concerns with drilling into utility lines and pipes, and drilling through historical concrete around Hangars 2 and 3. An alternate well location was not selected for installation, as further investigation is recommended at this AOPC based on results from other wells.

Another permanent monitoring well specified in the SIWP was not sampled (REG 6A-PIE at AOPC 5-Hangar N211), as this well could not be located. Field observation determined that well

14D12A (which was sampled at AOPC 5) was near REG 6A-PIE, and therefore data from 14D12A were determined adequate to achieve the SI objective in this area of AOPC 5.

Several other wells scoped for sampling could not be found in the field, and were therefore replaced with nearby wells. Wells 3/114-MW1 (AOPC 3), W7-19 (AOPC 3), W3-3 (AOPC 17), W2-2A (AOPC 9), and LGMW-1 (AOPC 10) in the SIWP and SAP/QAPP were not found, and therefore were replaced with nearby wells UST3-MW-02, W7-3, W3-8, W2-12, and WGC2-1, respectively.

One additional surface water sample was collected at the Stevens Creek outfall, for AOPCs 13 and 14, in addition to the three surface water sample locations (AOPC 11, AOPC 12, and AOPC 19) that were specified in the SAP/QAPP.

Table 4-1. Soil Sample Location Summary

Location	Depth [feet bgs]	Analysis PFAS	Rationale
AOPC1-SB01	0 - 0.5	X	Sample beside the paved areas where PFAs may have run off the pavement surface.
AOPC1-SB01	0.5 - 2	X	Sample beside the paved areas where PFAs may have run off the pavement surface.
AOPC1-SB02	0 - 0.5	X	Sample beside the paved areas where PFAs may have run off the pavement surface.
AOPC1-SB02	0.5 - 2	X	Sample beside the paved areas where PFAs may have run off the pavement surface.
AOPC1-SB03	0 - 0.5	X	Sample beside the paved areas where PFAs may have run off the pavement surface.
AOPC1-SB03	0.5 - 2	X	Sample beside the paved areas where PFAs may have run off the pavement surface.
AOPC1-SB04	0 - 0.5	X	Sample beside the paved areas where PFAs may have run off the pavement surface.
AOPC1-SB04	0.5 - 2	X	Sample beside the paved areas where PFAs may have run off the pavement surface.
AOPC2-SB01	0 - 0.5	X	Sample seven locations on the 12th fairway around the crash site location.
AOPC2-SB01	0.5 - 2	X	Sample seven locations on the 12th fairway around the crash site location.
AOPC2-SB02	0 - 0.5	X	Sample seven locations on the 12th fairway around the crash site location.
AOPC2-SB02	0.5 - 2	X	Sample seven locations on the 12th fairway around the crash site location.
AOPC2-SB03	0 - 0.5	X	Sample seven locations on the 12th fairway around the crash site location.
AOPC2-SB03	0.5 - 2	X	Sample seven locations on the 12th fairway around the crash site location.
AOPC2-SB04	0 - 0.5	X	Sample seven locations on the 12th fairway around the crash site location.
AOPC2-SB04	0.5 - 2	X	Sample seven locations on the 12th fairway around the crash site location.
AOPC2-SB05	0 - 0.5	X	Sample seven locations on the 12th fairway around the crash site location.
AOPC2-SB05	0.5 - 2	X	Sample seven locations on the 12th fairway around the crash site location.
AOPC2-SB06	0 - 0.5	X	Sample seven locations on the 12th fairway around the crash site location.
AOPC2-SB06	0.5 - 2	X	Sample seven locations on the 12th fairway around the crash site location.
AOPC2-SB07	0 - 0.5	X	Sample seven locations on the 12th fairway around the crash site location.
AOPC2-SB07	0.5 - 2	X	Sample seven locations on the 12th fairway around the crash site location.
AOPC6-SB01	0 - 0.5	X	Sample in the unpaved areas at one location where PFAS may have run off the paved areas.
AOPC6-SB01	0.5 - 2	X	Sample in the unpaved areas at one location where PFAS may have run off the paved areas.
AOPC7-SB01	0 - 0.5	X	Sample 2 discrete sample locations beside the paved areas where PFAS may have run off the pavement surface.
AOPC7-SB01	0.5 - 2	X	Sample 2 discrete sample locations beside the paved areas where PFAS may have run off the pavement surface.
AOPC7-SB02	0 - 0.5	X	Sample 2 discrete sample locations beside the paved areas where PFAS may have run off the pavement surface.
AOPC7-SB02	0.5 - 2	X	Sample 2 discrete sample locations beside the paved areas where PFAS may have run off the pavement surface.

SECTION 5
ANALYTICAL RESULTS AND FINDINGS

Analytical results and findings presented in this section are from samples collected within the 26 AOPCs identified in the PA.

Figures 5-1 through 5-18 spatially represent PFOA, PFOS, PFBS, HFPO-DA, PFNA, and PFHxS analytical results within the AOPCs. Figures with groundwater data also show the general direction of groundwater flow. Data collected prior to the SI are also shown on figures, as applicable, but only with limited datasets. Approximate groundwater flow direction in the western portion of ARC (west of the airfield) derives from 2018 groundwater elevation data (NASA 2019c). Approximate groundwater flow direction in the eastern portion of ARC derives from 2017 groundwater elevation data (Navy 2017). Approximate groundwater flow directions near AOPCs were adjusted to reflect recent 2021 groundwater level measurements during PFAS sampling. These figures show exceedances of federal RSLs listed in Table 2-1. Table 5-1 through Table 5-7 summarize all AOPCs by media, indicating which samples exceeded federal or CSWRCB RSLs. Table 5-8 includes QA/QC data. Complete laboratory analytical reports are in Appendix G, and data validation reports are in Appendix H.

The following subsections convey analytical results from sampling during the SI. As indicated in Table 4-2, data from monitoring wells close to potential source areas were used to assess several AOPCs. Based on water table elevations, existing wells were used that seemed obviously downgradient of a potential AOPC source to detect any potential releases. Often existing wells applied to multiple potential AOPCs. These monitoring wells are discussed or referenced between sections accordingly.

5.1 AOPC 1 – FORMER FIREFIGHTING TRAINING AREA (IR 10, 12, 20)

Soil and groundwater samples were collected at AOPC 1. Soil samples were collected at four locations. At each location, a surface (0 to 0.5 feet bgs) and subsurface (0.5 to 2 feet bgs) soil sample were collected, for a total of eight soil samples. Groundwater samples were collected at nine existing monitoring well locations, including two sampled during a previous sampling event during September 2019. Figure 5-1 and Figure 5-4 compare PFOA, PFOS, PFNA, PFHxS,

HFPO-DA, and PFBS concentrations at AOPC 1 to federal screening levels. Table 5-1 and Table 5-3 compare PFOA, PFOS, PFNA, PFHxS, HFPO-DA, and PFBS concentrations at AOPC 1 to federal and state screening levels.

Soil

Seventeen of the 28 PFAS compounds were detected in soil samples from AOPC 1. PFOS was detected at concentrations exceeding the soil RSL of 13 µg/kg in five samples (SB01, 0-0.5 at 61 µg/kg; SB01, 0.5-2 at 40 µg/kg; SB03, 0-0.5 at 300 µg/kg; SB03, 0.5-2 at 920 µg/kg; and SB04, 0-0.5 at 22 µg/kg), and above the human health and ecologic ESLs of 12 and 13 µg/kg, respectively, in the same five samples. PFOA was detected at concentrations exceeding the human health ESL of 3.8 µg/kg in five samples (SB01, 0-0.5 at 7 µg/kg; SB01, 0.5-2 at 30 µg/kg; SB02, 0.5-2 at 7.1 µg/kg; SB04, 0-0.5 at 120 µg/kg; and SB04, 0.5-2 at 45 µg/kg). PFOA concentrations exceeded the ecologic ESL of 84 µg/kg in one sample (SB04, 0-0.5 at 120 µg/kg). PFOA exceeded the soil RSL of 19 µg/kg in three samples (SB01, 0.5-2 at 30 µg/kg; SB04, 0-0.5 at 120 µg/kg; and SB04, 0.5-2 at 45 µg/kg). Highest concentration of PFNA detected was 0.71 µg/kg, which did not exceed the soil RSL at 13 µg/kg. Highest concentration of PFHxS detected was 42 µg/kg, which did not exceed the soil RSL at 130 µg/kg. HFPO-DA was non-detect in all samples. No PFBS screening level exceedances occurred, and the highest concentration detected was 1.8 µg/kg. Table 5-1 lists analytical data from soil samples, and Table 5-2 lists frequencies of detection and maximum concentrations in soil. Frequency of detection tables for each AOPC are in Appendix I.

Groundwater

Seventeen of the 28 PFAS compounds were detected in groundwater samples from AOPC 1. PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in six samples (11N21A1 at 350 ng/L, 14C60A at 140 ng/L, UST29-MW02 at 140 ng/L, W20-01 at 240 ng/L, WU4-25 at 27 ng/L, and PZA1-5C at 38 ng/L). PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L and the groundwater ESL of 6.5 ng/L in seven samples (11N21A1 at 7,700 ng/L, 14C60A at 1,000 ng/L, PZA1-5C at 110 ng/L, UST29-MW02 at 1,100 ng/L, W20-01 at 5,000 ng/L, WU4-25 at 13 ng/L, and WU4-9 at 18 ng/L). PFHxS was detected at concentrations exceeding the groundwater RSL

of 39 ng/L in six samples (11N21A1 at 3,300 ng/L, 14C60A at 970 ng/L, PZA1-5C at 250 ng/L, UST29-MW02 at 1,200 ng/L, and WU4-25 at 55 ng/L). PFNA was detected at concentration exceeding the groundwater RSL of 5.9 ng/L in one sample (W20-01 at 36 ng/L). There were no PFBS screening level exceedances, and the highest concentration detected was 520 ng/L. HFPO-DA was non-detect in all samples.

During the September 2019 sampling event, previously cited in Section 3.6.1 of this document, two samples were collected at AOPC 1. Four of the 28 compounds from the target analyte list were not included in this prior event. HFPO-DA, Chemical Abstracts Service (CAS) #13252-13-6 is the only one of those compounds compared to screening levels as a part of this inspection. Sixteen of the 24 PFAS analytes were detected in the samples collected during this event. PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in both samples (W12-6 at 457 ng/L and W12-20 at 5,540 ng/L). PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L and the groundwater ESL of 6.5 ng/L in both samples (W12-6 at 2,010 ng/L and W12-20 at 4,090 ng/L). PFHxS was detected at concentrations exceeding the groundwater RSL of 39 ng/L in both samples (W12-6 at 1,150 ng/L and W12-20 at 10,400 ng/L). PFNA was detected at concentration exceeding the groundwater RSL of 5.9 ng/L in one sample (W12-20 at 111 ng/L). PFBS was detected at concentration exceeding the groundwater RSL of 600 ng/L in one sample (W12-20 at 931 ng/L).

Monitoring well analytical results are listed in Table 5-3, and Table 5-4 lists frequencies of detection and maximum concentrations in groundwater. Frequency of detection tables for each AOPC are in Appendix I.

5.2 AOPC 2 – CRASH SITE (SUNNYVALE GOLF COURSE)

Soil and groundwater samples were collected at AOPC 2. Soil samples were collected at seven locations. At each location, a surface (0 to 0.5 feet bgs) and subsurface (0.5 to 2 feet bgs) soil sample were collected, for a total of 14 soil samples. Groundwater samples were collected at five locations. Figure 5-2 and Figure 5-5 compare PFOA, PFOS, PFNA, PFHxS, HFPO-DA, and PFBS concentrations within AOPC 2 to federal screening levels. Table 5-1 and Table 5-3

compare PFOA, PFOS, PFNA, PFHxS, HFPO-DA, and PFBS concentrations within AOPC 2 to federal and state screening levels.

Soil

Thirteen of the 28 PFAS were detected in soil samples from AOPC 2. PFOS was detected at concentrations exceeding the RSL, human health, and ecologic ESLs in four samples (SB01, 0-0.5 at 41 µg/kg; SB02, 0-0.5 at 19 µg/kg; SB05, 0-0.5 at 14 µg/kg; and SB05, 0.5-2 at 21 µg/kg). PFOA was detected at concentrations exceeding the human health ESL of 3.8 µg/kg in four samples (SB01, 0-0.5 at 6.3 µg/kg; SB01, 0.5-2 at 5.1 µg/kg; SB02, 0.5-2 at 7.7 µg/kg; and SB04, 0-0.5 at 4.2 µg/kg). PFBS was not detected above screening criteria at 1,900 µg/kg, and the highest concentration detected was an estimated 0.54 µg/kg in SB04, 0-0.5. PFHxS was not detected above screening criteria at 130 µg/kg, and the highest concentration detected was 14 µg/kg. PFNA was not detected above screening criteria at 19 µg/kg, and the highest concentration detected was 1.1 µg/kg. HFPO-DA was non-detect in all samples. Table 5-1 lists analytical data from soil samples, and Table 5-2 lists frequencies of detection and maximum concentrations in soil. Frequency of detection tables for each AOPC are in Appendix I.

Groundwater

Eleven of the 28 PFAS were detected in groundwater samples from AOPC 2. PFOS was detected at concentrations exceeding the groundwater ESL of 6.5 ng/L and the groundwater RSL of 4 ng/L in three samples (PFAS-F estimated at 11 ng/L, PFAS-F-FD estimated at 15 ng/L, and PFAS-C at 35 ng/L). PFOA and PFBS did not exceed any screening values, and highest concentrations detected were 4.6 and 9.5 ng/L, respectively. PFNA and PFHxS also did not exceed any screening values, and the highest concentrations detected were 1.9 (estimated) and 23 ng/L respectively. HFPO-DA was non-detect in all samples. Monitoring well analytical results are listed in Table 5-3, and Table 5-4 lists frequencies of detection and maximum concentrations in groundwater. Frequency of detection tables for each AOPC are in Appendix I.

5.3 AOPC 3 – HANGARS 2 AND 3 (IR 7)

Groundwater samples were collected within AOPC 3 at seven locations. Figure 5-6 compares PFOA, PFOS, PFNA, PFHxS, HFPO-DA, and PFBS concentrations within AOPC 3 to federal

screening levels. Table 5-3 compares PFOA, PFOS, PFNA, PFHxS, HFPO-DA, and PFBS concentrations within AOPC 3 to federal and state screening levels.

Groundwater

Nineteen of the 28 PFAS were detected in groundwater samples from AOPC 3. PFOA was detected at a concentration exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in six samples (W7-9 at 62 ng/L, W7-3 at 20 ng/L, W7-3-FD at 19 ng/L, W7-13 at 17 ng/L, W7-11 at 19 ng/L, and UST3-MW-02 at 15 ng/L). PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L and the groundwater ESL in seven samples (UST3-MW-02 at 50 ng/L, W7-10 at 57 ng/L, W7-9 at 160 ng/L, W7-13 at 23 ng/L, W7-3 at 33 ng/L, W7-3-FD at 30 ng/L, and W7-11 at 59 ng/L). PFNA was detected at concentration exceeding the groundwater RSL of 5.9 ng/L in one sample (W7-9 at 11 ng/L). HFPO-DA was detected at concentration exceeding the groundwater RSL of 6 ng/L in one sample (UST3-MW-02 estimated at 6.1 ng/L). PFHxS was detected at concentration exceeding the groundwater RSL of 39 ng/L in five samples (W7-9 at 180 ng/L, W7-3 at 40 ng/L, W7-3-FD at 42 ng/L, W7-11 at 65 ng/L, and UST3-MW-02 at 57 ng/L). PFBS was not detected above any screening levels, and the highest concentration detected was 14 ng/L. Monitoring well analytical results are listed in Table 5-3, and Table 5-4 lists frequencies of detection and maximum concentrations in groundwater. Frequency of detection tables for each AOPC are in Appendix I.

5.4 AOPC 4 – FORMER ENGINE TEST STAND AREA (IR 11)

Two groundwater samples were collected at AOPC 4. Figure 5-7 compares PFOA, PFOS, PFNA, PFHxS, HFPO-DA, and PFBS concentrations within AOPC 4 to federal screening levels. Table 5-3 compares PFOA, PFOS, PFNA, PFHxS, HFPO-DA, and PFBS concentrations within AOPC 4 to federal and state screening levels.

Groundwater

Nine of the 28 PFAS were detected in groundwater samples from AOPC 4. PFOA was detected at a concentration exceeding the groundwater RSL of 6 ng/L and groundwater ESL of 5.1 ng/L in both samples (PFAS-H at 16 ng/L and W11-2 at 110 ng/L). There were no screening level exceedances for PFBS, PFHxS or PFOS. PFNA and HFPO-DA were non-detect in all samples.

Monitoring well analytical results are listed in Table 5-3, and Table 5-4 lists frequencies of detection and maximum concentrations in groundwater. Frequency of detection tables for each AOPC are in Appendix I.

5.5 AOPC 5 – HANGAR N211 (WITHIN AOI 3, FORMERLY AOI 12)

Groundwater samples were collected within AOPC 5 at six locations. Figure 5-8 compares PFOA, PFOS, PFNA, PFHxS, HFPO-DA, and PFBS concentrations within AOPC 5 to federal screening levels. Table 5-3 compares PFOA, PFOS, PFNA, PFHxS, HFPO-DA, and PFBS concentrations within AOPC 5 to federal and state screening levels.

Groundwater

Nineteen of the 28 PFAS were detected in groundwater samples from AOPC 5. PFBS was detected in sample WU4-19 at 1,500 ng/L, which exceeds the groundwater RSL of 600 ng/L. PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in seven samples (14D28A at 77 ng/L, 14D36A at 380 ng/L, 14039A at 250 ng/L, WNB-14 at 120 ng/L, WU4-19 at 330 ng/L, and 14D12A and its duplicate sample, both of which contained 8.3 ng/L of this analyte). PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L and the groundwater ESL of 6.5 ng/L in seven samples (14D28A at 5,400 ng/L, 14D36A at 23,000 ng/L, 14D39A at 40,000 ng/L, WNB-14 at 410 ng/L, and WU4-19 at 3,300 ng/L, and 14D12A and its duplicate sample at 14 and 16 ng/L, respectively). PFHxS was detected at concentrations exceeding the groundwater RSL of 39 ng/L in five samples (14D28A at 780 ng/L, 14D36A at 3,000 ng/L, 14D39A at 3,900 ng/L, WNB-14 at 220 ng/L, and WU4-19 at 4,400 ng/L). PFNA was detected at concentrations exceeding the groundwater RSL of 5.9 ng/L in five samples (14D12A and its field duplicate at 6.6 and 7.5 ng/L, respectively; and 14D39A estimated at 8.7 ng/L, WNB-14 at 27 ng/L, and WU4-19 at 7.6 ng/L) HFPO-DA was non-detect in all samples. Monitoring well analytical results are listed in Table 5-3, and Table 5-4 lists frequencies of detection and maximum concentrations in groundwater. Frequency of detection tables for each AOPC are in Appendix I.

5.6 AOPC 6 – HANGAR N248 (AOI 3 EAST)

Soil and groundwater samples were collected at AOPC 6. Soil samples were collected at one location—a surface (0 to 0.5 feet bgs) and subsurface (0.5 to 2 feet bgs) soil samples, for a total of two samples. Groundwater samples were collected at three locations. Figure 5-1 and Figure 5-4 compare PFOA, PFOS, PFNA, PFHxS, HFPO-DA, and PFBS concentrations within AOPC 6 to federal screening levels. Table 5-1 and Table 5-3 compare PFOA, PFOS, PFNA, PFHxS, HFPO-DA, and PFBS concentrations within AOPC 6 to federal and state screening levels.

Soil

Twenty-one of the 28 PFAS were detected in soil samples from AOPC 6. PFOS was detected at concentrations of 120 µg/kg in SB01, 0-0.5 and 1,900 µg/kg in SB01, 0.5-2, which both exceed the RSL of 13 µg/kg and the human health and ecologic ESLs of 12 and 13 µg/kg, respectively. PFOA in sample SB01, 0.5-2 exceeded the human health ESL of 3.8 µg/kg at concentration of 5.1 µg/kg. There were no screening level exceedances of PFBS, PFNA, or PFHxS, and highest concentrations detected of each compound were 0.36, 0.43, and 92 µg/kg, respectively. HFPO-DA was non-detect in all samples. Table 5-1 lists analytical data from soil samples, and Table 5-2 lists frequencies of detection and maximum concentrations in soil. Frequency of detection tables for each AOPC are in Appendix I.

Groundwater

Thirteen of the 28 PFAS were detected in groundwater samples from AOPC 6. PFBS was detected at concentration of 620 ng/L in sample 14D02A, which exceeds the groundwater RSL of 600 ng/L. PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in all three samples (14C60A at 140 ng/L, 14D02A at 610 ng/L, and WU4-18 at 170 ng/L). PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L and the groundwater ESL of 6.5 ng/L in all three samples (14C60A at 1,000 ng/L, 14D02A at 15,000 ng/L, and WU4-18 at 3,300 ng/L). PFHxS concentrations exceeded the groundwater RSL of 39 ng/L in three samples (14C60A at 970 ng/L, 14D02A at 5,200 ng/L, and WU4-18 at 1,600 ng/L), and PFNA concentration exceeded the groundwater RSL of 5.9 ng/L in one sample (WU4-18 estimated at 14 ng/L). HFPO-DA was non-detect in all

samples. Monitoring well analytical results are listed in Table 5-3, and Table 5-4 lists frequencies of detection and maximum concentrations in groundwater. Frequency of detection tables for each AOPC are in Appendix I.

5.7 AOPC 7 – FIRE DEPARTMENT (BUILDING 580)

At AOPC 7, soil sampling occurred at two locations where a surface (0 to 0.5 feet bgs) and subsurface (0.5 to 2 feet bgs) soil sample were collected, for a total of four soil samples. Groundwater samples were collected at the five closest locations. Figure 5-1 and Figure 5-4 compare PFOA, PFOS, PFNA, PFHxS, HFPO-DA, and PFBS concentrations within AOPC 7 to federal screening levels. Table 5-1 and Table 5-3 compare PFOA, PFOS, PFNA, PFHxS, HFPO-DA, and PFBS concentrations within AOPC 7 to federal and state screening levels.

Soil

Eighteen of the 28 PFAS were detected in soil samples from AOPC 7. PFOS was detected at concentrations exceeding the soil RSL of 13 µg/kg and the human health and ecologic ESLs of 12 and 13 µg/kg, respectively, in all four samples (SB01, 0-0.5 at 110 µg/kg; SB01, 0.5-2 at 140 µg/kg; SB02, 0-0.5 at 300 µg/kg; and SB02, 0.5-2 at 1,500 µg/kg). PFOA was detected at concentration exceeding the human health ESL of 3.8 µg/kg in sample SB02, 0.5-2 (4.2 µg/kg). There were no PFHxS screening level exceedances, and the highest concentration detected was 23 µg/kg. There were no PFNA screening level exceedances, and the highest concentration detected was 2.6 µg/kg. There were no PFBS screening level exceedances, and the highest concentration detected was an estimated 0.55 µg/kg. HFPO-DA was non-detect in all samples. Table 5-1 lists soil analytical results, and Table 5-2 lists frequencies of detection and maximum concentrations in soil. Frequency of detection tables for each AOPC are in Appendix I.

Groundwater

Seventeen of the 28 PFAS were detected in groundwater samples from AOPC 7. PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in four samples (PZA1-5C at 38 ng/L, UST29-MW02 at 140 ng/L, W20-01 at 240 ng/L, and 14C60A at 140 ng/L). PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L and the groundwater ESL of 6.5 ng/L in five samples (WU4-9 at

18 ng/L, PZA1-5C at 110 ng/L, UST29-MW02 at 1,100 ng/L, W20-01 at 5,000 ng/L, and 14C60A at 1,000 ng/L). PFHxS exceeded the groundwater RSL of 39 ng/L in four samples (14C60A at 970 ng/L, PZA1-5C at 250 ng/L, W20-01 at 2,200 ng/L, and UST29-MW02 at 1,200 ng/L). PFNA exceeded the groundwater RSL of 5.9 ng/L in one sample (W20-01 at 36 ng/L). PFBS did not exceed any screening levels, and the highest concentration detected was 180 ng/L. HFPO-DA was non-detect in all samples. Monitoring well analytical results are listed in Table 5-3, and Table 5-4 lists frequencies of detection and maximum concentrations in groundwater. Frequency of detection tables for each AOPC are in Appendix I.

5.8 AOPC 8 – SITE 1 RUNWAY LANDFILL (IR 1)

Groundwater samples were collected within AOPC 8 at five locations. Figure 5-9 compares PFOA, PFOS, PFNA, PFHxS, HFPO-DA, and PFBS concentrations within AOPC 8 to federal screening levels. Table 5-3 compares PFOA, PFOS, PFNA, PFHxS, HFPO-DA, and PFBS concentrations within AOPC 8 to federal and state screening levels.

Groundwater

Ten of the 28 PFAS were detected in groundwater samples from AOPC 8. PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in two samples (W1-20 at an estimated concentration of 110 ng/L and W1-14 at 6.5 ng/L). PFOS, PFBS, and PFHxS did not exceed any screening levels, and the highest concentrations detected were 2.8, 6.9, and 6.3 ng/L, respectively. PFNA and HFPO-DA were non-detect in all samples. Monitoring well analytical results are listed in Table 5-3, and Table 5-4 lists frequencies of detection and maximum concentrations in groundwater. Frequency of detection tables for each AOPC are in Appendix I.

5.9 AOPC 9 – SITE 2 FORMER GOLF COURSE LANDFILL (IR 2)

Groundwater samples were collected at AOPC 9 at three locations. Figure 5-10 compares PFOA, PFOS, PFNA, PFHxS, HFPO-DA, and PFBS concentrations within AOPC 9 to federal screening levels. Table 5-3 compares PFOA, PFOS, PFNA, PFHxS, HFPO-DA, and PFBS concentrations within AOPC 9 to federal and state screening levels.

Groundwater

Thirteen of the 28 PFAS were detected in groundwater samples from AOPC 9. PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L in three samples (W2-12 at 48 ng/L, W2-13 at 32 ng/L, and W2-16 at 230 ng/L). PFOA concentrations in these three samples also exceeded the groundwater ESL of 5.1 ng/L. PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L in three samples (W2-12 at 89 ng/L, W2-13 at 9.1 ng/L, and W2-16 at 500 ng/L). PFOS concentrations in these three samples also exceeded the groundwater ESL of 6.5 ng/L. PFHxS was detected at concentrations exceeding the groundwater RSL of 39 ng/L in three samples (W2-12 at 110 ng/L, W2-13 at 110 ng/L, and W2-16 at 500 ng/L). PFBS did not exceed any screening levels, and the highest concentration detected was 67 ng/L. PFNA did not exceed any screening levels, and the highest concentration detected was 5.9 ng/L. HFPO-DA was non-detect in all samples. Monitoring well analytical results are listed in Table 5-3, and Table 5-4 lists frequencies of detection and maximum concentrations in groundwater. Frequency of detection tables for each AOPC are in Appendix I.

5.10 AOPC 10 – SITE 22 LANDFILL (IR 22)

Groundwater samples were collected within AOPC 10 at nine locations. Figure 5-11 compares PFOA, PFOS, PFNA, PFHxS, HFPO-DA, and PFBS concentrations within AOPC 10 to federal screening levels. Table 5-3 compares PFOA, PFOS, PFNA, PFHxS, HFPO-DA, and PFBS concentrations within AOPC 10 to federal and state screening levels.

Groundwater

Thirteen of the 28 PFAS were detected in groundwater samples from AOPC 10. PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in five samples (WGC2-8 at 41 ng/L, WGC2-5 at 11 ng/L, WGC2-4 at 17 ng/L, WGC2-11 at 8.3 ng/L, and WGC2-10 at 24 ng/L). PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L and the groundwater ESL of 6.5 ng/L in five samples (WGC2-8 at 53 ng/L, WGC2-4 at 34 ng/L, WGC2-11 at 32 ng/L, WGC2-1 at 4.5 ng/L, and WGC2-10 at 9.1 ng/L). PFHxS was detected at concentration exceeding the groundwater RSL of 39 ng/L in one sample (WCG2-11 at 120 ng/L). PFBS did not exceed any screening levels, and

the highest concentration detected was 37 ng/L. PFNA did not exceed any screening levels, and the highest concentration detected was an estimated 2.7 ng/L. HFPO-DA was non-detect in all samples. Monitoring well analytical results are listed in Table 5-3, and Table 5-4 lists frequencies of detection and maximum concentrations in groundwater. Frequency of detection tables for each AOPC are in Appendix I.

5.11 AOPC 11 – BUILDING 191 PUMP STATION

One surface water sample (B1914-P) was collected at AOPC 11. PFNA was detected at concentration of 13 ng/L, PFHxS was detected at concentration of 930 ng/L, PFBS was detected at concentration of 130 ng/L, PFOA was detected at concentration of 340 ng/L, and PFOS was detected at concentration of 1,400 ng/L. HFPO-DA was non-detect in all samples. No screening levels for surface water have been established. A summary of surface water sample results is in Table 5-5 and on Figure 5-7. Table 5-6 lists frequencies of detection and maximum concentrations in surface water samples.

5.12 AOPC 12 – STORMWATER SETTLING BASIN/EASTERN DIKED MARSH (WITHIN IR 25)

One surface water sample (SBOF-P) was collected at AOPC 12. PFBS was detected at concentration of 4 ng/L, PFOA was detected at estimated concentration of 1.1 ng/L, PFHxS was detected at 6 ng/L, and PFOS was detected at 5.5 ng/L. HFPO-DA and PFNA were non-detect in all samples. No screening levels for surface water have been established. A summary of surface water sample results is in Table 5-5 and on Figure 5-18. Table 5-6 lists frequencies of detection and maximum concentrations in surface water samples.

5.13 AOPC 13 – NASA GROUNDWATER EXTRACTION TREATMENT SYSTEM

Influent/Effluent

Influent and effluent results were compared to USEPA and State groundwater screening levels for indicator purposes only, as the surface water sample was collected months after the influent and effluent samples and may not represent the same discharge. One influent and one effluent sample were collected at AOPC 13.

Concentrations in the influent sample exceeded the groundwater RSLs for PFOS, PFHxS, and PFOA, as well as the groundwater ESLs for PFOS and PFOA. Eleven of the 28 PFAS compounds were detected in the samples from AOPC 13. The PFAS compounds detected and their concentrations in the influent were PFOS (6,800 ng/L), PFOA (330 ng/L), 6:2 fluorotelomer sulfonic acid (FTS) (4,300 ng/L), PFBS (310 ng/L), perfluorobutanoic acid (PFBA) (260 ng/L), perfluorohexanoic acid (PFHpA) (estimated 160 ng/L), perfluoroheptanesulfonic acid (PFHpS) (estimated 180 ng/L), perfluorohexanesulfonic acid (PFHxS) (2,600 ng/L), perfluorohexanoic acid (PFHxA) (1,600 ng/L), perfluoropentanesulfonic acid (PFPeS) (330 ng/L), and perfluoropentanoic acid (PFPeA) (620 ng/L).

PFAS detected and their concentrations in the effluent were PFOS (4.1 ng/L) and PFOA (estimated 0.97 ng/L). This PFOS concentration was 0.1 ng/L above the groundwater RSL of 4 ng/L; however, the concentration in the duplicate sample was an estimated 2.5 ng/L, which is 1.5 ng/L under the screening level. Influent/effluent analytical results are listed in Table 5-7. The location of AOPC 13 is shown on Figure 5-17.

Surface Water

One surface water sample (SCOF-P) was collected at AOPC 13. This is the same sample that was collected to evaluate AOPC 14 (see next section). PFBS was detected at estimated concentration of 1.3 ng/L, PFOA was detected at estimated concentration of 1.1 ng/L, PFHxS was detected at 5.4 ng/L, and PFOS was detected at concentration of 7.4 ng/L. HFPO-DA and PFNA were not detected in the sample. No screening levels for surface water have been established. A summary of surface water sample results is in Table 5-5 and on Figure 5-17. Table 5-6 lists frequencies of detection and maximum concentrations in surface water samples.

5.14 AOPC 14 – MIDDLEFIELD-ELLIS-WHISMAN GROUNDWATER EXTRACTION TREATMENT SYSTEM

Influent/Effluent

Influent and effluent results were compared to USEPA and State groundwater screening levels for evaluation purposes only. One influent and one effluent sample were collected at AOPC 14. Concentrations in both samples exceeded the groundwater RSLs for PFOS, PFOA, and PFHxS,

as well as the groundwater ESLs for PFOS and PFOA. Eleven of the 28 PFAS were detected in the samples from AOPC 14. PFAS detected and their estimated concentrations in the influent were PFOS (120 ng/L), PFOA (14 ng/L), 6:2 FTS (2.7 ng/L), PFBS (26 ng/L), PFBA (8.2 ng/L), PFHpA (5.7 ng/L), PFHpS (6.5 ng/L), PFHxA (27 ng/L), PFHxS (130 ng/L), PFPeS (21 ng/L), and PFPeA (8.8 ng/L). PFAS detected and their estimated concentrations in the effluent were PFOS (94 ng/L), PFOA (13 ng/L), PFBS (24 ng/L), PFBA (10 ng/L), PFHpA (4.5 ng/L), PFHpS (4.9 ng/L), PFHxS (100 ng/L), PFHxA (22 ng/L), PFPeS (20 ng/L), and PFPeA (9.6 ng/L). In all cases except for PFBA and PFPeA, the influent concentration was higher than the effluent concentration, but difference between those higher and lower concentrations of each analyte was negligible (less than 2 ng/L). Influent/effluent analytical results are listed in Table 5-7. The location of AOPC 14 is shown on Figure 5-17.

Surface Water

One surface water sample (SCOF-P) was collected at AOPC 14. This is the same sample collected to evaluate AOPC 13 (see previous section). PFBS was detected at estimated concentration of 1.3 ng/L, PFOA was detected at estimated concentration of 1.1 ng/L, PFHxS was detected at 5.4 ng/L, and PFOS was detected at 7.4 ng/L. HFPO-DA and PFNA were not detected in the sample. No screening levels for surface water have been established. A summary of surface water sample results is in Table 5-5 and on Figure 5-17. Table 5-6 lists frequencies of detection and maximum concentrations in surface water samples.

5.15 AOPC 15 – WEST-SIDE AQUIFERS TREATMENT SYSTEM (IR 28)

Influent and effluent results were compared to USEPA and State groundwater screening levels for evaluation purposes only. One influent and one effluent sample were collected at AOPC 15. Concentrations in the influent sample exceeded the groundwater RSLs for PFOS, PFOA, and PFHxS, as well as the groundwater ESLs for PFOS and PFOA. Twelve of the 28 PFAS were detected in the influent sample from AOPC 15. PFAS detected and their concentrations in the influent were PFOS (47 ng/L), PFOA (17 ng/L), 6:2 FTS (6.9 ng/L), 8:2 fluorotelomer sulfonate (FTS) (estimated 2 ng/L), PFBS (12 ng/L), PFBA (9.7 ng/L), PFHpA (6.4 ng/L), PFHpS (estimated 1.4 ng/L), PFHxS (48 ng/L), PFHxA (20 ng/L), PFPeS (8.3 ng/L), and PFPeA (19

ng/L). The only PFAS detected in the effluent sample was PFBA at an estimated concentration of 3.9 ng/L. Influent/effluent analytical results are listed in Table 5-7. The location of AOPC 15 is shown on Figure 5-18.

5.16 AOPC 16 – NORTH PATROL ROAD DITCH (IR 21) AND NORTHERN CHANNEL (IR 27)

Groundwater samples were collected at five locations within AOPC 16. Figure 5-10 compares PFOA, PFOS, PFNA, PFHxS, HFPO-DA, and PFBS concentrations within AOPC 16 to federal screening levels. Table 5-3 compares PFOA, PFOS, PFNA, PFHxS, HFPO-DA, and PFBS concentrations within AOPC 16 to federal and state screening levels.

Groundwater

Twenty-seven of the 28 PFAS were detected in groundwater samples from AOPC 16. PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in four samples (W2-16 at 230 ng/L, WU5-9 at 44 ng/L, WGC2-4 at 17 ng/L, and WGC2-5 at 11 ng/L). PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L and the groundwater ESL of 6.5 ng/L in three samples (W2-16 at 500 ng/L, WU5-9 at 47 ng/L, and WGC2-4 at 34 ng/L). PFHxS was detected at concentrations exceeding the groundwater RSL of 39 ng/L in two samples (W2-16 at 500 ng/L and WU5-9 at 40 ng/L). PFBS and PFNA were not detected at concentrations exceeding any screening levels. HFPO-DA was non-detect in all samples. Monitoring well analytical results are listed in Table 5-3, and Table 5-4 lists frequencies of detection and maximum concentrations in groundwater. Frequency of detection tables for each AOPC are in Appendix I.

5.17 AOPC 17 – MARRIAGE ROAD DITCH (IR 3)

Groundwater samples were collected within AOPC 17 at five locations. Figure 5-12 compares PFOA, PFOS, PFNA, PFHxS, HFPO-DA, and PFBS concentrations within AOPC 17 to federal screening levels. Table 5-3 compares PFOA, PFOS, PFNA, PFHxS, HFPO-DA, and PFBS concentrations within AOPC 17 to federal and state screening levels. The two previous surface water samples collected at AOPC 17 (discussed in Section 3.6.17) are shown on Figure 5-12 for reference.

Groundwater

Thirteen of the 28 PFAS were detected in groundwater samples from AOPC 17. PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in four samples (W3-1 at 44 ng/L, W3-20 at 160 ng/L, W3-8 at 48 ng/L, and EXW-4 at 24 ng/L). PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L and the groundwater ESL of 6.5 ng/L in four samples (W3-20 at 99 ng/L, W3-8 at 150 ng/L, W3-1 at 39 ng/L, and EXW-4 at 27 ng/L). PFHxS was detected at concentrations exceeding the groundwater RSL in four samples (W3-20 at 130 ng/L, W3-8 at 190 ng/L, W3-1 at 56 ng/L, and EXW-4 at 47 ng/L). PFNA and PFBS were not detected at concentrations exceeding any screening levels. HFPO-DA was non-detect in all samples. Monitoring well analytical results are listed in Table 5-3, and Table 5-4 lists frequencies of detection and maximum concentrations in groundwater. Frequency of detection tables for each AOPC are in Appendix I.

5.18 AOPC 18 – LINDBERGH AVENUE STORM DRAIN DITCH (AOI 6)

Groundwater samples were collected within AOPC 18 at three locations. Figure 5-13 compares PFOA, PFOS, PFNA, PFHxS, HFPO-DA, and PFBS concentrations within AOPC 18 to federal screening levels. Table 5-3 compares PFOA, PFOS, PFNA, PFHxS, HFPO-DA, and PFBS concentrations within AOPC 18 to federal and state screening levels.

Groundwater

Twelve of the 28 PFAS were detected in groundwater samples from AOPC 18. PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in two samples (11E02A at 34 ng/L and PFAS-A at 25 ng/L). PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L and the groundwater ESL of 6.5 ng/L in all three samples (11E02A at 470 ng/L, PFAS-A at 150 ng/L, and WNB-7 at 55 ng/L). PFHxS was detected at concentrations exceeding the groundwater RSL in two samples (11E02A at 120 ng/L and PFAS-A at 220 ng/L). PFBS did not exceed any screening levels, and the highest concentration detected was 22 ng/L. PFNA did not exceed any screening levels, and the highest concentration detected was an estimated 2.9 ng/L. HFPO-DA was non-detect in all samples. Monitoring well analytical results are listed in Table 5-3, and Table 5-4 lists frequencies of

detection and maximum concentrations in groundwater. Frequency of detection tables for each AOPC are in Appendix I.

5.19 AOPC 19 – STORMWATER RETENTION POND (WITHIN IR 25)

One surface water sample (SWRP-P) was collected at AOPC 19; however, it contained low extracted internal standard recoveries (<20%), affecting most analytes in the sample. The data were flagged with the X and UX qualifiers (see Appendix H). The "X" qualifier in the DoD program indicates that the data point should be excluded, so results from this sample were excluded from data evaluation.

5.20 AOPC 20 – BUILDING N271 INDUSTRIAL WASTEWATER PRETREATMENT PLANT

Effluent results were compared to USEPA and State groundwater screening levels for evaluation purposes only. One effluent sample was collected at AOPC 20. Concentrations in the sample exceeded the groundwater RSLs for PFOS, PFOA, and PFHxS, and the groundwater ESLs for PFOS and PFOA. Eleven of the 28 PFAS were detected in the sample from AOPC 20. PFAS detected and their concentrations in the effluent were PFOS (210 ng/L), PFOA (36 ng/L), 6:2 FTS (estimated 5.3 ng/L), PFBS (60 ng/L), PFBA (25 ng/L), PFHpA (11 ng/L), PFHpS (12 ng/L), PFHxS (230 ng/L), PFHxA (58 ng/L), PFPeS (50 ng/L), and PFPeA (23 ng/L). Effluent analytical results are listed in Table 5-7. The location of AOPC 20 is shown on Figure 5-17

5.21 AOPC 21 – FORMER INDUSTRIAL WASTEWATER SURFACE IMPOUNDMENTS (IR 4)

Groundwater samples were collected within AOPC 21 at eight locations. Figure 5-12 compares PFOA, PFOS, PFNA, PFHxS, HFPO-DA, and PFBS concentrations within AOPC 21 to federal screening levels. Table 5-3 compares PFOA, PFOS, PFNA, PFHxS, HFPO-DA, and PFBS concentrations within AOPC 21 to federal and state screening levels.

Groundwater

Fourteen of the 28 PFAS were detected in groundwater samples from AOPC 21. PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in seven samples (EXW-4 at 24 ng/L, W4-14 at 60 ng/L, W4-6 at 12 ng/L, W6-5 at

27 ng/L, W6-6 at 31 ng/L, WSW-5 at 27 ng/L, and WU5-10 at 8.4 ng/L). PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L and the groundwater ESL of 6.5 ng/L in five samples (W4-14 at 70 ng/L, W6-5 at 52 ng/L, W6-6 at 81 ng/L, EXW-4 at 27 ng/L, and WSW-5 at 99 ng/L). PFOS concentration in W4-6 (6.4 ng/L) exceeded the groundwater RSL. PFHxS was detected at concentrations exceeding the groundwater RSL of 39 ng/L in five samples (EXW-4 at 47 ng/L, W4-14 at 67 ng/L, W6-5 at 77 ng/L, W6-6 at 73 ng/L, and WSW-5 at 83 ng/L). PFNA and PFBS were not detected at concentrations exceeding any screening levels. HFPO-DA was non-detect in all samples. Monitoring well analytical results are listed in Table 5-3, and Table 5-4 lists frequencies of detection and maximum concentrations in groundwater. Frequency of detection tables for each AOPC are in Appendix I.

5.22 AOPC 22 – BUILDING N249 OUTDOOR AERODYNAMIC RESEARCH FACILITY

Groundwater samples were collected within AOPC 22 at two locations. Figure 5-13 compares PFOA, PFOS, PFNA, PFHxS, HFPO-DA, and PFBS concentrations within AOPC 22 to federal screening levels. Table 5-3 compares PFOA, PFOS, PFNA, PFHxS, HFPO-DA, and PFBS concentrations within AOPC 22 to federal and state screening levels.

Groundwater

Seven of the 28 PFAS were detected in groundwater samples from AOPC 22. PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng /L and the groundwater ESL of 6.5 ng/L in three samples (10J01A at 15 ng/L, 10J02A at an estimated 15 ng/L, and 10J02A-FD at an estimated 22 ng/L). PFHxS was detected at concentrations exceeding the groundwater RSL of 39 ng/L in one sample (10J01A at 56 ng/L, but equal to the RSL in 10J01A-FD). PFOA, PFNA, PFBS, and HFPO-DA were not detected at concentrations exceeding any screening levels. Monitoring well analytical results are listed in Table 5-3, and Table 5-4 lists frequencies of detection and maximum concentrations in groundwater. Frequency of detection tables for each AOPC are in Appendix I.

5.23 AOPC 23 – HANGAR 4 (CANG) BUILDING 662

Previous sampling efforts already identified the presence of PFAS at AOPC 23 prior to this SI. However, during the SI, one groundwater sample was collected from a new well, PFAS-C, which is near a well previously sampled for AOPC 23. The location and sampling results for PFAS-C is shown on Figure 5-5. Figures 5-3 and 5-16 show soil and groundwater samples collected at AOPC 23 during previous sampling events, respectively. Table 5-3 compares PFOA, PFOS, PFNA, PFHxS, HFPO-DA, and PFBS concentrations for well PFAS-C to federal and state screening levels.

Groundwater

Ten of the 28 PFAS were detected in the groundwater sample from PFAS-C. PFOS was detected at concentration exceeding the groundwater RSL of 4 ng /L and the groundwater ESL of 6.5 ng/L in the sample (PFAS-C, 35 ng/L). PFOA, PFHxS, and PFBS were not detected at concentrations exceeding any screening levels. HFPO-DA and PFNA were non-detect in all samples.

Groundwater sampling results from previous investigations by the RPS Group and AECOM in 2018-2019 are shown on Figure 5-16. Groundwater, soil, and sediment sample results from those sampling events are discussed in detail in Section 3.6.23.

5.24 AOPC 24 – MIDDLEFIELD-ELLIS-WHISMAN PLUME

Groundwater samples were collected within AOPC 24 at four locations. Figure 5-14 compares PFOA, PFOS, PFNA, PFHxS, HFPO-DA, and PFBS concentrations within AOPC 24 to federal screening levels. Table 5-3 compares PFOA, PFOS, PFNA, PFHxS, HFPO-DA, and PFBS concentrations within AOPC 24 to federal and state screening levels.

Groundwater

Eleven of the 28 PFAS were detected in groundwater samples from AOPC 24. PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in one sample (W89-1 at 11 ng/L). PFOS was detected at concentrations exceeding

the groundwater RSL of 4 ng/L in three samples (171A at 4.2 ng/L, WU4-1 at 8 ng/L, and W89-1 at 57 ng/L). PFOS concentrations in WU4-1 and W89-1 also exceeded the groundwater ESL of 6.5 ng/L. PFHxS was detected in W89-1 at concentration of 130 ng/L, which exceeded the groundwater RSL of 39 ng/L. PFBS was not detected at concentrations exceeding any screening levels, and the highest concentration detected was 40 ng/L. PFNA and HFPO-DA were non-detect in all samples. Monitoring well analytical results are listed in Table 5-3, and Table 5-4 lists frequencies of detection and maximum concentrations in groundwater. Frequency of detection tables for each AOPC are in Appendix I.

5.25 AOPC 25 – ORION PARK PLUME

Groundwater samples were collected at two locations at AOPC 25. Figure 5-15 compares PFOA, PFOS, PFNA, PFHxS, HFPO-DA, and PFBS concentrations within AOPC 25 to federal screening levels. Table 5-3 compares PFOA, PFOS, PFNA, PFHxS, HFPO-DA, and PFBS concentrations within AOPC 25 to federal and state screening levels.

Groundwater

Ten of the 28 PFAS were detected in groundwater samples from AOPC 25. PFOS was detected at concentrations exceeding the groundwater ESL of 6.5 ng/L in one sample (15H12A at 9 ng/L) and exceeding the groundwater RSL of 4 ng/L in two samples (15H12A at 9 ng/L and 15B10A at 4.3 ng/L). PFOA, PFHxS, and PFBS were not detected at concentrations exceeding any screening levels. HFPO-DA and PFNA were non-detect in all samples. Monitoring well analytical results are listed in Table 5-3, and Table 5-4 lists frequencies of detection and maximum concentrations in groundwater. Frequency of detection tables for each AOPC are in Appendix I.

5.26 AOPC 26 – EASTERN BOUNDARY (IR 5)

Water level measurements at wells PFAS- C through PFAS- G suggest that groundwater in the unconfined aquifer south of PFAS-C flows northward. Water level measurements suggest presence of a groundwater divide with some groundwater from Lockheed Martin’s property flowing toward the eastern boundary of NASA at well W5-3.

Well W5-3 is in the shallow unconfined aquifer and within Site 5, a former petroleum-product fuel farm that hosted 15 USTs, six ASTs, and an oil-water separator (Tetra Tech 1994). PFAS products potentially are present at Site 5 because of the following possible circumstances typical of bulk fuel tank operations: AFFF discharges during training or fire-fighting events, PFAS in floating layers on top of oil product where these layers were used to reduce evaporation loss, or PFAS in fuel system seals, hoses, and O-rings, or in hydraulic oils used to prevent evaporation, fires, and corrosion (CSWRCB 2021).

Site 5 soil and groundwater had been contaminated by releases of JP-5 Jet fuel during operation of fuel storage tanks. Corrective actions occurred at Site 5 to clean up soils and groundwater from the releases of petroleum hydrocarbons, with partial completion of corrective actions related to petroleum fuel and fuel constituents by December 2011 (Regional Water Board 2011).

Groundwater samples were collected along the ARC eastern property boundary beside AOPC 26 at Well W5-3. Figure 5-5 compares PFOA, PFOS, PFNA, PFHxS, HFPO-DA, and PFBS concentrations in Well W5-3 to federal screening levels. Table 5-3 compares PFOA, PFOS, PFNA, PFHxS, HFPO-DA, and PFBS concentrations in Well W5-3 to federal and state screening levels.

Groundwater

Fifteen of the 28 PFAS were detected in groundwater samples from W5-3 located along the ARC eastern property boundary. PFOA was detected at concentration exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in W5-3 at 350 ng/L. PFOS was detected at concentration exceeding the groundwater RSL of 4 ng/L and the groundwater ESL of 6.5 ng/L in W5-3 at 490 ng/L. Concentrations of PFNA and PFHxS (16 and 350 ng/L, respectively) exceeded the groundwater ESLs of 5.9 ng/L and 39 ng/L. The detected concentration of PFBS at 43 ng/L did not exceed any screening levels, and HFPO-DA was not detected in the sample. Monitoring well analytical results are listed in Table 5-3, and Table 5-4 lists frequencies of detection and maximum concentrations in groundwater. Frequency of detection tables for each AOPC are in Appendix I.

5.27 FIELD QA/QC SAMPLES

Field QC samples were collected to ensure that collected samples were representative of the sample source. Table 5-8 indicates that 16 field blanks, four equipment rinsate blanks, and one source water sample were collected during the field event. There were no PFAS detections in the field blanks or source water samples. One equipment rinsate blank originally came back with PFAS compound detections but did not pass data validation. After re-preparing and re-analyzing the sample, the lab report came back with no PFAS detections. Therefore, results from the first analysis were not used for blank action assessment.

Results from these field QA/QC samples do not indicate any non-conformance issues or discrepancies with collection of groundwater or soil samples, and do not impact usability of the data for this project.

Highlighted cell indicates result is greater than screening criteria

"--" = No criteria available

bgs = Below ground surface

Eco = Ecological

EPA = Environmental Protection Agency

ESL = Environmental Screening Level

HH = Human Health

µg/kg = micrograms per kilogram

PFAS = per- and polyfluoroalkyl substances

RSL = Regional Screening Level (note the EPA RSL tables are listed in mg/kg. The RSL values were converted to µg/kg in this table for comparison purposes) U = Not detected at or above the Limit of Qualitation (LOQ)

J = Estimated result < LOQ and > Detection Limit (DL)

[1] HH and Eco ESLs taken from California Water Board

TABLE 5-2: PFAS Soil Frequencies of Detection (continued)
PFAS Site Inspection for the Ames Research Center

Notes:

1 Values calculated using non-detects at 1/2 the limit of detection
2 Screening values are USEPA RSLs (May 2022) (HQ = 0.1), which includes the 6 PFAS compounds referenced in the table.
3 HH ESL = Residential cancer risk ESLs for direct exposure, human health risk in soil (Regional Water Board 2020).
4 Eco ESL = No observed adverse effects levels (NOAEL) in significantly vegetated area ESLs for terrestrial habitat in soils (Regional Water Board 2020)

Highlighted cell indicates concentration is greater than screening criteria.
"--" = No criteria available.
EPA = Environmental Protection Agency.
ESL = Environmental Screening Level
J = Estimated result < LOQ and > Detection Limit (DL)
J+ = Biased high estimated result
J- = Biased low estimated result
ng/L = nanogram per liter.
PFAS = per- and polyfluoroalkyl substances
RSL = Regional Screening Level.
U = Not detected at or above the Limit of Qualitation (LOQ)

TABLE 5-4: PFAS Groundwater Frequencies of Detection (continued)

PFAS Site Inspection for the Ames Research Center

Notes:

1 Values calculated using non-detects at 1/2 the limit of detection

2 Screening values are USEPA RSLs (May 2022) (HQ = 0.1), which includes the 6 PFAS compounds referenced in the table.

3 GW ESL = Maximum Contaminant Level (MCL), Priority Environmental Screening Levels (ESL) for direct exposure human health risk in water (Regional Water Board 2020).

--	not available
AOPC	Area of Potential Concern
EPA	U.S. Environmental Protection Agency
ESL	Environmental Screening Levels
GW	Groundwater
J	Estimated value
ND	Non-detect
ng/L	Nanograms per liter
PFAS	per- and polyfluoroalkyl substances
RSL	Regional Screening Level

Highlighted cell indicates concentration is greater than screening criteria.

1 Data validation for sample ERB-02-072921 identified laboratory contamination issues during blank preparation or analysis. The sample was re-extracted and did not contain any contamination. Therefore, the original dataset shown on this table for this sample was not used for blank action assessment.

SECTION 6
CONCLUSIONS AND RECOMMENDATIONS

During the SI, each identified potential source area was inspected for presence of PFAS as specified in the SIWP. PFAS concentrations in sampled media were compared to screening levels, as applicable, to determine whether further investigation would be warranted. PFAS concentrations exceeding screening levels were detected in samples at all AOPCs sampled for soil or groundwater or both. Conclusions and recommendations for each medium and AOPC are below and summarized in Table 6-1.

Conclusions that follow compare detected concentrations of PFAS to State of California ESLs and USEPA RSLs. Figure 5-1 through Figure 5-18 compare detected concentrations of PFAS to USEPA RSLs only, as applicable, for soil and groundwater (USEPA screening levels have not been established for surface water).

Recommendations that follow are based on the conclusions, and the following potential steps for each AOPC:

1. **PRP Analysis**. Multiple parties may be associated with the PFAS levels found at each AOPC. A PRP analysis would help determine responsibility and allocation of future costs of investigation based on past history and information presented in this SI report. PRP analysis should be done in accordance with *NASA Procedures Requirements 8590.A*, *Environmental Compliance and Restoration Program,* Section 4.3.1.f. though Section 4.3.1.i. The process that must be followed for this PRP analysis is described in "*The Guidance for Implementation of Environmental Compliance and Restoration Program Requirements Defined in NASA Procedural Requirements 8590.1A*." Appendix D of this guidance includes a PRP Analysis Checklist that should be used in these efforts.

2. **Further Investigation:** Based on the technical conclusions in this SI, general technical recommendations for further investigation are offered in the following sections for each AOPC.

6.1 AOPC 1 – FORMER FIREFIGHTING TRAINING AREA (IR 10, 12, 20)

Conclusions

Soil samples were collected at four locations, with a surface (0 to 0.5 feet bgs) and subsurface (0.5 to 2 feet bgs) soil sample collected at each location, for a total of eight soil samples. Seventeen of the 28 PFAS were detected in soil samples from AOPC 1. PFOS was detected at concentrations exceeding the soil RSL of 13 µg/kg in five samples and above the human health and ecologic ESLs of 12 and 13 µg/kg, respectively, in five samples. PFOA was detected at concentrations exceeding the human health ESL of 3.8 µg/kg in five samples. PFOA concentration exceeded the ecologic ESL of 84 µg/kg in one sample. PFOA concentrations exceeded the soil RSL of 19 µg/kg in three samples. PFNA, PFHxS, HFPO-DA, and PFBS concentrations did not exceed RSLs.

Groundwater samples were collected at seven existing monitoring well locations during the SI. Seventeen of the 28 PFAS were detected in groundwater samples from AOPC 1. PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in six samples. PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L and the groundwater ESL of 6.5 ng/L in seven samples. PFHxS was detected at concentrations exceeding the groundwater RSL of 39 ng/L in six samples. PFNA was detected at concentration exceeding the groundwater RSL of 5.9 ng/L in one sample. There were no PFBS screening level exceedances, and the highest concentration detected was 520 ng/L. HFPO-DA was non-detect in all samples.

Prior to the SI, some groundwater samples were collected at AOPC 1. During the September 2019 sampling event, groundwater samples were collected at two locations at AOPC 1. Sixteen of the 24 PFAS analytes were detected in the samples collected during this event. PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in both samples. PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L and the groundwater ESL of 6.5 ng/L in both samples. PFHxS was detected at concentrations exceeding the groundwater RSL of 39 ng/L in both samples. PFNA was detected at concentration exceeding the groundwater RSL of 5.9 ng/L in one sample. PFBS was detected at concentration exceeding the groundwater RSL of 600 ng/L in one sample.

Recommendations

- PRP Analysis: Preliminary information indicates that NASA, the Navy, and CANG are all possible contributors to PFAS releases at AOPC 1.

- Further Investigation: Further investigation of the horizontal and vertical extents of PFAS in groundwater and soil is recommended.

6.2 AOPC 2 – CRASH SITE (SUNNYVALE GOLF COURSE)

Conclusions

Soil samples were collected at seven locations, with a surface (0 to 0.5 feet bgs) and subsurface (0.5 to 2 feet bgs) soil sample collected at each location, for a total of 14 soil samples. Thirteen of the 28 PFAS were detected in soil samples from AOPC 2. PFOS was detected at concentrations exceeding the RSL, human health, and ecologic ESLs in four samples. PFOA was detected at concentrations exceeding the human health ESL of 3.8 µg/kg in four samples. PFBS, PFHxS, and PFNA were not detected above screening criteria. HFPO-DA was non-detect in all samples.

Groundwater samples were collected at five locations. Eleven of the 28 PFAS were detected in groundwater samples from AOPC 2. PFOS was detected at concentrations exceeding the groundwater ESL of 6.5 ng/L and the groundwater RSL of 4 ng/L in three samples. Concentrations of PFOA, PFBS, PFNA, and PFHxS did not exceed screening values. HFPO-DA was non-detect in all samples.

Recommendations

- PRP Analysis: Preliminary information indicates that the Navy is the possible contributor to PFAS releases at AOPC 2.

- Further Investigation: Further investigation of the horizontal and vertical extents of PFAS in groundwater and soil is recommended.

6.3 AOPC 3 – HANGARS 2 AND 3 (IR 7)

Conclusions

Groundwater samples were collected at seven locations within AOPC 3. Nineteen of the 28 PFAS were detected in groundwater samples from AOPC 3. PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in six samples. PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L and the groundwater ESL in seven samples. PFNA was detected at concentration exceeding the groundwater RSL of 5.9 ng/L in one sample. HFPO-DA was detected at concentration exceeding the groundwater RSL of 6 ng/L in one sample. PFHxS was detected at concentration exceeding the groundwater RSL of 39 ng/L in five samples. PFBS was not detected above the screening level in any sample.

Recommendations

- PRP Analysis: Preliminary information indicates that the Navy and CANG are possible contributors to PFAS releases at AOPC 3.
- Further Investigation: Further investigation of horizontal and vertical extents of PFAS in groundwater is recommended.

6.4 AOPC 4 – FORMER ENGINE TEST STAND AREA (IR 11)

Conclusions

Groundwater samples were collected at AOPC 4 at two locations. Nine of the 28 PFAS were detected in groundwater samples from AOPC 4. PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and groundwater ESL of 5.1 ng/L in both samples. There were no screening level exceedances for PFBS, PFHxS, or PFOS. PFNA and HFPO-DA were non-detect in all samples.

Recommendations

- PRP Analysis: Preliminary information indicates that the Navy is the possible contributor to PFAS releases at AOPC 4.

- Further Investigation: Further investigation of horizontal and vertical extents of PFAS in groundwater is recommended.

6.5 AOPC 5 – HANGAR N211 (WITHIN AOI 3, FORMERLY AOI 12)

Conclusions

Groundwater samples were collected at six locations within AOPC 5. Nineteen of the 28 PFAS were detected in groundwater samples from AOPC 5. PFBS was detected in one sample at concentration exceeding the groundwater RSL of 600 ng/L. PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in seven samples. PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L and the groundwater ESL of 6.5 ng/L in seven samples. PFHxS was detected at concentrations exceeding the groundwater RSL of 39 ng/L in five samples. PFNA was detected at concentrations exceeding the groundwater RSL of 5.9 ng/L in five samples. HFPO-DA was non-detect in all samples.

Recommendations

- PRP Analysis: Preliminary information indicates that NASA is the possible contributor to PFAS releases at AOPC 5.

- Further Investigation: Further investigation of horizontal and vertical extents of PFAS in groundwater is recommended.

6.6 AOPC 6 – HANGAR N248 (AOI 3 EAST)

Conclusions

Soil samples were collected at one location, which included a surface (0 to 0.5 feet bgs) and subsurface (0.5 to 2 feet bgs) soil samples, for a total of two samples. Twenty-one of the 28 PFAS were detected in soil samples from AOPC 6. PFOS was detected at concentrations exceeding the RSL of 13 µg/kg and the human health and ecologic ESLs of 12 and 13 µg/kg, respectively, in both samples. PFOA was detected at concentration exceeding the human health

ESL of 3.8 µg/kg in one sample. PFBS, PFNA, and PFHxS concentrations did not exceed screening levels. HFPO-DA was non-detect in all samples.

Groundwater samples were collected at three locations within AOPC 6. Thirteen of the 28 PFAS were detected in groundwater samples from AOPC 6. PFBS was detected at concentration exceeding the groundwater RSL of 600 ng/L in one sample. PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in all three samples. PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L and the groundwater ESL of 6.5 ng/L in all three samples. PFHxS concentrations exceeded the groundwater RSL of 39 ng/L in three samples, and PFNA concentration exceeded the groundwater RSL of 5.9 ng/L in one sample. HFPO-DA was non-detect in all samples.

Recommendations

- PRP Analysis: Preliminary information indicates that NASA is the possible contributor to PFAS releases at AOPC 6.
- Further Investigation: Further investigation of the horizontal and vertical extents of PFAS in groundwater and soil is recommended.

6.7 AOPC 7 – FIRE DEPARTMENT (BUILDING 580)

Conclusions

Soil samples were collected at AOPC 7 at two locations, each of which included a surface (0 to 0.5 feet bgs) and subsurface (0.5 to 2 feet bgs) soil sample, for a total of four soil samples. Eighteen of the 28 PFAS were detected in soil samples from AOPC 7. PFOS was detected at concentrations exceeding the soil RSL of 13 µg/kg and the human health and ecologic ESLs of 12 and 13 µg/kg, respectively, in all four samples. PFOA was detected at a concentration exceeding the human health ESL of 3.8 µg/kg in one sample. PFHxS, PFNA, and PFBS concentrations did not exceed screening levels. HFPO-DA was non-detect in all samples.

Groundwater samples were collected at five locations within AOPC 7. Seventeen of the 28 PFAS were detected in groundwater samples from AOPC 7. PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in four samples.

PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L and the groundwater ESL of 6.5 ng/L in five samples. PFHxS exceeded the groundwater RSL of 39 ng/L in four samples, and PFNA exceeded the groundwater RSL of 5.9 ng/L in one sample. PFBS concentrations did not exceed any screening levels. HFPO-DA was non-detect in all samples.

Recommendations

- PRP Analysis: Preliminary information indicates that NASA, the Navy, and CANG are all possible contributors to PFAS releases at AOPC 7.

- Further Investigation: Further investigation of the horizontal and vertical extents of PFAS in groundwater and soil is recommended. For the purposes of further investigation, AOPC 7 will be subsumed into AOPC 1 as the PFAS and potential source of PFAS are the same or similar, and AOPC 7 is within AOPC 1.

6.8 AOPC 8 – SITE 1 RUNWAY LANDFILL (IR 1)

Conclusions

Groundwater samples were collected at five locations within AOPC 8. Ten of the 28 PFAS were detected in groundwater samples from AOPC 8. PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in two samples. PFOS, PFBS, and PFHxS concentrations did not exceed any screening levels. PFNA and HFPO-DA were non-detect in all samples.

Recommendations

- PRP Analysis: Preliminary information indicates that the Navy is the possible contributor to PFAS releases at AOPC 8.

- Further Investigation: Further investigation of horizontal and vertical extents of PFAS in groundwater is recommended.

6.9 AOPC 9 – SITE 2 FORMER GOLF COURSE LANDFILL (IR 2)

Conclusions

Groundwater samples were collected at three locations within AOPC 9. Thirteen of the 28 PFAS were detected in groundwater samples from AOPC 9. PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in three samples. PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L and the groundwater ESL of 6.5 ng/L in three samples. PFHxS was detected at concentrations exceeding the groundwater RSL of 39 ng/L in three samples. PFBS and PFNA concentrations did not exceed any screening levels. HFPO-DA was non-detect in all samples.

Recommendations

- PRP Analysis: Preliminary information indicates that the Navy is the possible contributor to PFAS releases at AOPC 9.
- Further Investigation: Further investigation of the horizontal and vertical extents of PFAS in groundwater is recommended.

6.10 AOPC 10 – SITE 22 LANDFILL (IR 22)

Conclusions

Groundwater samples were collected at nine locations within AOPC 10. Thirteen of the 28 PFAS were detected in groundwater samples from AOPC 10. PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in five samples. PFOS was detected at a concentration exceeding the groundwater RSL of 4 ng/L and the groundwater ESL of 6.5 ng/L in five samples. PFHxS was detected at concentration exceeding the groundwater RSL of 39 ng/L in one sample. PFBS and PFNA concentrations did not exceed any screening levels. HFPO-DA was non-detect in all samples.

Recommendations

- PRP Analysis: Preliminary information indicates that the Navy is the possible contributor to PFAS releases at AOPC 10.

- Further Investigation: Further investigation of the horizontal and vertical extents of PFAS in groundwater is recommended.

6.11 AOPC 11 – BUILDING 191 PUMP STATION

Conclusions

One surface water sample was collected at AOPC 11. PFNA was detected at concentration of 13 ng/L, PFHxS was detected at 930 ng/L, PFBS was detected at 130 ng/L, PFOA was detected at 340 ng/L, and PFOS was detected at 1,400 ng/L. HFPO-DA was not detected in the sample. No screening levels for surface water have been established.

Recommendations

- PRP Analysis: Preliminary information indicates that NASA, the Navy, and CANG are all possible contributors to PFAS releases at AOPC 11.

- Further Investigation: Further investigation of the presence of PFAS in surface water is recommended, including the possibility of a pathway between AOPC 11 (Building 191 Pump Station), AOPC 16 (North Patrol Road Ditch and Northern Channel), and AOPC 17 (Marriage Road Ditch).

6.12 AOPC 12 - STORMWATER SETTLING BASIN/EASTERN DIKED MARSH (WITHIN IR 25)

Conclusions

One surface water sample was collected at AOPC 12. PFBS was detected at concentration of 4 ng/L, PFOA was detected at estimated concentration of 1.1 ng/L, PFHxS was detected at 6 ng/L, and PFOS was detected at 5.5 ng/L. HFPO-DA and PFNA were not detected in the sample. No screening levels for surface water have been established.

Recommendations

- PRP Analysis: Preliminary information indicates that NASA and the Navy are possible contributors to PFAS releases at AOPC 12.

- Further Investigation: Further investigation of the sources and extent of PFAS in surface water in AOPC 12 is recommended.

6.13 AOPC 13 – NASA GROUNDWATER EXTRACTION TREATMENT SYSTEM

Conclusions

One influent and one effluent sample were collected at AOPC 13. Eleven of the 28 PFAS were detected in the samples from AOPC 13. These results were compared to USEPA and State groundwater screening levels for evaluation purposes only. Concentrations in the influent sample exceeded the groundwater RSLs for PFOS, PFHxS, and PFOA, as well as the groundwater ESLs for PFOS and PFOA. Concentrations of PFOS in the effluent sample exceeded the groundwater RSL of 4 ng/L; however, the concentration in the duplicate sample was under the RSL. At ARC, treated water from NASA GWETS (AOPC 13) and MEW GWETS (AOPC 14) either discharges to Stevens Creek or is treated via RO at the Building N271 IWPP (AOPC 20), and then is used for the ARC Jet Complex before discharge into the Palo Alto Sanitary Sewer.

One surface water sample was collected at AOPC 13. This is the same sample collected to evaluate AOPC 14 (see next section). PFBS was detected at estimated concentration of 1.3 ng/L, PFOA was detected at estimated concentration of 1.1 ng/L, PFHxS was detected at 5.4 ng/L, and PFOS was detected at 7.4 ng/L. HFPO-DA and PFNA were not detected in the sample. No screening levels for surface water have been established.

Recommendations

- PRP Analysis: Preliminary information indicates that NASA, the Navy, and MEW PRPs are all possible contributors to PFAS releases at AOPC 13.

- Further Investigation: Further investigation of the extents of PFAS in surface water at AOPC 13 is recommended, along with routine quarterly monitoring of the influent and effluent and taking additional steps as needed based on results.

6.14 AOPC 14 – MIDDLEFIELD-ELLIS-WHISMAN GROUNDWATER EXTRACTION TREATMENT SYSTEM

Conclusions

One influent and one effluent sample were collected at AOPC 14. Influent and effluent results were compared to USEPA and State groundwater screening levels for evaluation purposes only. PFOS, PFOA, and PFHxS concentrations in both samples exceeded the groundwater RSLs. Concentrations of PFOS and PFOA in both samples also exceeded the groundwater ESLs. Eleven of the 28 PFAS were detected in the samples from AOPC 14. In all cases except for PFBA and PFPeA, the influent concentration was higher than the effluent concentration, and those respective sets of concentrations of the two analytes differed negligibly (less than two ng/L). At ARC, treated water from MEW GWETS (AOPC 14) either discharges to Stevens Creek or is treated via RO at the Building N271 IWPP (AOPC 20), and then is used for the ARC Jet Complex before discharge into the Palo Alto Sanitary Sewer.

One surface water sample was collected at AOPC 14 (same sample as AOPC 13). PFBS was detected at estimated concentration of 1.3 ng/L, PFOA was detected at estimated concentration of 1.1 ng/L, PFHxS was detected at 5.4 ng/L, and PFOS was detected at 7.4 ng/L. HFPO-DA and PFNA were not detected in the sample. No screening levels for surface water have been established.

Recommendations

- PRP Analysis: Preliminary information indicates that NASA, the Navy, and MEW PRPs are the possible contributors to PFAS releases at AOPC 14.

- Further Investigation: Further investigation of discharges from the MEW GWETS into Stevens Creek is recommended (no PFAS has been detected in effluent from NASA's GWETS). Routine quarterly monitoring of the influent and effluent is also recommended, and additional steps should be taken based on results. The MEW GWETS should be updated to reduce concentrations of PFAS to below appropriate discharge concentrations in Stevens Creek.

6.15 AOPC 15 – WEST-SIDE AQUIFERS TREATMENT SYSTEM (IR 28)

Conclusions

One influent and one effluent sample were collected at AOPC 15. Influent and effluent results were compared to USEPA and State groundwater screening levels for evaluation purposes only. PFOS, PFOA, and PFHxS concentrations in the influent sample exceeded the groundwater RSLs. Concentrations of PFOS and PFOA in the influent sample also exceeded the groundwater ESLs. Twelve of the 28 PFAS were detected in the influent sample from AOPC 15. The only PFAS detected in the effluent sample was PFBA at an estimated concentration of 3.9 ng/L.

Recommendations

- PRP Analysis: Preliminary information indicates that NASA, the Navy, and MEW PRPs are all possible contributors to PFAS releases at AOPC 15.
- Further Investigation: Routine quarterly monitoring of the influent and effluent is recommended, and additional steps should be taken as needed based on results.

6.16 AOPC 16 – NORTH PATROL ROAD DITCH (IR 21) AND NORTHERN CHANNEL (IR 27)

Conclusions

Five groundwater samples were collected at AOPC 16. All of the 28 PFAS were detected in groundwater samples from AOPC 16. PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in four samples. PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L and the groundwater ESL of 6.5 ng/L in three samples. PFHxS was detected at concentrations exceeding the groundwater RSL of 39 ng/L in two samples. PFBS and PFNA were not detected at any concentrations exceeding any screening levels. HFPO-DA was non-detect in all samples.

Recommendations

- PRP Analysis: Preliminary information indicates that NASA, the Navy, and CANG are all possible contributors to PFAS releases at AOPC 16.

- Further Investigation: Further investigation of the horizontal and vertical extents of PFAS in groundwater is recommended. The pathway of PFAS in surface water between AOPC 11 (Building 191 Pump Station), AOPC 16 (North Patrol Road Ditch and Northern Channel), and AOPC 17 (Marriage Road Ditch) should also be investigated.

6.17 AOPC 17 – MARRIAGE ROAD DITCH (IR 3)

Conclusions

Groundwater samples were collected at five locations within AOPC 17. Thirteen of the 28 PFAS were detected in groundwater samples from AOPC 17. PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in four samples. PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L and the groundwater ESL of 6.5 ng/L in four samples. PFHxS was detected at concentrations exceeding the groundwater RSL in four samples. PFNA and PFBS were not detected at concentrations exceeding any screening levels. HFPO-DA was non-detect in all samples.

Recommendations

- PRP Analysis: Preliminary information indicates that NASA, the Navy, and CANG are all possible contributors to PFAS releases at AOPC 17.

- Further Investigation: Further investigation of the horizontal and vertical extents of PFAS in groundwater is recommended. The pathway of PFAS in surface water between AOPC 11 (Building 191 Pump Station), AOPC 16 (North Patrol Road Ditch and Northern Channel), and AOPC 17 (Marriage Road Ditch) should also be investigated.

6.18 AOPC 18 – LINDBERGH AVENUE STORM DRAIN DITCH (AOI 6)

Conclusions

Groundwater samples were collected at three locations within AOPC 18. Twelve of the 28 PFAS were detected in groundwater samples from AOPC 18. PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in two samples. PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L and the

groundwater ESL of 6.5 ng/L in all three samples. PFHxS was detected at concentrations exceeding the groundwater RSL in two samples. PFBS and PFNA did not exceed any screening levels. HFPO-DA was non-detect in all samples.

Recommendations

- PRP Analysis: Preliminary information indicates that the Navy and NASA are both possible contributors to PFAS releases at AOPC 18.
- Further Investigation: Further investigation of the horizontal and vertical extents of PFAS in groundwater is recommended.

6.19 AOPC 19 – STORMWATER RETENTION PONDS (WITHIN IR 25)

Conclusions

One surface water sample was collected at AOPC 19; however, the data were flagged with the X and UX qualifiers (see Appendix H). The "X" qualifier in the DoD program indicates that the data point should be excluded, so results from this sample were excluded from data evaluation.

Recommendations

- PRP Analysis: Preliminary information indicates that the Navy and NASA would be possible contributors to PFAS releases at AOPC 19.
- Further Investigation: Re-sampling of surface water is recommended for AOPC 19, along with sediment sampling.

6.20 AOPC 20 – BUILDING N271 INDUSTRIAL WASTEWATER PRETREATMENT PLANT

Conclusions

One effluent sample was collected at AOPC 20. Effluent results were compared to USEPA and State groundwater screening levels for evaluation purposes only. PFOS, PFOA, and PFHxS concentrations in the sample exceeded the groundwater RSLs. Concentrations of PFOS and PFOA exceeded groundwater ESLs. There were no PFBS screening level exceedances, and

PFNA and HFPO-DA were both non-detect. Eleven of the 28 PFAS were detected in the sample from AOPC 20. At ARC, water from NASA GWETS (AOPC 13) and MEW GWETS (AOPC 14) is treated via RO at the Building N271 IWPP (AOPC 20), and then is used for the ARC Jet Complex before discharge into the Palo Alto Sanitary Sewer.

Recommendations

- PRP Analysis: Preliminary information indicates that NASA and the MEW PRPs would be both possible contributors to PFAS releases at AOPC 20.

- Further Investigation: Routine quarterly monitoring of the treated water effluent is recommended, and additional steps should be taken as needed based on results.

6.21 AOPC 21 – FORMER INDUSTRIAL WASTEWATER SURFACE IMPOUNDMENT (IR 4)

Conclusions

Groundwater samples were collected at eight locations within AOPC 21. Fourteen of the 28 PFAS were detected in groundwater samples from AOPC 21. PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in seven samples. PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L and the groundwater ESL of 6.5 ng/L in five samples. In one additional sample, only the PFOS groundwater RSL of 4 ng/L was exceeded. PFHxS was detected at concentrations exceeding the groundwater RSL of 39 ng/L in five samples. PFNA, PFBS, and HFPO-DA were not detected at concentrations exceeding any screening levels.

Recommendations

- PRP Analysis: Preliminary information indicates that the Navy is the possible contributor to PFAS releases at AOPC 21.

- Further Investigation: Further investigation of the horizontal and vertical extents of PFAS in groundwater is recommended.

6.22 AOPC 22 – BUILDING N249 OUTDOOR AERODYNAMIC RESEARCH FACILITY

Conclusions

Groundwater samples were collected at two locations within AOPC 22. Seven of the 28 PFAS were detected in groundwater samples from AOPC 22. PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L and the groundwater ESL of 6.5 ng/L in three samples. PFHxS was detected at concentrations exceeding the groundwater RSL of 39 ng/L in one sample. PFOA, PFNA, PFBS, and HFPO-DA were not detected at concentrations exceeding any screening levels.

Recommendations

- PRP Analysis: Preliminary information indicates that NASA is the possible contributor to PFAS releases at AOPC 22.
- Further Investigation: Further investigation of the horizontal and vertical extents of PFAS in groundwater is recommended.

6.23 AOPC 23 – HANGAR 4 (CANG) BUILDING 662

Conclusions

Previous sampling efforts already identified the presence of PFAS at AOPC 23 prior to this SI. However, during the SI, one groundwater sample was collected from a new well, PFAS-C, which is near a well previously sampled for AOPC 23. Results from PFAS-C are discussed in Section 5.23 and results from previous sampling in 2018-2019 at AOPC 23 are discussed in Section 3.6.23. Previous soil and groundwater sampling results are shown Figures 5-3 and Figure 5-16, respectively.

Recommendations

- PRP Analysis: Preliminary information indicates that CANG is the possible contributor to PFAS releases at AOPC 23.
- Further Investigation: A remedial investigation is recommended for AOPC 23.

6.24 AOPC 24 – MIDDLEFIELD-ELLIS-WHISMAN (MEW) PLUME

Conclusions

Groundwater samples were collected at four locations within AOPC 24. Eleven of the 28 PFAS were detected in groundwater samples from AOPC 24. PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in one sample. PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L in three samples. PFOS concentrations exceeded the groundwater ESL of 6.5 ng/L in two samples. PFHxS was detected at concentration exceeding the groundwater RSL of 39 ng/L in one sample. PFBS was not detected at concentrations exceeding any screening levels. PFNA and HFPO-DA were non-detect in all samples.

Recommendations

- PRP Analysis: Preliminary information indicates that the MEW PRPs are possible contributors to PFAS releases at AOPC 24.
- Further Investigation: Further investigation of the horizontal and vertical extents of PFAS in groundwater is recommended.

6.25 AOPC 25 – ORION PARK PLUME

Conclusions

Groundwater samples were collected at two locations within AOPC 25. Ten of the 28 PFAS were detected in groundwater samples from AOPC 25. PFOS was detected at concentrations exceeding the groundwater ESL of 6.5 ng/L in one sample and exceeding the groundwater RSL of 4 ng/L in two samples. PFOA, PFNA, PFHxS, HFPO-DA, and PFBS were not detected at concentrations exceeding any screening levels.

Recommendations

- PRP Analysis: To date, the source for the Orion Park Plume has not been identified.

- Further Investigation: Further investigation of the horizontal and vertical extents of PFAS in groundwater is recommended.

6.26 AOPC 26 – EASTERN BOUNDARY (IR 5)

Conclusions

A groundwater sample was collected along the ARC eastern property boundary at one location beside Lockheed Martin at well W5-3 and within former Site 5. Fifteen of the 28 PFAS were detected in the groundwater sample at this location. PFOA was detected at concentration exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L. PFOS was detected at concentration exceeding the groundwater RSL of 4 ng/L and the groundwater ESL of 6.5 ng/L. PFNA and PFHxS concentrations exceeded the groundwater RSLs of 5.9 and 39 ng/L, respectively. The detected concentration of PFBS did not exceed any screening levels, and HFPO-DA was not detected in the sample.

Recommendations

- PRP Analysis: Preliminary information indicates that the Navy and Lockheed Martin are both possible contributors to PFAS releases at AOPC 26.

- Further Investigation: Further investigation of the horizontal and vertical extents of PFAS in groundwater is recommended.

6.27 PATH FORWARD

All 26 AOPCs included in this SI are recommended for further PFAS evaluation based on data exceeding screening levels or the need to collect additional data to evaluate potential PFAS impacts (e.g., AOPC 19 - Stormwater Retention Pond [within IR 25]). The highest detections for PFAS compounds with USEPA RSLs that have been identified in groundwater and soil, respectively, at ARC to date include: PFOS (40,000 ng/L, 1,900 µg/kg), PFOA (5,540 ng/L, 120 µg/kg), PFBS (1,500 ng/L, 1.8 µg/kg), HPFO-DA (estimated 6.10 ng/L, not detected in soil), PFHxS (10,400 ng/L, 92.0 µg/kg), and PFNA (111 ng/L, 2.60 µg/kg). Recommendations for each medium and AOPC are summarized in Table 6-1.

Currently the SI data indicate that PFAS are present in the surface water migrating off site. Further investigation is necessary to determine if there are unacceptable impacts from the presence of PFAS in off-site surface water based on determination of potential receptors and development of risk-based criteria using site specific parameters.

Table 6-1. Conclusions and Recommendations

AOPC	Screening Level Exceedances				Recommendations	PRP Analysis
	Soil	Groundwater	Surface Water	Influent/Effluent		
AOPC 1 - FORMER FIREFIGHTING TRAINING AREA (IR 10, 12, 20)	PFOS was detected at concentrations exceeding the soil RSL of 13 µg/kg in five samples and above the human health and ecologic ESLs of 12 µg/kg and 13 µg/kg, respectively, in five samples. PFOA was detected at concentrations exceeding the human health ESL of 3.8 µg/kg in five samples. PFOA concentrations exceeded the ecologic ESL of 84 µg/kg in one sample. PFOA exceeded the soil RSL of 19 µg/kg in three samples. There were no exceedances of the RSL for PFNA, PFHxS, HFPO-DA, or PFBS.	PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and exceeding the groundwater ESL of 5.1 ng/L in eight samples. PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L and exceeding the groundwater ESL of 6.5 ng/L in nine samples. PFHxS was detected at concentrations exceeding the groundwater RSL of 39 ng/L in eight samples. PFNA was detected at a concentration exceeding the groundwater RSL of 5.9 ng/L in two samples. PFBS was detected at concentration exceeding the groundwater RSL of 600 ng/L in one sample. HFPO-DA was non-detect in all samples.	--	--	Further investigate the horizontal and vertical extents of PFAS in groundwater and soil.	Preliminary information indicates that NASA, the Navy, and CANG are all possible contributors to PFAS releases at AOPC 1
AOPC 2 - CRASH SITE (SUNNYVALE GOLF COURSE)	PFOS was detected at concentrations exceeding the RSL, human health and ecologic ESLs in four samples. PFOA was detected at concentrations exceeding the human health ESL of 3.8 µg/kg in four samples. PFBS, PFHxS, and PFNA were not detected above screening criteria. HFPO-DA was non-detect in all samples.	PFOS was detected at concentrations exceeding the groundwater ESL of 6.5 ng/L and the groundwater RSL of 4 ng/L in three samples. PFOA, PFBS, PFNA, and PFHxS did not exceed any screening values. HFPO-DA was non-detect in all samples.	--	--	Further investigate the horizontal and vertical extents of PFAS in groundwater and soil.	Preliminary information indicates that the Navy is the possible contributor to PFAS releases at AOPC 2.
AOPC 3 - HANGARS 2 AND 3 (IR 7)	--	PFOA was detected at a concentration exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in six samples. PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L and the groundwater ESL in seven samples. PFNA was detected at a concentration exceeding the groundwater RSL of 5.9 ng/L in one sample. HFPO-DA was detected at a concentration exceeding the groundwater RSL of 6 ng/L in one sample. PFHxS was detected at concentration exceeding the groundwater RSL of 39 ng/L in five samples. PFBS was not detected above any screening levels.	--	--	Further investigate horizontal and vertical extents of PFAS in groundwater.	Preliminary information indicates that the Navy and CANG are possible contributors to PFAS releases at AOPC 3.
AOPC 4 - FORMER ENGINE TEST STAND AREA (IR 11)	--	PFOA was detected at a concentration exceeding the groundwater RSL of 6 ng/L and groundwater ESL of 5.1 ng/L in both samples. There were no screening level exceedances for PFBS, PFHxS or PFOS, and neither PFNA nor HFPO-DA were detected in any samples.	--	--	Further investigate the horizontal and vertical extents of PFAS in groundwater.	Preliminary information indicates that the Navy is the possible contributor to PFAS releases at AOPC 4.
AOPC 5 – HANGAR N211 (WITHIN AOI 3 AND FORMERLY AOI 12)	--	PFBS was detected in one sample at concentrations exceeding the groundwater RSL of 600 ng/L. PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in seven samples. PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L and the groundwater ESL of 6.5 ng/L in seven samples. PFHxS was detected at concentrations exceeding the groundwater RSL of 39 ng/L in five samples. PFNA was detected at concentrations exceeding the groundwater RSL of 5.9 ng/L in five samples. HFPO-DA was not detected in any samples.	--	--	Further investigate the horizontal and vertical extents of PFAS in groundwater.	Preliminary information indicates that NASA is the possible contributor to PFAS releases at AOPC 5.
AOPC 6 – HANGAR N248 (AOI 3 EAST)	PFOS was detected at concentrations exceeding the RSL of 13 µg/kg and the human health and ecologic ESLs of 12 µg/kg and 13 µg/kg in both samples. PFOA was detected at concentrations exceeding the human health ESL of 3.8 µg/kg in one sample. There were no detections exceeding PFBS, PFNA, or PFHxS screening level exceedances. HFPO-DA was non-detect in all samples.	PFBS was detected at concentrations exceeding the groundwater RSL of 600 ng/L in one sample. PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in all three samples. PFOS was also detected at concentrations exceeding the groundwater RSL of 4 ng/L and the groundwater ESL of 6.5 ng/L in all three samples. PFHxS exceeded the groundwater RSL of 39 ng/L in three samples and PFNA exceeded the groundwater RSL of 5.9 ng/L in one sample. HFPO-DA was non-detect in all samples.	--	--	Further investigate the horizontal and vertical extents of PFAS in groundwater and soil.	Preliminary information indicates that NASA is the possible contributor to PFAS releases at AOPC 6.
AOPC 7 – FIRE DEPARTMENT (BUILDING 580)	PFOS was detected at concentrations exceeding the soil RSL of 13 µg/kg and the human health and ecologic ESLs of 12 µg/kg and 13 µg/kg, respectively, in all four samples. PFOA was detected at a concentration exceeding the human health ESL of 3.8 µg/kg in one sample. There were no PFHxS, PFNA, or PFBS screening level exceedances. HFPO-DA was not detected in any samples.	PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in four samples. PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L and the groundwater ESL of 6.5 ng/L in five samples. PFHxS exceeded the groundwater RSL of 39 ng/L in four samples and PFNA exceeded the groundwater RSL of 5.9 ng/L in one sample. PFBS did not exceed any screening levels. HFPO-DA was not detected in any samples.	--	--	Further investigate the horizontal and vertical extent of PFAS in groundwater and soil. For the purposes of further investigation, AOPC 7 will be subsumed into AOPC 1 as the PFAS compounds are the same or similar, and AOPC 7 is within AOPC 1.	Preliminary information indicates that NASA, the Navy, and CANG are all possible contributors to PFAS releases at AOPC 7.
AOPC 8 – SITE 1 RUNWAY LANDFILL (IR 1)	--	PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in two samples. PFOS, PFBS, and PFHxS did not exceed any screening levels. PFNA and HFPO-DA were non-detect in all samples.		--	Further investigate the horizontal and vertical extents of PFAS in groundwater.	Preliminary information indicates that the Navy is the possible contributor to PFAS releases at AOPC 8.

Table 6-1. Conclusions and Recommendations (continued)

AOPC	Screening Level Exceedances				Recommendations	PRP Analysis
	Soil	Groundwater	Surface Water	Influent/Effluent		
AOPC 9 – SITE 2 FORMER GOLF COURSE LANDFILL (IR 2)	--	PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L in three samples. These three samples also exceeded the groundwater ESL of 5.1 ng/L. PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L in three samples. These three samples also exceeded the groundwater ESL of 6.5 ng/L. PFHxS was detected at concentrations exceeding the groundwater RSL of 39 ng/L in three samples. PFBS and PFNA did not exceed any screening levels. HFPO-DA was non-detect in all samples.	--	--	Further investigate the horizontal and vertical extents of PFAS in groundwater.	Preliminary information indicates that the Navy is the possible contributor to PFAS releases at AOPC 9.
AOPC 10 – SITE 22 LANDFILL (IR 22)	--	PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in five samples. PFOS was detected at a concentration exceeding the groundwater RSL of 4 ng/L and the groundwater ESL of 6.5 ng/L in five samples. PFHxS was detected at concentrations exceeding the groundwater RSL of 39 ng/L in one sample. PFBS and PFNA did not exceed any screening levels. HFPO-DA was non-detect in all samples.	--	--	Further investigate the horizontal and vertical extents of PFAS in groundwater.	Preliminary information indicates that the Navy is the possible contributor to PFAS releases at AOPC 10.
AOPC 11 - BUILDING 191 PUMP STATION	--	--	PFNA was detected at a concentration of 13 ng/L, PFHxS was detected at a concentration of 930 ng/L, PFBS was detected at a concentration of 130 ng/L, PFOA was detected at a concentration of 340 ng/L, and PFOS was detected at a concentration of 1,400 ng/L. HFPO-DA was not detected in the sample. There are currently no screening levels for surface water.	--	Further investigation of the presence of PFAS in surface water is recommended, including the possibility of a pathway between AOPC 11 (Building 191 Pump Station), AOPC 16 (North Patrol Road Ditch and Northern Channel), and AOPC 17 (Marriage Road Ditch).	Preliminary information indicates that NASA, the Navy, and CANG are all possible contributors to PFAS releases at AOPC 11.
AOPC 12 - STORMWATER SETTLING BASIN/EASTERN DIKED MARSH (WITHIN IR 25)	--	--	PFBS was detected at a concentration of 4 ng/L, PFOA was detected at an estimated concentration of 1.1 ng/L, PFHxS was detected at 6 ng/L, and PFOS was detected at a concentration of 5.5 ng/L. HFPO-DA and PFNA were not detected in the sample. There are currently no screening levels for surface water.	--	Further investigate the sources and extent of PFAS in surface water.	Preliminary information indicates that NASA and the Navy are possible contributors to PFAS releases at AOPC 12.
AOPC 13 - NASA GROUNDWATER EXTRACTION TREATMENT SYSTEM	--	--	PFBS was detected at an estimated concentration of 1.3 ng/L, PFOA was detected at an estimated concentration of 1.1 ng/L, PFHxS was detected at 5.4 ng/L, and PFOS was detected at a concentration of 7.4 ng/L. HFPO-DA and PFNA were not detected in the sample. There are currently no screening levels for surface water.	Influent/effluent results were compared to USEPA and State groundwater screening levels for evaluation purposes only. Concentrations in the influent sample exceeded the groundwater RSLs for PFOS, PFHxS, and PFOA, as well as the groundwater ESLs for PFOS and PFOA. Concentrations of PFOS in the effluent sample exceeded the groundwater RSL of 4 ng/L; however, the concentration in the duplicate sample was under the RSL.	Further investigation of the extent of PFAS in surface water at AOPC 13 is recommended, along with routine quarterly monitoring of the influent and effluent and taking additional steps as needed based on results.	Preliminary information indicates that NASA, the Navy, and MEW PRPs are all possible contributors to PFAS releases at AOPC 13.
AOPC 14 - MIDDLEFIELD-ELLIS-WHISMAN GROUNDWATER EXTRACTION TREATMENT SYSTEM	--	--	PFBS was detected at an estimated concentration of 1.3 ng/L, PFOA was detected at an estimated concentration of 1.1 ng/L, PFHxS was detected at 5.4 ng/L, and PFOS was detected at a concentration of 7.4 ng/L. HFPO-DA and PFNA were not detected in the sample. There are currently no screening levels for surface water.	Influent/effluent results were compared to USEPA and State groundwater screening levels for evaluation purposes only. Concentrations in both samples exceeded the groundwater RSLs for PFOS, PFOA, and PFHxS, as well as the groundwater ESLs for PFOS and PFOA. In all cases except for PFBA and PFPeA, the influent concentration was higher than the effluent concentration, and for these two compounds the difference was negligible.	Further investigate discharges from the MEW GWETS into Stevens Creek is recommended. Routine quarterly monitoring of the influent and effluent is also recommended, and additional steps should be taken based on results. In addition, it is recommended that a treatment train modification is considered to eliminate discharge of PFAS from the treatment system. The MEW GWETS should be updated to reduce concentrations of PFAS to below appropriate discharge concentrations in Stevens Creek.	Preliminary information indicates that the NASA, the Navy, and MEW PRPs are the possible contributors to PFAS releases at AOPC 14.
AOPC 15 - WEST-SIDE AQUIFERS TREATMENT SYSTEM	--	--	--	Influent and effluent results were compared to USEPA and State groundwater screening levels for evaluation purposes only. Concentrations in the influent sample exceeded the groundwater RSLs for PFOS, PFOA, and PFHxS, as well as the groundwater ESLs for PFOS and PFOA. Twelve of the 28 PFAS compounds were detected in the influent sample from AOPC 15. The only PFAS compound detected in the effluent sample was PFBA, at an estimated concentration of 3.9 ng/L.	Routine quarterly monitoring of the influent and effluent is recommended, and take additional steps should be taken as needed based on the results.	Preliminary information indicates that NASA, the Navy, and MEW PRPs are all possible contributors to PFAS releases at AOPC 15.
AOPC 16 - NORTH PATROL ROAD DITCH (IR 21) AND NORTHERN CHANNEL (IR 27)	--	PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in four samples. PFOS was also detected at concentrations exceeding the groundwater RSL of 4 ng/L and the groundwater ESL of 6.5 ng/L in three samples. PFHxS was detected at concentrations exceeding the groundwater RSL of 39 ng/L in two samples. PFBS and PFNA were not detected at any concentrations exceeding any screening levels. HFPO-DA was non-detect in all samples.	--	--	Further investigation of the horizontal and vertical extents of PFAS in groundwater is recommended. The pathway of PFAS in surface water between AOPC 11 (Building 191 Pump Station), AOPC 16 (North Patrol Road Ditch and Northern Channel), and AOPC 17 (Marriage Road Ditch) should also be investigated.	Preliminary information indicates that NASA, the Navy, and CANG are all possible contributors to PFAS releases at AOPC 16.

Table 6-1. Conclusions and Recommendations (continued)

AOPC	Screening Level Exceedances				Recommendations	PRP Analysis
	Soil	Groundwater	Surface Water	Influent/Effluent		
AOPC 17 - MARRIAGE ROAD DITCH (IR 3)	--	PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in four samples. PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L and the groundwater ESL of 6.5 ng/L in four samples. PFHxS was detected at concentrations exceeding the groundwater RSL in four samples. PFNA and PFBS were not detected at concentrations exceeding any screening levels. HFPO-DA was not detected.	--	--	Further investigation of the horizontal and vertical extents of PFAS in groundwater is recommended. The pathway of PFAS in surface water between AOPC 11 (Building 191 Pump Station), AOPC 16 (North Patrol Road Ditch and Northern Channel), and AOPC 17 (Marriage Road Ditch) should also be investigated.	Preliminary information indicates that NASA, the Navy, and CANG are all possible contributors to PFAS releases at AOPC 17.
AOPC 18 - LINDBERGH AVENUE STORM DRAIN DITCH (AOI 6)	--	PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in two samples. PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L and the groundwater ESL of 6.5 ng/L in all three samples. PFHxS was detected at concentrations exceeding the groundwater RSL in two samples. PFBS and PFNA did not exceed any screening levels. HFPO-DA was non-detect in all samples.	--	--	Further investigate the horizontal and vertical extents of PFAS in groundwater.	Preliminary information indicates that the Navy and NASA are both possible contributors to PFAS releases at AOPC 18.
AOPC 19 - STORMWATER RETENTION PONDS (WITHIN IR 25)	--	--	One surface water sample was collected at AOPC 19. However, this sample was flagged with qualifiers during data validation that indicated the sample should be excluded from the dataset. This sample was therefore not included in the data evaluation.	--	Re-sampling of surface water is recommended for AOPC 19, along with sediment sampling.	Preliminary information indicates that the Navy and NASA would be possible contributors to PFAS releases at AOPC 19.
AOPC 20 - BUILDING N271 INDUSTRIAL WASTEWATER PRETREATMENT PLANT	--	--	--	Effluent results were compared to USEPA and State groundwater screening levels for evaluation purposes only. Concentrations in the sample exceeded the groundwater RSLs for PFOS, PFOA, and PFHxS, and the groundwater ESLs for PFOS and PFOA. There were no PFBS or PFNA screening level exceedances, and HFPO-DA was non-detect for all samples.	Routine quarterly monitoring of the effluent is recommended, and additional steps should be taken as needed based on results.	Preliminary information indicates that NASA and the MEW PRPs would be both possible contributors to PFAS releases at AOPC 20.
AOPC 21 - FORMER INDUSTRIAL WASTEWATER SURFACE IMPOUNDMENT (IR 4)	--	PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in seven samples. PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L and the groundwater ESL of 6.5 ng/L in five samples. In one additional sample, only the PFOS groundwater RSL of 4 ng/L was exceeded. PFHxS was detected at concentrations exceeding the groundwater RSL of 39 ng/L in five samples. PFNA, PFBS, and HFPO-DA were not detected at concentrations exceeding any screening levels.	--	--	Further investigate the horizontal and vertical extents of PFAS in groundwater.	Preliminary information indicates that the Navy is the possible contributor to PFAS releases at AOPC 21.
AOPC 22 - BUILDING N249 OUTDOOR AERODYNAMIC RESEARCH FACILITY	--	PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L and the groundwater ESL of 6.5 ng/L in three samples. PFHxS was detected at concentrations exceeding the groundwater RSL of 39 ng/L in one sample. PFOA, PFNA, PFBS, and HFPO-DA were not detected at concentrations exceeding any screening levels.	--	--	Further investigate the horizontal and vertical extents of PFAS in groundwater.	Preliminary information indicates that NASA is the possible contributor to PFAS releases at AOPC 22.
AOPC 23 - HANGAR 4 (CANG) BUILDING 662	No samples were collected from this AOPC as a part of this SI, as the presence of PFAS already had been established during previous investigations. Results from these previous investigations are discussed in Section 3.6.23.	Previous sampling efforts already identified the presence of PFAS at AOPC 23 prior to this SI. However, during the SI, one groundwater sample was collected from a new well, PFAS-C, which is near a well previously sampled for AOPC 23. Results from PFAS-C are discussed in Section 5.23 and results from previous sampling in 2018-2019 at AOPC 23 are discussed in Section 3.6.23.	--	--	A remedial investigation is recommended for AOPC 23.	Preliminary information indicates that CANG is the possible contributor to PFAS releases at AOPC 23.
AOPC 24 - MIDDLEFIELD-ELLIS-WHISMAN (MEW) PLUME	--	PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L in one sample. PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L in three samples. PFOS also exceeded the groundwater ESL of 6.5 ng/L in two samples. PFHxS was detected at a concentration exceeding the groundwater RSL of 39 ng/L in one sample. PFBS was not detected at concentrations exceeding any screening levels. PFNA and HFPO-DA were non-detect in all samples.	--	--	Further investigate the horizontal and vertical extents of PFAS in groundwater.	Preliminary information indicates that the MEW PRPs are possible contributors to PFAS releases at AOPC 24.
AOPC 25 - ORION PARK PLUME	--	PFOS was detected at concentrations exceeding the groundwater ESL of 6.5 ng/L in one sample and exceeding the groundwater RSL of 4 ng/L in two samples. PFOA, PFHxS, and PFBS were not detected at concentrations exceeding any screening levels. HFPO-DA and PFNA were non-detect in all samples.	--	--	Further investigate the horizontal and vertical extents of PFAS in groundwater.	To date, the source for the Orion Park Plume has not been identified.

Table 6-1. Conclusions and Recommendations (continued)

AOPC	Screening Level Exceedances				Recommendations	PRP Analysis
	Soil	Groundwater	Surface Water	Influent/Effluent		
AOPC 26 - EASTERN BOUNDARY (IR 5)	--	PFOA was detected at concentrations exceeding the groundwater RSL of 6 ng/L and the groundwater ESL of 5.1 ng/L. PFOS was detected at concentrations exceeding the groundwater RSL of 4 ng/L and the groundwater ESL of 6.5 ng/L. PFNA and PFHxS exceeded the groundwater RSLs of 5.9 ng/L and 39 ng/L, respectively. The detected concentration for PFBS did not exceed any screening levels, and HFPO-DA was not detected in the sample.	--	--	Further investigate the horizontal and vertical extents of PFAS in groundwater.	Preliminary information indicates that the Navy and Lockheed Martin are both possible contributors to PFAS releases at AOPC 26.

APPENDIX A
SITE INSPECTION WORK PLAN

Site Inspection Work Plan Modifications

See Section 4.7 of text for an explanation of the following five changes in the planned sample locations: Well PFAS-B was not installed; and Wells 3/114-MW1 (AOPC 3), W7-19 (AOPC 3), W3-3 (AOPC 17), W2-2A (AOPC 9), and LGMW-1 (AOPC 10) in the SIWP and SAP/QAPP were not found, and therefore were replaced with nearby wells UST3-MW-02, W7-3, W3-8, W2-12, and WGC2-1, respectively.

Appendix A - ARC Site Investigation Work Plan

Table A-1 - Proposed Sample Overview

Facility/ Center	Area of Potential Concern	Matrix	Well Id	Number of Samples	Sample Depth (ft bgs)[5]	Well Depth (ft bgs)[6]	Analyses[1]	Rationale	Screening Level[2]	Figure
Ames Research Center	AOPC 1 - Former Firefighting Training Area (IR 10, 12, 20)	Soil	NA	*8*	0 to 0.5 and 0.5 to 2	NA	EPA Method 537.1 and DoD QSM	Sample beside the paved areas here PFAs may have run off the pavement surface: at IR 20, one discrete sample location near the pavement, an beside the runways 3 discrete sample locations in unpaved areas between runways and connecting roadways.	Federal screening level[2]	Appendix F, Figures F-2 (soils) and F-3 (groundwater)
	1, 6, 7[4]	Groundwater	14C60A	1	1.49	No Record		Determine presence or absence of PFAS in groundwater at AOPC. Seven Existing wells at AOPC to check PFAS in groundwater. Two Existing Wells combined with AOPCs 6,7, and 23 sampling due to proximity		
	1, 7		11N21A1	1	-0.80	21.00				
	1, 7		PZA1-5C	1	5.49	27.50				
	1, 7		UST29-MW02	1	-0.37	16.50				
	1, 7		W20-01	1	2.47	No Record				
	1, 7		WU4-25	1	10.93	17.50				
	1, 7		WU4-9	1	5.86	47.20				
	AOPC 2- Crash Site (Sunnyvale Golf Course)	Soil	NA	*14*	0 to 0.5 and 0.5 to 2	NA	EPA Method 537.1 and DoD QSM	Sample seven locations on the 12th fairway around the crash site location.	Federal screening level[2]	Appendix F, Figures F-2 (soils) and F-4 (groundwater)
	2,26	Groundwater	New Well #C	1	5 bgs - 19.5bgs[8]	20[8]		Determine presence or absence of PFAS in groundwater at AOPC. Five New wells upgradient and downgradient of crash site to check PFAS in groundwater. Two New wells combined with AOPC 25 sampling due to proximity		
	2,26		New Well #D	1	5 bgs - 19.5bgs[8]	20[8]				
	2		New Well #E	1	5 bgs - 19.5bgs[8]	20[8]				
	2		New Well #F	1	5 bgs - 19.5bgs[8]	20[8]				
	2		New Well #G	1	5 bgs - 19.5bgs[8]	20[8]				
	AOPC 3 - Hangars 2 & 3 (IR 7)	Groundwater	NA				EPA Method 537.1 and DoD QSM	Determine presence or absence of PFAS in groundwater at AOPC. Seven Existing wells and one New well at and downgradient of AOPC to check PFAS in groundwater.	Federal screening level[2]	Appendix F, Figure F-5
	3		3/114-MW1	1	No Result[7,9]	No Record				
	3		W7-10	1	8bgs - 18 bgs	18.00				
	3		W7-11	1	9bgs - 15 bgs	15.00				
	3		W7-13	1	15 bgs - 25 bgs	25.00				
	3		W7-19	1	15 bgs - 25 bgs	20.00				
	3		W7-9	1	38.5 bgs - 43.5 bgs	43.50				
	3		W19-2	1	50.9 bgs - 55.9 bgs	55.90				
	3		New Well #B	1	5 bgs - 19.5bgs[8]	20[8]				
	AOPC 4 - Former Engine Test Stand Area (IR 11)	Groundwater	NA				EPA Method 537.1 and DoD QSM	Determine presence or absence of PFAS in groundwater at AOPC. One Existing well and one New well to determine potential impact to groundwater.	Federal screening level[2]	Appendix F, Figure F-6
	4		W11-2	1	17.5bgs-22.5 bgs	22.5				
	4,11		New Well #H	1	5 bgs - 19.5bgs[8]	20[8]				
	AOPC 5 - Hangar N211 (within AOI 3, formerly AOI 12)	Groundwater	NA	*0*	0 to 0.5 and 0.5 to 2	NA	EPA Method 537.1 and DoD QSM	Determine presence or absence of PFAS in groundwater at AOPC. Five Existing wells to check PFAS in groundwater combined with AOPC 23 sampling due to proximity.	Federal screening level[2]	Appendix F, Figure F-7
	5		14D12A	1	5.62	25.00				
	5		14D28A	1	4.70	No Record				
	5		14D36A	1	4.72	No Record				
	5		14D39A	1	3.66	No Record				
	5		REG-6A PIE	1	No Result[7,9]	No Record				
	5		WNB-14	1	6.22	29.00				
	5		WU4-19	1	3.29	41.50				
	AOPC 6 - Hangar N248 (AOI 3 East)	Soil	NA	*2*	0 to 0.5 and 0.5 to 2	NA	EPA Method 537.1 and DoD QSM	Sample in the unpaved areas at one location where PFAs may have run off the paved areas	Federal screening level[2]	Appendix F, Figures F-2 and F-8
	6	Groundwater	WU4-18	1	1.50	24.50		Determine presence or absence of PFAS in groundwater at AOPC. One Existing wells + One Existing wells combined with AOPC 23		
	6		14D02A	1	3.37	25.00				
	AOPC 7 - Fire Department (Building 580)	Soil	NA	*4*	0 to 0.5 and 0.5 to 2	NA	EPA Method 537.1 and DoD QSM	Sample 2 discrete sample locations beside the paved areas where PFAs may have run off the pavement surface .	Federal screening level[2]	Appendix F, Figures F-2 and F-3
		Groundwater						Determine presence or absence of PFAS in groundwater at AOPC. Seven Existing Wells combined with AOPCs 1, 6 and 23 sampling due to proximity		

Appendix A - ARC Site Investigation Work Plan

Table A-1 - Proposed Sample Overview

Facility/ Center	Area of Potential Concern	Matrix	Well Id	Number of Samples	Sample Depth (ft bgs)[5]	Well Depth (ft bgs)[6]	Analyses[1]	Rationale	Screening Level[2]	Figure
Ames Research Center	AOPC 8 - Site 1 Runway Landfill (IR 1)	Groundwater					EPA Method 537.1 and DoD QSM	Determine presence or absence of PFAS in groundwater at AOPC. Five Existing Wells	Federal screening level[2]	Appendix F, Figure F-9
	8		W1-14	1	4.1 bgs-14.1 bgs	14.50				
	8		W1-19	1	No Result[7,9]	No Record				
	8		W1-1R	1	14.3 bgs-24.3 bgs	24.70				
	8		W1-20	1	No Result[7,9]	No Record				
	8		W1-5	1	14.5 bgs-19.5 bgs	19.50				
	AOPC 9 - Former Golf Course Landfill (IR 2)	Groundwater					EPA Method 537.1 and DoD QSM	Determine presence or absence of PFAS in groundwater at AOPC. Two Existing Well + One Existing Well combined with AOPC 16 sampling due to proximity	Federal screening level[2]	Appendix F, Figure F-10
	9,16		W2-16	1	7.5 bgs-17.5 bgs	17.50				
	9		W2-2A	1	No Result[7,9,11]	No Record				
	9		W2-13	1	5.1 bgs-15.1 bgs	15.50				
	AOPC 10 - Site 22 Landfill (IR 22)	Groundwater					EPA Method 537.1 and DoD QSM	Determine presence or absence of PFAS in groundwater at AOPC. Six Existing wells + Three Existing Wells combined with AOPC 16 sampling due to proximity	Federal screening level[2]	Appendix F, Figure F-11
	10,16		WGC2-12	1	9.5 bgs-19.5 bgs	19.80				
	10		WGC2-13	1	10 bgs-20 bgs	20.50				
	10		WGC2-6	1	14 bgs-24 bgs	24.00				
	10		WGC2-10	1	9.2 bgs-19.2 bgs	19.50				
	10		WGC2-11	1	9.5 bgs-19.5 bgs	19.50				
	10		LGMW-1	1	No Result[7,9,11]	No Record				
	10,16		WGC2-4	1	10 bgs-20 bgs	20.00				
	10,16		WGC2-5	1	12 bgs-22 bgs	22.00				
	10		WGC2-8	1	12.8 bgs-22.8 bgs	23.00				
	AOPC 11 - Building 191 Pump Station	Surface Water, Effluent	NA	1	NA	NA	EPA Method 537.1 and DoD QSM	Determine presence or absence of PFAS in surface water discharge at AOPC.	Federal screening level[2]	Appendix F, Figure F-1
	AOPC 12 - Stormwater Settling Basin/Eastern Diked Marsh (within IR 25)	Surface Water	NA	1	NA	NA		Determine presence or absence of PFAS in surface water at stormwater settling basin effluent and overflow in Eastern Diked Marsh	Federal screening level[2]	Figure 4-9 & Appendix F, Figure F-1
	AOPC 13 - NASA Groundwater Extraction Treatment Plant	Influent and Effluent	NA	2	NA	NA		Determine presence or absence of PFAS in groundwater post granulated activated carbon treatment (GAC), at Building N271 before Reverse Osmosis (RO) for reuse and RO brine.	Federal screening level[2]	Appendix F, Figure F-1
	AOPC 14 - MEW Groundwater Extraction Treatment Plant	Influent and Effluent	NA	2	NA	NA		Determine presence of PFAS in treated groundwater for NPDES discharge	Federal screening level[2]	Appendix F, Figure F-1
	AOPC 15 - West-Side Aquifers Groundwater Extraction Treatment Plant	Influent and Effluent	NA	2	NA	NA		Determine presence of PFAS in treated groundwater for NPDES discharge	Federal screening level[2]	Appendix F, Figure F-1
	AOPC 16 - Northern Patrol Road Ditch (IR 21)/Northern Channel (IR 27)	Groundwater					EPA Method 537.1 and DoD QSM	Determine presence or absence of PFAS in groundwater at AOPC. One Existing well + Four Existing Wells combined with AOPC 9 and 10 sampling due to proximity	Federal screening level[2]	Appendix F, Figure F-12
	16		WU5-9	1	15 bgs-20 bgs	20.50				
	AOPC 17 - Marriage Road Ditch (IR 3)	Groundwater					EPA Method 537.1 and DoD QSM	Determine potential impact to groundwater. Three Existing wells + Two Existing Wells combined with AOPC 21 sampling due to proximity	Federal screening level[2]	Appendix F, Figure F-13
	17,21		EXW-4	1	No Result[7,9,11]	No Record				
	17,21		WU5-12	1	39.8 bgs-54.8 bgs	55.00				
	17		W3-1	1	10 bgs-20 bgs	19.70				
	17		W3-20	1	12 bgs-22 bgs	22.00				
	17		W3-3	1	8 bgs-18.1 bgs	18.10				
	AOPC 18 - Lindbergh Avenue Storm Drain Ditch (AOI 6)	Groundwater					EPA Method 537.1 and DoD QSM	Determine potential impact to groundwater. Two Existing wells + One Proposed New Well combined with AOPCs 22 and 23 sampling due to proximity	Federal screening level[2]	Appendix F, Figure F-14
	18,22		WNB-7	1	-2.01	20.00				
	18,22		11E02A	1	-2.60	17.50				
	18		New Well #A	1	5 bgs - 19.5bgs[8]	20[8]				
	AOPC 19 - Stormwater Retention Ponds (within IR 25)	Two Surface Water samples at culvert discharges	NA	2	NA	NA	EPA Method 537.1 and DoD QSM	Determine presence or absence of PFAS in surface water at AOPC. Samples will be taken once during the wet season.	Federal screening level[2]	Appendix F, Figure F-1
	AOPC 20 - Building N271 Industrial Wastewater Pretreatment Plant	Influent and Effluent for RO system	NA	2	NA	NA	EPA Method 537.1 and DoD QSM	Determine presence of PFAS pre-and post treatment before reuse	Federal screening level[2]	Appendix F, Figure F-1

Table A-1 - Proposed Sample Overview

Facility/ Center	Area of Potential Concern	Matrix	Well Id	Number of Samples	Sample Depth (ft bgs)[5]	Well Depth (ft bgs)[6]	Analyses[1]	Rationale	Screening Level[2]	Figure
Ames Research Center	AOPC 21 - Former Industrial Wastewater Surface Impoundment (IR 4)	Groundwater					EPA Method 537.1 and DoD QSM	Determine potential impact to groundwater. Six Existing wells + Two Existing Wells combined with AOPCs 17 sampling due to proximity	Federal screening level[2]	Appendix F, Figure F-15
	21		W4-14	1	6 bgs-16 bgs	16.00				
	21		W4-6	1	35 bgs-50 bgs	50.00				
	21		X	1	28 bgs-40 bgs	40.00				
	21		X	1	10 bgs-20 bgs	20.00				
	21		WSW-5	1	15 bgs-20 bgs	20.40				
	21		WU5-10	1	33.8 bgs-38.8 bgs	39.00				
	AOPC 22 – Building N249 Outdoor Aerodynamic Research Facility	Groundwater					EPA Method 537.1 and DoD QSM	Determine presence or absence of PFAS in groundwater at AOPC. Two existing wells + Two Existing Wells combined with AOPC 18 sampling due to proximity	Federal screening level[2]	Appendix F, Figure F-16
	22		10J01A	1	2bgs-12bgs	17.50				
	22		10J02A	1	6bgs-16bgs	16				
	AOPC 23 - Hangar 4 (CANG) Building 662	Groundwater	NA	NA	NA	NA	NA	No further action in the SI, but it will move to Remedial Investigation.	Federal screening level[2]	Appendix F, Figures F-4-8
	AOPC 24 - Middlefield-Ellis-Whisman (MEW) Plume	Groundwater					EPA Method 537.1 and DoD QSM	Determine potential impact to onsite groundwater by offsite source. Four Existing wells +12 Existing Wells combined with AOPCs 1,5,6, and 7 sampling due to proximity	Federal screening level[2]	Appendix F, Figure F-17
	24		64A	1	No Result[7,9]	No Record				
	24		**171A**	1	***17 bgs - 27 bgs***	28.50				
	24		WU4-1	1	22.49	29.30				
	24		W89-1	1	22.86	29.80				
	AOPC 25 - Orion Park Plume[3]	Groundwater					EPA Method 537.1 and DoD QSM	Determine potential impact to onsite groundwater by offsite source. Two Existing wells + One Proposed New Well combined with AOPCs 18 and 22 sampling due to proximity	Federal screening level[2]	Appendix F, Figure F-18
	25		15B10A	1	8.57	No Record				
	25		15H12A	1	8.87	No Record				
	AOPC 26 - Lockheed Martin	Groundwater					EPA Method 537.1 and DoD QSM	Determine potential impact to onsite groundwater by offsite source. One Existing well and Two Proposed New Wells combined with AOPC 2 sampling due to proximity	Federal screening level[2]	Appendix F, Figure F-4, and F-19
	26		W5-3	1	20.2bgs-30.5 bgs	30.50				

Summary of Samples

Influent and Effluent =	8
Surface Water =	4
Groundwater Well Samples =	72
Soil Samples =	28
Replacement Wells	11
New Wells	8
Drums (for 19 wells) of IDW Drill Cuttings[10] =	41

Notes

1 Method should be compliant with Table B-15 of the Department of Defense Quality Systems Manual (QSM) version 5.3 or later. The PFAS analytes reported should be the combination of those listed in the EPA Method 537.1 and those listed for Department of Defense QSM. With the exception that N-methylperfluorooctanesulfonamide (CAS No. 31506-32-8) will not be analyzed.

2 Federal Screening Level: EPA RSL calculator can be used to calculate PFOA, PFOS, and PFBS human health screening values (i.e., PFAS with toxicity criteria) for surface water based on the recreational scenario.

3 Absence of AOPC-specific existing background monitoring wells

4 Monitoring Well is part of sampling event for AOPCs 6, 7 and 22

5 Sample depth is based on either water level measures from September 19, 2019 (NASA Ames 2020) , or the screen length recorded in the Monitoring Well Atlas (Naval Facilities Engineering Command 2012)

6 Well depth is based on measures recorded in the *Monitoring Well Atlas* (Naval Facilities Engineering Command 2012)

7 No Result: Well is identified as active in the A aquifer in the *Monitoring Well Atlas* . However, neither a recorded water level from prior sampling by NASA, nor a well screen interval is recorded

8 New proposed well would have a depth of 20 ft bgs with a screen interval anywhere from 4.5 to 19.5 ft bgs. Wells will be installed with either a direct-push or hollow-stem auger drill rig. Source of Water for drilling from San Francisco Hetch Hetchy Reservoir

9 A groundwater sample is required. If existing well is not usable, a new well will be installed to a depth of 20 ft bgs with a screen interval anywhere from 4.5 to 19.5 ft bgs

10 Drums for Drill cuttings = maximum 19 wells @ 6inch diameter, and 20 foot depth at@ 7.48 gallon/cf) = 41 drums

11 Well location confirmed during Tetra Tech's January 2020 site visit; however, well cap not removed

Appendix A - ARC Site Investigation Work Plan
Table A-2 - ARC Site Inspection Quality Assurance / Quality Control Detail

QA/QC Sample[1]	Matrix	Sample Name	Number of Samples	Analysis	Rationale
None	Soil	A-AOPCXX-SBXX-DUP MMDDYYYY	None	None	None, as duplicates for discrete soil samples area not reliably replicable
Field Duplicate (Dup) versus Samples (Ratio of 1:10)	Groundwater, Surface water, and influent/effluent	A-AOPCXX-WXX-DUP MMDDYYYY	9	PFAS[2]	Assess field and analytical precision.
Equipment Rinsate Blanks (ERB) (Ratio 1 sample per 20 samples)	Water	A-AOPCXX-ERBXX-MMDDYYYY	5	PFAS2	Assess decontamination procedures and potential for cross-contamination from reusable equipment.
Field Blank (FB) (Ratio of 1 per day of sampling for 19 days)	water	A-FBXX-MMDDYYYY	19 (estimated)		Assess potential ambient contaminations in the field or potential cross-contamination as a result of sample handling.
Matrix Spike and Matrix Spike Duplicate (MS/MSD) (Ratio 1 MS/MSD per sample group, typically a group is a sample shipment per laboratory per day. Assuming one laboratory, then 1 MS/MSD per day.)	Soil	A-MS/MSDXX-MMDDYYYY	3 (estimated)	PFAS[2]	Assess accuracy and bias caused by sample matrix.
	Groundwater	A- MS/MSDXX-MMDDYYYY	19 (estimated)	PFAS[2]	
Source Water Blanks (SWB) (Ratio - 1 sample per event)	Water	A- AOPCXX-SWBXX-MMDDYYYY	1	PFAS[2]	Assess potential for cross-contamination from water used for decontamination.

Notes:

1. PFAS-free water for equipment blanks, field blanks, and drilling and sampling equipment decontamination will be provided by the laboratory or an on-site source. If provided by an on-site source, the source will be sampled for PFAS by LC/MS/MS compliant with QSM Table B-15 of QSM 5.3 or later prior to use to confirm lack of detectable PFAS compounds. The PFAS analytes reported should be the combination of those listed in the EPA Method 537.1 and those listed for Department of Defense QSM. With the exception that N-methylperfluorooctanesulfonamide (CAS No. 31506-32-8) will not be analyzed.

2 - Method should be compliant with Table B-15 of the Department of Defense Quality Systems Manual (QSM) version 5.3 or later. The PFAS analytes reported should be the combination of those listed in the EPA Method 537.1 and those listed for Department of Defense QSM. With the exception that N-methylperfluorooctanesulfonamide (CAS No. 31506-32-8) will not be analyzed.

Abbreviations:

A- Sample from NASA Ames Research Center

A-AOPC - NASA Ames Research Center (A) Area of potential concern (AOPC).

DUP - Duplicate.

ERB -Equipment Rinsate Blanks

FB - Field Blank

LC/MS/MS - liquid chromatography tandem mass spectrometry.

MS/MSD - Matrix Spike and Matrix Spike Duplicate

MMDDYYYY - Data of sample representing month, day, year.

SB - Soil Boring

SWB - Source Water Blank

PFAS - per- and polyfluoroalkyl substances.

QA/QC - quality assurance/quality control.

TBD - to be determined in the field.

W - Groundwater, Surface water, or influent/effluent

XX - Sample number to be designated beginning with 01.

APPENDIX B
PREVIOUS PFAS SAMPLING RESULTS

March 18, 2019

Vista Work Order No. 1900422

Ms. Marcia Christlieb
Earth Resources Technology, Inc.
NASA Ames Research Center, Bldg T20-G, Room 132
Moffett Field, CA 94035-1000

Dear Ms. Christlieb,

Enclosed are the results for the sample set received at Vista Analytical Laboratory on March 08, 2019 under your Project Name 'Marriage Road Ditch South / 3602-28A Stormwater'.

Vista Analytical Laboratory is committed to serving you effectively. If you require additional information, please contact me at 916-673-1520 or by email at mmaier@vista-analytical.com.

Thank you for choosing Vista as part of your analytical support team.

Sincerely,

Martha Maier
Laboratory Director

Vista Analytical Laboratory certifies that the report herein meets all the requirements set forth by NELAP for those applicable test methods. Results relate only to the samples as received by the laboratory. This report should not be reproduced except in full without the written approval of Vista.

Vista Work Order No. 1900422
Case Narrative

Sample Condition on Receipt:

One water sample was received in good condition and within the method temperature requirements. The sample was received and stored securely in accordance with Vista standard operating procedures and EPA methodology.

Analytical Notes:

PFAS Isotope Dilution Method

The sample was extracted and analyzed for a selected list of PFAS using the PFAS Isotope Dilution Method (Modified EPA Method 537). The results for PFHxS, PFOA, and PFOS include both linear and branched isomers. Results for all other analytes include the linear isomers only.

Holding Times

The sample was extracted and analyzed within the method hold times.

Quality Control

The Initial Calibration and Continuing Calibration Verifications met the method acceptance criteria.

A Method Blank and Ongoing Precision and Recovery (OPR) sample were extracted and analyzed with the preparation batch. No analytes were detected in the Method Blank. The OPR recoveries were within the method acceptance criteria.

The labeled standard recoveries for all QC and field samples were within the acceptance criteria.

DATA QUALIFIERS & ABBREVIATIONS

B	This compound was also detected in the method blank
Conc.	Concentration
D	Dilution
DL	Detection limit
E	The associated compound concentration exceeded the calibration range of the instrument
H	Recovery and/or RPD was outside laboratory acceptance limits
I	Chemical Interference
J	The amount detected is below the Reporting Limit/LOQ
LOD	Limits of Detection
LOQ	Limits of Quantitation
M	Estimated Maximum Possible Concentration (CA Region 2 projects only)
NA	Not applicable
ND	Not Detected
P	The reported concentration may include contribution from chlorinated diphenyl ether(s).
Q	The ion transition ratio is outside of the acceptance criteria.
TEQ	Toxic Equivalency
U	Not Detected (specific projects only)
*	See Cover Letter

Unless otherwise noted, solid sample results are reported in dry weight. Tissue samples are reported in wet weight.

Vista Work Order No. 1903386

Mr. Jeff Linder
Earth Resources Technology, Inc.
NASA Ames Research Center, Bldg T20-G, Room 132
Moffett Field, CA 94035-1000

Dear Mr. Linder,

Enclosed are the results for the sample set received at Vista Analytical Laboratory on September 28, 2019 under your Project Name 'NASA RGRP'.

Vista Analytical Laboratory is committed to serving you effectively. If you require additional information, please contact me at 916-673-1520 or by email at mmaier@vista-analytical.com.

Thank you for choosing Vista as part of your analytical support team.

Sincerely,

Martha Maier
Laboratory Director

Vista Analytical Laboratory certifies that the report herein meets all the requirements set forth by NELAP for those applicable test methods. Results relate only to the samples as received by the laboratory. This report should not be reproduced except in full without the written approval of Vista.

Vista Work Order No. 1903386
Case Narrative

Sample Condition on Receipt:

Two groundwater and two aqueous samples were received in good condition and within the method temperature requirements. The samples were received and stored securely in accordance with Vista standard operating procedures and EPA methodology.

Analytical Notes:

PFAS Isotope Dilution Method

Samples "W12-20" and "W12-6" contained particulate and were centrifuged prior to extraction.

The samples were extracted and analyzed for a selected list of PFAS using the PFAS Isotope Dilution Method. The results for PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Results for all other analytes include the linear isomers only.

Holding Times

The samples were extracted and analyzed within the method hold times.

Quality Control

The Initial Calibration and Continuing Calibration Verifications met the acceptance criteria.

A Method Blank and Ongoing Precision and Recovery (OPR) sample were extracted and analyzed with the preparation batch. No analytes were detected in the Method Blank above the Reporting Limit. The OPR recoveries were within the method acceptance criteria.

The internal standard recoveries outside the acceptance criteria are listed in the table below.

QC Anomalies

LabNumber	SampleName	Analysis	Analyte	Flag	%Rec
1903386-01	W12-20	PFAS Isotope Dilution Method	13C3-PFBA	H	53.5
1903386-01	W12-20	PFAS Isotope Dilution Method	13C3-PFBS	H	183
1903386-01	W12-20	PFAS Isotope Dilution Method	13C2-4:2 FTS	H	275

RL - Reporting limit

Results reported to RL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

RL - Reporting limit

Results reported to RL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

DATA QUALIFIERS & ABBREVIATIONS

B	This compound was also detected in the method blank
Conc.	Concentration
D	Dilution
DL	Detection limit
E	The associated compound concentration exceeded the calibration range of the instrument
H	Recovery and/or RPD was outside laboratory acceptance limits
I	Chemical Interference
J	The amount detected is below the Reporting Limit/LOQ
LOD	Limits of Detection
LOQ	Limits of Quantitation
M	Estimated Maximum Possible Concentration (CA Region 2 projects only)
NA	Not applicable
ND	Not Detected
P	The reported concentration may include contribution from chlorinated diphenyl ether(s).
Q	The ion transition ratio is outside of the acceptance criteria.
TEQ	Toxic Equivalency
U	Not Detected (specific projects only)
*	See Cover Letter

Unless otherwise noted, solid sample results are reported in dry weight. Tissue samples are reported in wet weight.

1.0 PURPOSE

This Standard Operating Procedure (SOP) describes the methods and protocols to be used for collecting and handling samples to be analyzed for polyfluoroalkyl and perfluoroalkyl substances (PFAS). PFAS are present in many consumer products including some typical sampling equipment and are widely present in the environment.

Low regulatory criteria and high contamination potential require special precautions to be implemented to avoid compromising sample integrity. Instructions are provided herein for collection of environmental samples without contaminating them. This SOP is designed to supplement but not replace existing sampling SOPs SA-1.1, SA-1.2, SA-1.3, SA-1.7, and SA-5.1. In addition, some clients and/or projects may have specific PFAS-related sampling requirements that extend beyond the procedures described in this SOP. Such additional requirements typically are documented in work plans or similar documents.

2.0 SCOPE AND APPLICABILITY

This document provides information on selection of proper sampling equipment and techniques for groundwater, surface water, sediment, soil, and water supply sampling for PFAS analysis. Sampling of air or biota is not addressed in this SOP, but the same principles would apply for those media.

3.0 BACKGROUND

PFAS have been used since the 1940s as manufacturer-applied oil and water repellants on products such as clothing, upholstery, paper, and carpets and in making fluoropolymers for non-stick cookware. They are found in textiles and leather products, mist suppressants for metal plating, materials used in the photography industry, photolithography, semi-conductors, paper and packaging, coatings, cleaning products, pesticides, and cosmetics. They have been used in well-known consumer products including Teflon, StainMaster, Scotchgard, and GoreTex. In the 1960s, aqueous film-forming foam (AFFF) containing PFASs was developed for fighting flammable liquid fires, particularly petroleum-fueled (Class B) fires (ATSDR, 2009). The two most researched and most prevalent PFAS in the environment are perfluorooctane sulfonate (PFOS) and perfluorooctanoic acid (PFOA) (ATSDR, 2009).

Military uses of PFAS have been primarily related to fire fighting and electroplating. AFFF meeting MIL-F-24385 specifications was developed by various manufacturers for use in extinguishing fires at military bases, airports, commercial facilities, and fire-fighting training facilities throughout the United States. Beginning in the late 1960s the United States Department of Defense (DoD) used large quantities of AFFF for shipboard and shore facility fire-suppression systems, on fire-fighting vehicles, and at fire-training facilities. AFFF concentrate that contains PFAS may still be in use at DoD facilities, and large quantities of AFFF may have been released to the environment at some facilities.

PFAS are persistent in the environment, tend to bioaccumulate, and demonstrate toxicity in laboratory animals, enough to raise concerns about their presence in the environment. Some areas where PFAS may have been released to the environment include the following:

- Fire-fighting training areas
- Areas where fire-fighting products/materials are stored
- Aircraft crash sites
- Metal coating and plating facilities
- Water treatment systems and receiving water bodies
- Airport hangars and other facilities storing fire-fighting foams
- Fluorochemical manufacturing, use, and disposal facilities

PFAS are ubiquitous in consumer products and are present in or on some materials used in environmental sampling (e.g., Teflon tubing, waterproof logbooks, and GoreTex field clothing). Laboratory detection limits are low for PFAS, and contact of sample material or sampling equipment with any one of the multitude of PFAS sources could result in detectable contamination. In addition, PFAS tend to adsorb to glass and some plastics, so certain glass or plastic sample collection containers are inappropriate for use in PFAS sample collection. Adsorption to sample containers may result in a low bias for measured PFAS concentrations.

Collection and analysis of quality control blanks is an important aspect of verifying that samples have not been contaminated during sample collection and handling. Use of additional blanks or blanks of a different type than usual may be required in some circumstances, and the governing project planning documents should be consulted. Consult Section 7.7 of this SOP for instructions regarding collection of field reagent blanks (FRBs).

4.0 DEFINITIONS AND ABBREVIATIONS

AFFF – Aqueous film-forming foam.

Emerging Contaminant – An emerging contaminant is a chemical or material that is characterized by a perceived, potential, or real threat to human health or the environment or by a lack of published health standards (U.S. EPA, 2014). A contaminant may also be "emerging" because a new source or a new pathway for human exposure has been discovered or a new detection method or treatment technology has been developed (DoD, 2011).

FRB – Field Reagent Blank. A blank sample prepared in the field by transferring laboratory-supplied, chemically preserved, deionized water to an empty, laboratory-supplied, collection bottle. FRBs are typically analyzed only for PFAS and are treated as site samples in all respects, including shipment to the sampling site, exposure to sampling site conditions, storage, preservation, and all PFAS analytical procedures. The purpose of FRBs is to indicate whether PFAS measured in corresponding site samples may have been introduced during sample collection and handling.

PFAS – Per- and Polyfluoroalkyl Substances. A reference term currently in use, replacing "PFCs" in recent scientific and other technical literature. The term is inclusive of both perfluorinated chemicals like PFOA and PFOS and polyfluoroalkyl substances like fluorinated telomers.

PFCs – Perfluorinated Compounds or Chemicals. PFCs are a family of man-made chemicals that have been used for commercial, industrial, and military applications because they resist thermal degradation and repel oil, stains, grease, and water.

PFOA – Perfluorooctanoic Acid. PFOA is used as an aqueous dispersion agent and in the manufacture of fluoropolymers (including Teflon) used in industrial components such as electrical wire casings, fire- and chemical-resistant tubing, and plumbing seal tape. PFOA is used in surface treatment products to impart oil, stain, grease, and water resistance. PFOA can also be produced by the breakdown of some fluorinated telomers.

PFOS – Perfluorooctane Sulfonate. PFOS was a key ingredient in Scotchgard and used in the manufacture of Class B AFFF used per DoD military specifications. Phase out of AFFF by 3M occurred in 2002.

5.0 SAFETY PRECAUTIONS

Sample acquisition activities shall be conducted in accordance health and safety requirements identified in the project-specific Health and Safety Plan (HASP), Accident Prevention Plan (APP), and corporate health and safety policies. Alteration may be necessary to allow sample collection without cross contamination as dictated by site-specific conditions.

Caution

The use of personal protective equipment (PPE) containing PFAS (e.g., some insect repellants, sunscreens, traffic safety vests, etc.) should be avoided if possible or, if deemed necessary to control hazards, should be carefully considered as they can pose a potential cross-contamination risk for samples. Extra care (e.g., changing outer gloves) must be exercised to ensure that PFAS is not transferred directly or indirectly from PPE to samples or sample containers.

The Tetra Tech Project Manager (PM), in coordination with the Tetra Tech NUS Operating Unit Health and Safety Group, shall ensure that the development of project-specific plans balances the need to control exposure to safety hazards as well as address PFAS contamination risks.

6.0 PERSONNEL RESPONSIBILITIES, QUALIFICATIONS, AND TRAINING

Project Manager (PM) – The PM along with the management team are responsible for determining sampling objectives, initial sampling locations, and field procedures used in the collection of samples of environmental media. Additionally, in consultation with other project personnel (geologist, hydrogeologist, etc.), the PM is responsible for selecting and detailing the specific sampling techniques and equipment to be used and for providing detailed input in this regard to the project planning documents. The PM has the overall responsibility for ensuring that sampling activities are properly conducted by appropriately trained staff.

Site Safety and Health Officer (SSHO) – The SSHO (or a qualified designee) is responsible for providing the technical support necessary to implement the project HASP, APP, or equivalent. The SSHO or SSHO designee may also be required to advise the Field Operations Leader (FOL) on safety-related matters regarding sampling, such as measures to mitigate potential hazards, hazardous objects, or conditions.

Project Geologist/Sampler – The project geologist/sampler is responsible for proper acquisition of samples in accordance with this SOP or other project-specific documents. In addition, this individual is responsible for the completion of all required paperwork (e.g., sample log sheets, field notebook, boring logs, container labels, custody seals, and chain-of-custody forms) associated with the collection of those samples.

Field Operations Leader (FOL) – This individual is primarily responsible for the execution of the field sampling program in accordance with the project planning documents. This is accomplished through management of a field sampling team for the proper acquisition of samples.

Personnel implementing this SOP must read and understand this SOP prior to collection of samples designated for PFAS analysis.

7.0 PROCEDURES

The following sampling procedure establishes requirements for collection of samples designated for PFAS analysis while minimizing potential cross contamination of the samples and other materials.

7.1 Selection of Equipment

It is important to research available equipment and materials at the project planning stage to avoid last-minute problems in the field, for example, ensuring compatibility of high-density polyethylene (HDPE) tubing with fittings for use in a peristaltic or other pump, or ensuring that equipment (e.g., a bladder pump) does not contain Teflon.

Sampling Equipment:

Note: PFAS cross-contamination of samples can be minimized through decontamination or conditioning of equipment left in a well. Use of dedicated equipment also is helpful so that handling during decontamination is unnecessary.

- Decontamination – All reusable equipment used in sample acquisition should be adequately decontaminated prior to use.

- Unless project requirements indicate otherwise, use sampling equipment made of stainless steel, acetate, silicone, or HDPE. This applies to tubing, pumps and pump components, tape for plumbing fittings, trowels, mixing bowls, or other equipment that could contact the sample media. Gasket and O-ring components of sampling equipment may also contain fluoropolymers.

Note: PFAS on purchased or rented items is likely to occur predominantly in newly manufactured or rented items treated with chemicals containing PFAS. Therefore, all rental equipment that will make direct contact with the material being sampled must be thoroughly decontaminated prior to use, especially if the equipment items are new.

- Use sampling equipment that does not include or containing polytetrafluoroethylene (PTFE) or Teflon (DuPont brand name) or fluorinated ethylene propylene (FEP) during sample handling or mobilization/demobilization.

- Use products that are not made of low-density polyethylene products (LDPE) if contamination from those products can be transferred to environmental samples or QC samples.

- For collecting drinking water samples to be analyzed using United States Environmental Protection Agency (U.S. EPA) Method 537, use polypropylene sample bottles with a polypropylene screw cap; for all other samples, use HDPE containers with unlined plastic screw caps.

Non-Sampling Field Equipment:

- Non-waterproof loose-leaf paper or notebooks are acceptable. Avoid using waterproof field books or paper during sampling activities, although "Rite in the Rain" books have been found empirically to be acceptable. Do not use plastic clipboards, binders, or spiral hard-cover notebooks that may be coated; use Masonite or aluminum clipboards instead.

- Avoid using Post-it notes or similar removable notes during sample handling or mobilization/demobilization activities.

- Use ballpoint pens or pencils for note taking and sample bottle labeling. Avoid using Sharpies or similar indelible markers.

- Avoid the use of aluminum foil.

Field Personnel Clothing and Protective Gear:

- Wear clothing that has been washed at least six times without fabric softener to remove possible stain-resistant coatings. Clothing made of natural fibers such as cotton is preferred to other fabrics. Protective clothing must be washed in accordance with manufacturer recommendations to ensure that the protective properties necessary to control safety hazards (e.g., fire-retardant clothing) are not compromised.

- Avoid unnecessary contact with upholstery in vehicles because many such fabrics may be treated with stain-resistant materials that could contain PFAS. Typically, rental vehicles are newer and more likely to pose a contamination risk to samples. Well-washed towels or rags may be placed on the seats to prevent contact with car seats and other materials that could transfer PFAS to clothing worn by samplers. If practical, cover clothing and skin that has been in contact with such upholstery with non-fluorinated clothing.

- During wet weather, use rain gear made from polyurethane or wax-coated materials.

- Avoid wearing water-resistant (e.g., Gore-Tex or similar material) clothing or footwear (e.g., boots) immediately prior to or during sample collection and management.

- Avoid wearing coated Tyvek or similar coated PPE suits.

- Wear un-powdered nitrile gloves at all times while collecting and handling samples, and change gloves often. Anecdotal evidence indicates that changing gloves is one of the most effective methods of reducing or eliminating sample contamination potential; therefore, change to a new pair of gloves prior to collecting each sample.

- Avoid wearing cosmetics, shampoos, moisturizers, hand cream, or other similar personal care products on the day of sampling.

- When expected to be effective, use sunscreens and insect repellants that are made with 100-percent natural ingredients and that the Air Force Civil Engineer Center has identified as acceptable for use. ***These products must be used in accordance with manufacturer recommendations and in combination with controls in the project-specific HASP, APP, and corporate health and safety policies. Multiple applications of these products per work shift may be required to ensure their effectiveness.***

    - Sunscreens: Alba Organics Natural Sunscreen, Yes To Cucumbers, Aubrey Organics, Jason Natural Sun Block, Kiss My Face, baby sunscreens that are “free” or “natural.”

    - Sunscreen and insect repellant: Avon Skin So Soft Bug Guard Plus – SPF 30 Lotion

    - Insect Repellent: Jason Natural Quit Bugging Me, Repel Lemon Eucalyptus Insect Repellant, Herbal Armor, California Baby Natural Bug Spray, BabyGanics.

Note: The suitability of these items has not been independently verified. Products containing N-diethyl-meta-toluamide **(**DEET), picaridin, and IR3535 and some oil of lemon eucalyptus (OLE) and para-menthane-diol products are known to provide longer-lasting protection than others. One of the products recommended by the Air Force Civil Engineer Center and listed above, Repel Lemon Eucalyptus Insect Repellant, contains OLE and is most likely to be effective.

Sample Containers and Shipping Materials:

- Avoid the use of glass sample containers, which are believed to result in loss of PFAS through adsorption to the container inner walls.
- Collect samples in clean, laboratory-supplied, plastic bottles only, typically polypropylene for drinking water or HDPE for other matrices.
- Confirm that Teflon-lined caps are not used in sample containers; unlined polypropylene screw caps must be used. It is best to segregate sample containers with Teflon components (e.g., Teflon-lined septa) from PFAS sample containers.
- Avoid using Blue Ice or similar items to cool samples and avoid placing such items in sample coolers for shipping. Use commercially available (e.g., from convenience stores or supermarkets) double-bagged ice instead.

Caution: Samples designated for PFAS analysis must be cooled to achieve a storage temperature of less than 6 °C. Cooling to this temperature may take several hours, and sample temperatures may not achieve 6 °C by the time they arrive at the laboratory. If sample temperatures upon arrival at the laboratory are not less than 10 °C, the laboratory may conclude that sample preservation was compromised and may reject the samples. Therefore, place samples on ice as soon after collection as possible. On warm days, or when a representative from a nearby laboratory picks up the samples, take extra care (e.g., use more ice or delay shipment, if necessary) to ensure that sample temperatures will not exceed 10 °C when the samples arrive at the laboratory.

- Use of commercially available plastic bags (e.g., 3-mil-thick trash can liners) for lining coolers to prevent leakage and to separate potential melt water from chain-of-custody forms is allowed.

7.2 Other Precautions for Sample Handling

- Wash hands thoroughly before sampling and after handling fast food, carryout food, snacks, or other items that may contain PFAS. Do not carry pre-packaged food items such as candy bars or microwave popcorn into sampling areas.
- Assume that shipping tape used for securing coolers could contain PFAS; therefore, take care not to transfer PFAS from tape to samples.
- Minimize exposure of samples to light. This can be done by placing the collected samples into a cooler (with ice) and closing the cooler lid.
- If in doubt about a particular product or item that comes into contact with environmental media to be sampled or is in close proximity to sampling operations, consider collecting and analyzing a rinsate blank using laboratory-supplied PFAS-free water to test the item for contamination potential. Consult the Tetra Tech PM in these cases to verify whether collection of additional blanks is warranted.
- Support personnel that are within 2 to 3 meters of the sample processing area are considered subject to the same restrictions related to precautionary measures for clothing and food as applied to sampling personnel.

These precautions must be observed during sampling activities, especially during water sample collection (groundwater, water supply, and surface water), given the high solubilities of PFAS in water. Examples of

how these precautions may be applied to sampling of specific media are provided in the following sections.

7.3 Groundwater Sample Acquisition

The precautions and requirements identified in Sections 7.1 and 7.2 must be observed for groundwater sampling. Do not proceed any further without reviewing each of those precautions and requirements.

- Collect groundwater samples for PFAS analyses in accordance with this SOP, SOP SA-1.1, and/or project- or client-specific requirements.

- If non-dedicated non-disposable equipment is used between sampling locations, it should be decontaminated with Alconox or Liquinox, unless 1,4-dioxane (a potential component of Liquinox) is also a contaminant of concern. In that case, Liquinox should not be used. Products such as Decon 90, which contains fluorosurfactants, should not be used. Alconox or Liquinox rinses should be followed by a potable water rinse then deionized water rinse.

- If Teflon or LDPE materials are required for the non-PFAS analytes, use multiple sets of containers. Collect samples for PFAS analysis last to ensure adequate purging and conditioning of sampling equipment. If practical to do so, suitable PPE (especially gloves) may also be changed out for PFAS sampling. For example, purge and sample a monitoring well for volatile organic compounds (VOCs), semivolatile organic compounds (SVOCs), and metals using a peristaltic pump with HDPE and silicone tubing, then collect the material for PFAS analysis or switch to a stainless steel bailer to collect the PFAS samples. If either the proper sampling sequence or proper equipment is unclear, consult the FOL or Tetra Tech PM and record the actual sequence in the field notes.

- If sampling wells that have or had dedicated Teflon or FEP tubing that potentially contained PFAS, remove the dedicated tubing and, using silicone or HDPE tubing, remove at least one well volume from the target sampling interval prior to sampling. Accomplish this removal in a manner that is rigorous enough to remove the entire water column from the well and not just a limited vertical interval of the water column. This will minimize the potential for collecting a sample that was in contact with the Teflon/FEP tubing.

- The use of detergents must be avoided during decontamination of drilling equipment. All equipment must be scrubbed with a plastic brush or steam cleaned and rinsed thoroughly in potable water to clean away any debris or material on exposed surfaces and then triple-rinsed in distilled (American Society for Testing and Materials Grade 3 or better) or deionized water (or Millipore water).

- Sample(s) representing any water collected at the point of use (e.g., water truck or tank on site) used by the driller for drilling purposes must be analyzed for PFAS. See Section 7.8 for guidance on waste management.

- Collect drinking water samples to be analyzed using U.S. EPA Method 537 in clean polypropylene sample bottles with a polypropylene screw cap; for all other samples, use clean, laboratory-supplied, HDPE bottles with unlined plastic screw caps.

7.4 Soil Sample Acquisition

The precautions and requirements identified in Sections 7.1 and 7.2 must be observed for soil sampling. Do not proceed any further without reviewing each of those precautions and requirements.

- Collect soil samples for PFAS analyses in accordance with this SOP, SOP SA-1.3, and/or project- or client-specific requirements. Review client–specific (e.g., DoD component) guidance or previously approved Sampling and Analysis Plans (SAPs).

- Soil sampling equipment should not be constructed of or contain Teflon or other materials likely to contain or be coated with PFAS. Acceptable materials for sampling include stainless steel, acetate, and HDPE.

- If non-dedicated non-disposable equipment is used between sampling locations, it should be decontaminated with Alconox or Liquinox, unless 1,4-dioxane (a potential component of Liquinox) is also a contaminant of concern. In that case, Liquinox should not be used. Products such as Decon 90, which contains fluorosurfactants, should not be used. Alconox or Liquinox rinses should be followed by a potable water rinse then deionized water rinse.

- Collect samples in laboratory-provided HDPE containers specifically designated for PFAS analysis. Do not use glass jars typically used for soil sample collection because some PFAS may irreversibly adsorb to the glass and could create a negative bias in the measured PFAS concentrations. Also consult Section 7.6 if sampling a water supply.

7.5 Surface Water and Sediment Sample Acquisition

The precautions and requirements identified in Sections 7.1 and 7.2 must be observed for surface water and sediment sampling. Do not proceed any further without reviewing each of those precautions and requirements.

- Collect surface water and sediment samples for PFAS analysis in accordance with this SOP, SOP SA-1.2, and/or project- or client-specific requirements.

- Surface water and sediment sampling equipment should not be constructed of or contain Teflon or LDPE materials. Acceptable materials for sampling include HDPE, small amounts of silicone, stainless steel, and acetate. Do not use glass. The bottleware should be supplied clean by the laboratory and specifically designated for PFAS analysis. If transfer bottles are required for collection of surface water samples, the transfer bottles used should be of the same material as the containers designated for submission to the laboratory.

- For surface water sample collection, invert the capped sample bottle, with the opening pointing downward, at least 10 cm below the water surface, 10 cm above the bottom of the water body, and as close to the center of the channel or water body as practical. To collect the sample, uncap the bottle underneath the water surface and point the bottle upward so that gloved hands, sample container, and sampler are downstream of where the sample is being collected.

- For aquatic samples collected from the shoreline or via wading, ensure that waders are constructed of fabric that has not been treated with waterproofing coatings.

- If non-dedicated non-disposable sampling equipment is used between sampling locations, it should be decontaminated with Alconox or Liquinox, unless 1,4-dioxane (a potential component of Liquinox) is also a contaminant of concern. In that case, Liquinox should not be used. Products such as Decon 90, which contains fluorosurfactants, also should not be used. Alconox or Liquinox rinses should be followed by a potable water rinse then deionized water rinse.

7.6 Water Supply Sampling

This section applies to sampling from taps, spigots, faucets, or similar devices for PFAS analysis. The precautions and requirements identified in Sections 7.1 and 7.2 must be observed for water supply sampling. Do not proceed any further without reviewing each of those precautions and requirements.

- Collect water supply samples for PFAS analysis in accordance with applicable portions of SOP SA-1.7 and/or project- or client-specific requirements.

- Water supply sampling equipment (if needed) should not be constructed of or contain Teflon or LDPE materials. Acceptable materials for sampling include HDPE, polypropylene (drinking water sampling only), small amounts of silicone (e.g., short runs of silicone tubing used in peristaltic pumps), stainless steel, and acetate. Non-drinking water supply samples should be collected in clean, laboratory-supplied, HDPE bottleware specifically designated for PFAS analysis (not glass). Collect drinking water samples in clean polypropylene bottles supplied by the laboratory.

- Ensure that sample bottles used to collect chlorinated water samples contain the proper Trizma preservative (5 g/L to preserve and remove chlorine). Non-chlorinated water does not require chemical preservatives designed to remove chlorine.

- If non-dedicated non-disposable equipment is used between sample locations, it should be decontaminated with Alconox or Liquinox.

- Locate the sampling point. If a specific sampling point has already been designated (e.g., a kitchen tap), plan to collect the sample from that point. Otherwise, identify a location in the water supply line that is as close as possible to the water's point of origination (e.g., a well or other water source) and upstream of any local water treatment unit(s) that could affect PFAS levels (e.g., water softeners, activated carbon, or reverse osmosis treatment units). If a treatment unit is in use, a post-treatment sample may also be required in some cases, per project requirements.

  Note: If treatment that could affect PFAS levels (e.g., carbon filtration or reverse osmosis) is part of the water distribution system, often a spigot will be present in the plumbing line between the water source and the treatment unit, and this spigot should be used for sample collection.

- Remove any aerator/diffuser from the faucet, if possible. If removal is not possible, record this observation in the field notes.

- Allow the water to run freely from the tap until water quality parameter stabilization per project-specific requirements is achieved, or as otherwise required by project-specific requirements. This will often require purging for 3 to 5 minutes.

- Reduce the water flow rate to minimize aeration of the sample. The water stream should be no wider than the diameter of a pencil.

- Fill the sample bottle (typically 250 mL) directly from the tap to the bottom of the neck of the bottle, and cap the bottle immediately.

- After collecting the sample, cap the bottle and, if preservative is included, agitate by hand until the preservative is dissolved.

- Do not use filters when collecting samples because the filters may introduce PFAS contamination or absorb PFAS and thus reduce PFAS concentrations in the samples.

7.7 Field Reagent Blank Collection

Note: If PFAS are detected in site samples, FRBs may be analyzed to assess whether PFAS in site samples could be non-site-related contamination and whether resampling is necessary. U.S. EPA Method 537 and modifications thereof for PFAS analysis require an FRB to be handled along with each sample set. A sample set is described as samples collected from the same sample site and at the same time, but "sample site" and "same time" are not precisely defined. Therefore, it is important to verify that the correct number of FRBs will be collected. The intent is to be able to verify whether samples have been contaminated and to help identify the source of contamination. In general, collecting one FRB at each sampling point is recommended when sampling drinking water; fewer FRBs are recommended when sampling non-drinking water matrices. The actual number will depend on project needs. *Collection of an FRB at every sampling point may be required.*

- Verify the number of FRBs to be collected for the project and where those samples must be collected. This should be described in the project planning documents such as work plans or SAPs. If it is not, consult the PM.

- At the sampling site, when ready to collect an FRB, open the bottle of chemically preserved FRB reagent water provided by the laboratory and a corresponding clean empty bottle, also provided by the laboratory.

- Pour the preserved FRB reagent water into the empty sample bottle, close the cap, and label this filled bottle as the FRB.

- Pack and ship the FRB along with site samples and required documentation (e.g., chain-of-custody form) to the laboratory.

Note: Although chain-of-custody forms will indicate that FRBs must be analyzed for PFAS, analysis of an FRB will be required only if site samples contain PFAS greater than a certain concentration. If an FRB is analyzed and any PFAS concentration in the FRB exceeds one-third of the laboratory minimum reporting limit (or equivalent), all samples collected with that FRB may be considered invalid and may require recollection and reanalysis. Consult the project planning documents governing sample collection for specifics as to whether resampling is necessary. Care in collection and handling of site samples and FRBs in a way that avoids contamination cannot be overemphasized.

Note: It will be necessary to associate individual FRBs with corresponding site samples; otherwise, decisions about which samples to recollect (if recollection is indicated) could be compromised. Associations between FRBs and corresponding site samples may be accomplished by marking chain-of-custody forms with the associations, but other methods also may be useful. Consult the governing planning document or the PM for guidance, if necessary.

7.8 Disposal of Investigation-Derived Waste Potentially Containing PFAS

PFAS are not hazardous wastes as defined in the Resource Conservation and Recovery Act and Comprehensive Environmental Response, Compensation, and Liability Act. It may be possible to dispose of PFAS-containing solid waste as non-hazardous, but sampling solid waste material for PFAS analysis is not advised. Consult the client PM or on-site point of contact to verify their current disposal acceptance criteria, and indicate on waste manifests that the waste potentially contains PFAS. Waste water potentially containing PFAS should be analyzed for PFAS to determine the appropriate disposal option. If the sum of PFOS and PFOA concentrations is less than 70 µg/L the water may be disposed of without special handling if no other enforceable regulations apply; otherwise, the water should be treated to reduce the PFOA + PFOS concentration to an acceptable level or should be directed to an appropriate

treatment facility for disposal. On-site treatment (e.g., granular activated carbon filtration) may be appropriate. Consult the client PM or on-site point of contact for direction regarding disposal.

Note: If aqueous investigation-derived waste (IDW) is expected to contain much greater than 70 ng/L (e.g., captured residual from an accidental release in a hangar), special actions may be necessary and the client PM should be consulted. For wastes that are dewatered and potentially contain PFAS, containerize the waste water and analyze it for PFAS prior to disposal.

MONITORING WELL SAMPLING FORM

Date/Time of Sample Collection: 7/29 / 1525 Project Site/Subsite: NASA AMES / AOPC2

Well ID: PFAS-F Sample ID: AOPC2-PFAS-F-072921

Depth to Water Level: 7.95 ft below top of casing prior to sampling, 8.01 after sampling

Depth to Well Bottom: 25.00 ft. below top of casing

Method of Purging: (Bladder Pump) Peristaltic Pump

Well Diameter: (2 inch) 4 inch

Total Purged _____ Liters (Max 20 L) Purge Rate goal = 0.15 Liters/Min. Actual purge rate 0.09 Liters/Min

PHYSIO-CHEMICAL PARAMETERS DURING PURGING

Measure-ment Number	Time	Temperature (°C)	pH	ORP (mV)	Specific Conductance (S/m)	Turbidity (NTU)	Dissolved Oxygen (mg/L)	Total Dissolved Solids (g/L)	Salinity (ppt)	Each Volume/ Total Purged (L)
Stabilization Criteria		+/- 3%	+/- 0.1	+/- 20 mV	+/- 3%	+/- 10%, when > 5 NTU	+/- 10% when > 0.5 mg/L	--	--

NOTES

1) HORIZONTAL DATUM: US STATE PLANE 1983, CALIFORNIA ZONE 3.
2) SURVEY DATA BASED UPON THE CONDITION AT THE TIME OF SURVEY PERFORMED BY F3 & ASSOCIATES ON AUGUST 18, 2021.
3) ALL UNITS SHOWN IN US SURVEY FEET AND DECIMALS.
4) ELEVATIONS ARE BASED ON NAVD 1988 VERTICAL DATUM.

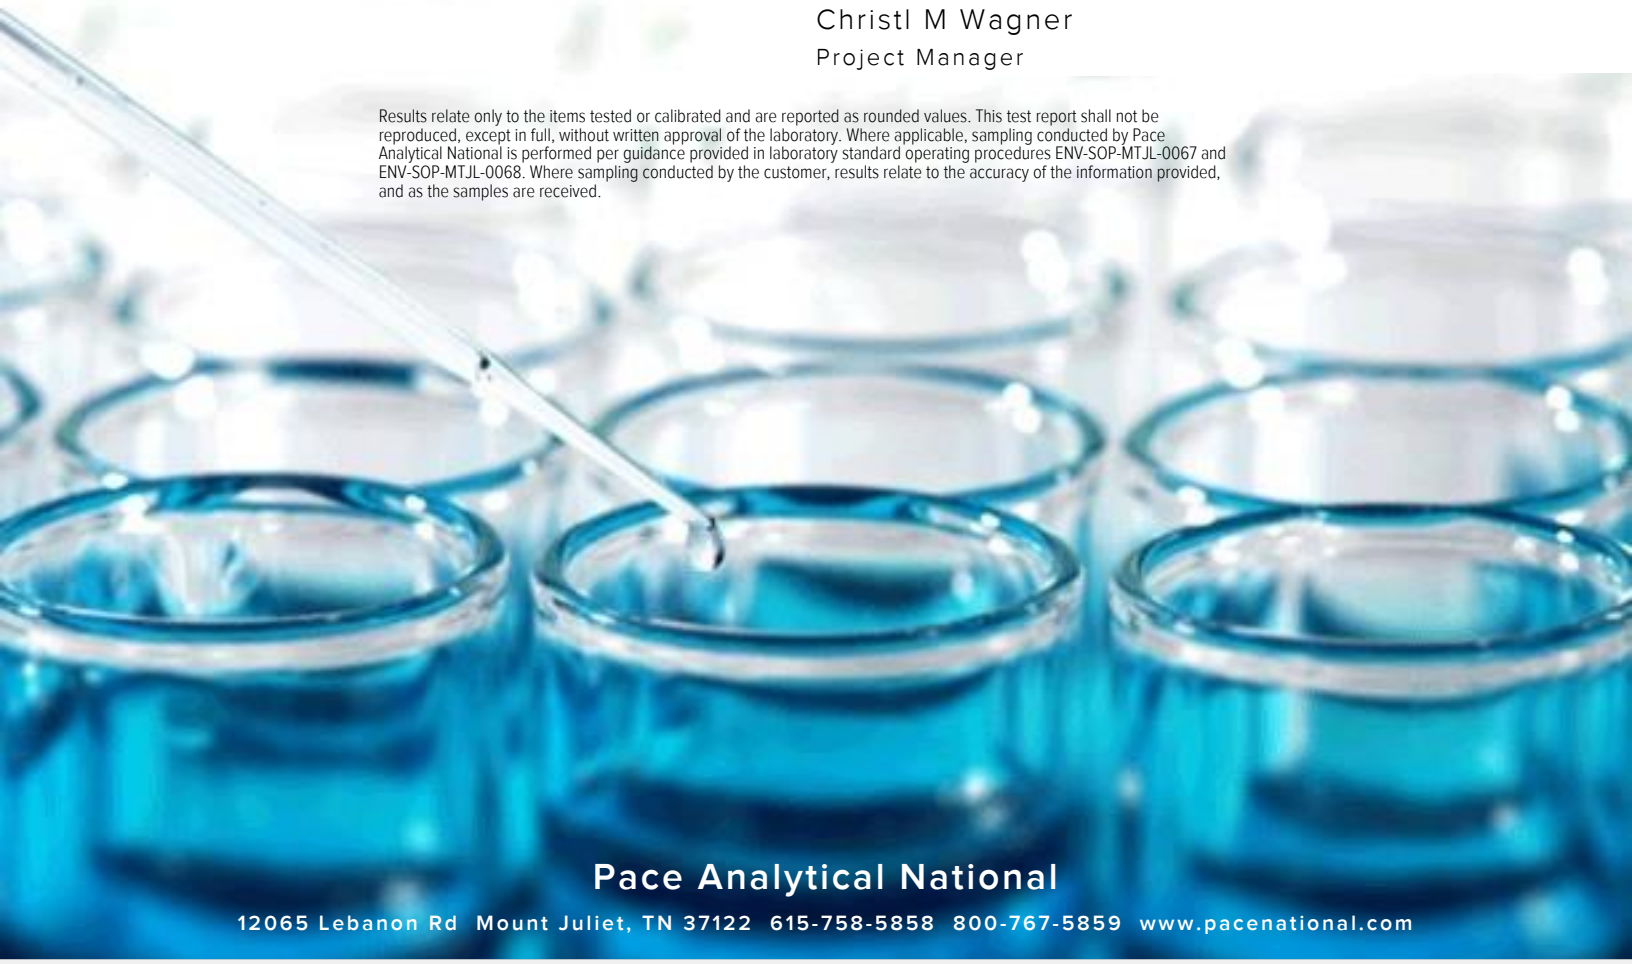
ANALYTICAL REPORT

September 08, 2021



Pace Analytical - West Columbia, SC

Sample Delivery Group:	L1390235
Samples Received:	08/13/2021
Project Number:	WH13098
Description:	NASA ARC
Site:	01
Report To:	Kathy Smith 106 Vantage Point Dr. West Columbia, SC 29172

Entire Report Reviewed By:

Christl M Wagner
Project Manager

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace Analytical National is performed per guidance provided in laboratory standard operating procedures ENV-SOP-MTJL-0067 and ENV-SOP-MTJL-0068. Where sampling conducted by the customer, results relate to the accuracy of the information provided, and as the samples are received.

CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Christl M Wagner

GLOSSARY OF TERMS

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

DL	Detection Limit.
LOD	Limit of Detection.
LOQ	Limit of Quantitation.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
B	The same analyte is found in the associated blank.
C6	The initial calibration verification standard (SSCV) associated with this data responded low.
E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL).
J	The identification of the analyte is acceptable; the reported value is an estimate.
J1	Surrogate recovery limits have been exceeded; values are outside upper control limits.
J2	Surrogate recovery limits have been exceeded; values are outside lower control limits.
J3	The associated batch QC was outside the established quality control range for precision.
J4	The associated batch QC was outside the established quality control range for accuracy.
J5	The sample matrix interfered with the ability to make any accurate determination; spike value is high.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.
P	RPD between the primary and confirmatory analysis exceeded 40%.

GLOSSARY OF TERMS

Qualifier	Description
Q	Sample was prepared and/or analyzed past holding time as defined in the method. Concentrations should be considered minimum values.
T8	Sample(s) received past/too close to holding time expiration.
U	Below Detectable Limits: Indicates that the analyte was not detected.

This chain of custody is considered complete as is since this information is available in the owner laboratory.

ANALYTICAL REPORT

October 20, 2021

Pace Analytical - West Columbia, SC

Sample Delivery Group:	L1416727
Samples Received:	08/10/2021
Project Number:	WH04020
Description:	NASA ARC
Site:	001
Report To:	Kathy Smith 106 Vantage Point Dr. West Columbia, SC 29172

Entire Report Reviewed By:

Nancy McLain
Project Manager

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace Analytical National is performed per guidance provided in laboratory standard operating procedures ENV-SOP-MTJL-0067 and ENV-SOP-MTJL-0068. Where sampling conducted by the customer, results relate to the accuracy of the information provided, and as the samples are received.

CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Nancy McLain

GLOSSARY OF TERMS

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

(dry)	Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils].
DL	Detection Limit.
DL (dry)	Detection Limit.
LOD (dry)	Limit of Detection.
LOD	Limit of Detection.
LOQ	Limit of Quantitation.
LOQ (dry)	Limit of Quantitation.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
J	The identification of the analyte is acceptable; the reported value is an estimate.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.
T8	Sample(s) received past/too close to holding time expiration.
U	Below Detectable Limits: Indicates that the analyte was not detected.

Case Narrative
Tetra Tech
Lot Number: WG10017

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the Pace Quality Assurance Management Plan (QAMP), applicable Shealy standard operating procedures (SOPs), the 2003 NELAC standard, and Shealy policies. Additionally, the DoD QSM version 5.3 has been followed for these samples, and specifically Table B-15 was followed for all PFAS samples. Any exceptions to the QAMP, SOPs, NELAC standards, the DoD QSM, or policies are qualified on the results page or discussed below.

All QC associated with these samples was in compliance with DOD QSM 5.3 table B-15 and our PFAS SOP.

Correction factors (CF) are used to calculate the original sample concentration. The CF is the inverse of the concentration factor (sample volume / extract final volume) times the dilution factor (DF). For undiluted analysis. For undiluted analysis, the extract is prepared for injection by adding 182 uL of sample extract + 8 uL of reagent water + 10 uL of internal standard solution to a polypropylene autosampler vial. An extra correction factor of 0.91 (182 uL / 200 uL = 0.91) applies. The CF is calculated as follows:

CF = DF * FV / Vo

FV is volume of extract (mL)
Vo is initial sample volume (mL)
DF is dilution factor. For undiluted analysis, DF = 1/0.91.

Sample concentration for aqueous samples:
Concentration (ng/L) = Cs*CF,

$$C_s = \frac{\left(\frac{(A_s x C_{is})}{A_{is}}\right) - B}{M1}$$

Where

C_s is on column concentration of target analyte in the sample (ng/L)
C_{is} is concentration of internal standard in the sample (ng/L)
A_s is peak response of target analyte in the sample
A_{is} is peak response of internal standard in the sample
M1 is the average RF from ICAL or the slope from linear regression ICAL
B is the y-intercept from the ICAL

The method blank associated with batch 99118 had PFOA detected at a concentration that was above the MDL but below ½ the PQL. All samples associated with this method blank that have detections for PFOA have been flagged with a "B".

For sample WG10017-003, WG10017-011 sample matrix prevented full volume from being extracted, precluding method mandated bottle rinse. Elution solvent was aliquoted directly into the reservoir, rinsing the inside. Surrogate recovery may be adversely affected.

6:2FTS surrogate recovery for the method blank associated with the following samples was outside the upper control limit: WG10017-001, WG10017-002, WG10017-003, WG10017-004, WG10017-005, WG10017-006, WG10017-007. This method blank did not contain any target analytes; therefore, re-extraction and/or re-analysis was not performed.

Surrogate recovery for the following sample was outside control limits: WG10017-004. Re-extraction (LDUP) and/or re-analysis was performed with concurring results. Both sets of data have been reported.

The continuing calibration verification (CCV) associated with samples WG10017-001, WG10017-002, WG10017-003, WG10017-004, WG10017-005, WG10017-006, WG10017-007 for analyte: GenX recovered above the upper control limit. The sample(s) associated with this CCV were non-detect for the affected analytes; therefore, the data has been reported.

The PFTeDA surrogate in laboratory control sample (LCS) for prep batch 98815 recovered outside acceptance criteria. For the following samples there was an insufficient amount to perform a re-extraction or re-analysis: WG10017-002, WG10017-004. The data has been reported.

Sample WG10017-001, WG10017-020 required centrifugation prior to extraction, due to excessive solids present in the sample. Centrifugation was performed following the PFAS Aqueous Centrifuge Protocol; samples were spiked with Surrogate (SUR; Extracted Internal Standard/EIS) and shaken vigorously before being poured into a conical bottle and centrifuged. The centrifuged aqueous sample was decanted back into the original sample bottle, off of the condensed solids remaining in the centrifuge bottle. Original sample bottle was rinsed as normal and centrifuge bottle was rinsed with 4mL of MeOH. Centrifuge bottle rinsate was added to the elution. Sample concentrated to <10mL and reconstituted to 10mL using MeOH by transfer pipet.

Surrogate recovery for the following sample was outside control limits: WG10017-003, WG10017-014. Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Surrogate recovery for the following sample was outside the upper control limit: WG10017-013. This sample did not contain any target analytes; therefore, re-extraction and/or re-analysis was not performed.

LOQ = Limit of Quantitation
U = Not detected at or above the LOQ
H = Out of holding time
B = Detected in the method blank
N = Recovery is out of criteria
W = Reported on wet weight basis
E = Quantitation of compound exceeded the calibration range
P = The RPD between two GC columns exceeds 40%
LOD = Limit of Detection
DL = Detection Limit
J = Estimated result < LOQ and ≥ DL
Q = Surrogate failure
L = LCS/LCSD failure
S = MS/MSD failure

LOQ = Limit of Quantitation
B = Detected in the method blank
E = Quantitation of compound exceeded the calibration range
DL = Detection Limit
Q = Surrogate failure
U = Not detected at or above the LOQ
N = Recovery is out of criteria
P = The RPD between two GC columns exceeds 40%
J = Estimated result < LOQ and ≥ DL
L = LCS/LCSD failure
H = Out of holding time
W = Reported on wet weight basis
LOD = Limit of Detection
S = MS/MSD failure

LOQ = Limit of Quantitation
U = Not detected at or above the LOQ
H = Out of holding time
B = Detected in the method blank
N = Recovery is out of criteria
W = Reported on wet weight basis
E = Quantitation of compound exceeded the calibration range
P = The RPD between two GC columns exceeds 40%
LOD = Limit of Detection
DL = Detection Limit
J = Estimated result < LOQ and ≥ DL
Q = Surrogate failure
L = LCS/LCSD failure
S = MS/MSD failure

Samples Receipt Checklist (SRC) (ME0018C-15)
Issuing Authority: Pace ENV - WCOL

Revised:9/29/2020

Sample Receipt Checklist (SRC)

Client: TETRA TECH Cooler Inspected by/date: JSM / 07/10/2021 Lot #: WG10017

Means of receipt: ☐ Pace ☐ Client ☐ UPS ☑ FedEx ☐ Other:

☑ Yes	☐ No		1. Were custody seals present on the cooler?
☑ Yes	☐ No	☐ NA	2. If custody seals were present, were they intact and unbroken?

pH Strip ID: NA Chlorine Strip ID: NA Tested by: NA

Original temperature upon receipt / Derived (Corrected) temperature upon receipt %Solid Snap-Cup ID: NA

3.8 / 3.8 °C NA / NA °C NA / NA °C NA / NA °C

Method: ☑ Temperature Blank ☐ Against Bottles IR Gun ID: 5 IR Gun Correction Factor: 0 °C

Method of coolant: ☑ Wet Ice ☐ Ice Packs ☐ Dry Ice ☐ None

☐ Yes	☐ No	☑ NA	3. If temperature of any cooler exceeded 6.0°C, was Project Manager Notified? PM was Notified by: phone / email / face-to-face (circle one).
☑ Yes	☐ No	☐ NA	4. Is the commercial courier's packing slip attached to this form?
☑ Yes	☐ No		5. Were proper custody procedures (relinquished/received) followed?
☑ Yes	☐ No		6. Were sample IDs listed on the COC?
☑ Yes	☐ No		7. Were sample IDs listed on all sample containers?
☑ Yes	☐ No		8. Was collection date & time listed on the COC?
☑ Yes	☐ No		9. Was collection date & time listed on all sample containers?
☑ Yes	☐ No		10. Did all container label information (ID, date, time) agree with the COC?
☑ Yes	☐ No		11. Were tests to be performed listed on the COC?
☑ Yes	☐ No		12. Did all samples arrive in the proper containers for each test and/or in good condition (unbroken, lids on, etc.)?
☑ Yes	☐ No		13. Was adequate sample volume available?
☑ Yes	☐ No		14. Were all samples received within ½ the holding time or 48 hours, whichever comes first?
☐ Yes	☑ No		15. Were any samples containers missing/excess (circle one) samples Not listed on COC?
☐ Yes	☐ No	☑ NA	16. For VOA and RSK-175 samples, were bubbles present >"pea-size" (¼" or 6mm in diameter) in any of the VOA vials?
☐ Yes	☐ No	☑ NA	17. Were all DRO/metals/nutrient samples received at a pH of < 2?
☐ Yes	☐ No	☑ NA	18. Were all cyanide samples received at a pH > 12 and sulfide samples received at a pH > 9?
☐ Yes	☐ No	☑ NA	19. Were all applicable NH_3/TKN/cyanide/phenol/625.1/608.3 (< 0.5mg/L) samples free of residual chlorine?
☐ Yes	☐ No	☑ NA	20. Were client remarks/requests (i.e. requested dilutions, MS/MSD designations, etc...) correctly transcribed from the COC into the comment section in LIMS?
☐ Yes	☑ No		21. Was the quote number listed on the container label? If yes, Quote # NA

Sample Preservation (Must be completed for any sample(s) incorrectly preserved or with headspace.)

Sample(s) NA were received incorrectly preserved and were adjusted accordingly in sample receiving with NA mL of circle one: H2SO4, HNO3, HCl, NaOH using SR # NA.
Time of preservation NA. If more than one preservative is needed, please note in the comments below.

Sample(s) NA were received with bubbles >6 mm in diameter.

Samples(s) NA were received with TRC > 0.5 mg/L (If #19 is *no*) and were adjusted accordingly in sample receiving with sodium thiosulfate ($Na_2S_2O_3$) with Shealy ID: NA.

Report of Analysis

Tetra Tech
Foster Plaza 7
661 Anderson Drive
Pittsburgh, PA 15220
Attention: Mike Dahlquist

Project Name: NASA ARC PFAS

Project Number: 103IG667601

Lot Number:**WG20002**

Date Completed:07/30/2021

07/30/2021 2:25 PM
Approved and released by:
Project Manager II: **Kathy E. Smith**

The electronic signature above is the equivalent of a handwritten signature.
This report shall not be reproduced, except in its entirety, without the written approval of Pace Analytical Services, LLC.

Case Narrative
Tetra Tech
Lot Number: WG20002

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the Pace Quality Assurance Management Plan (QAMP), applicable Shealy standard operating procedures (SOPs), the 2003 NELAC standard, and Shealy policies. Additionally, the DoD QSM version 5.3 has been followed for these samples, and specifically Table B-15 was followed for all PFAS samples. Any exceptions to the QAMP, SOPs, NELAC standards, the DoD QSM, or policies are qualified on the results page or discussed below.

All QC associated with these samples was in compliance with DOD QSM 5.3 table B-15 and our PFAS SOP.

Correction factors (CF) are used to calculate the original sample concentration. The CF is the inverse of the concentration factor (sample volume / extract final volume) times the dilution factor (DF). For undiluted analysis. For undiluted analysis, the extract is prepared for injection by adding 182 uL of sample extract + 8 uL of reagent water + 10 uL of internal standard solution to a polypropylene autosampler vial. An extra correction factor of 0.91 (182 uL / 200 uL = 0.91) applies. The CF is calculated as follows:

CF = DF * FV / Vo

FV is volume of extract (mL)
Vo is initial sample volume (mL)
DF is dilution factor. For undiluted analysis, DF = 1/0.91.

Sample concentration for aqueous samples:
Concentration (ng/L) = Cs*CF,

$$C_s = \frac{\left(\frac{(A_s x C_{is})}{A_{is}}\right) - B}{M1}$$

Where

C_s is on column concentration of target analyte in the sample (ng/L)
C_{is} is concentration of internal standard in the sample (ng/L)
A_s is peak response of target analyte in the sample
A_{is} is peak response of internal standard in the sample
M1 is the average RF from ICAL or the slope from linear regression ICAL
B is the y-intercept from the ICAL

The continuing calibration verification (CCV) associated with sample WG20002-029 for analyte: 8:2 FTS recovered above the upper control limit. The sample(s) associated with this CCV were non-detect for the affected analytes; therefore, the data has been reported.

Surrogate recovery for the following sample(s) was outside the upper control limit: WG20002-007. This sample did not contain any target analytes; therefore, re-extraction and/or re-analysis was not performed.

The MS/MSD associated with samples WG20002-019, WG20002-020 had multiple analytes recovered outside of the acceptance limits. The LCS was recovered within the required acceptance limits; therefore, this demonstrates a matrix effect and data quality is not impacted.

LOQ = Limit of Quantitation
U = Not detected at or above the LOQ
H = Out of holding time
B = Detected in the method blank
N = Recovery is out of criteria
W = Reported on wet weight basis
E = Quantitation of compound exceeded the calibration range
P = The RPD between two GC columns exceeds 40%
LOD = Limit of Detection
DL = Detection Limit
J = Estimated result < LOQ and ≥ DL
Q = Surrogate failure
L = LCS/LCSD failure
S = MS/MSD failure

LOQ = Limit of Quantitation
U = Not detected at or above the LOQ
H = Out of holding time
B = Detected in the method blank
N = Recovery is out of criteria
W = Reported on wet weight basis
E = Quantitation of compound exceeded the calibration range
P = The RPD between two GC columns exceeds 40%
LOD = Limit of Detection
DL = Detection Limit
J = Estimated result < LOQ and ≥ DL
Q = Surrogate failure
L = LCS/LCSD failure
S = MS/MSD failure

Sample Receipt Checklist (SRC)

Client: Tetra Tech Cooler Inspected by/date: JRG2 / 07/20/2021 Lot #: WO20002

Means of receipt: ☐ Pace ☐ Client ☐ UPS ☑ FedEx ☐ Other:

☐ Yes	☑ No		1. Were custody seals present on the cooler?
☐ Yes	☐ No	☑ NA	2. If custody seals were present, were they intact and unbroken?

pH Strip ID: NA Chlorine Strip ID: NA Tested by: NA

Original temperature upon receipt / Derived (Corrected) temperature upon receipt %Solid Snap-Cup ID: 21-1425

4.7 / 4.7 °C NA / NA °C NA / NA °C NA / NA °C

Method: ☑ Temperature Blank ☐ Against Bottles IR Gun ID: 5 IR Gun Correction Factor: 0 °C

Method of coolant: ☑ Wet Ice ☐ Ice Packs ☐ Dry Ice ☐ None

☐ Yes	☐ No	☑ NA	3. If temperature of any cooler exceeded 6.0°C, was Project Manager Notified? PM was Notified by: phone / email / face-to-face (circle one).
☑ Yes	☐ No	☐ NA	4. Is the commercial courier's packing slip attached to this form?
☑ Yes	☐ No		5. Were proper custody procedures (relinquished/received) followed?
☑ Yes	☐ No		6. Were sample IDs listed on the COC?
☑ Yes	☐ No		7. Were sample IDs listed on all sample containers?
☑ Yes	☐ No		8. Was collection date & time listed on the COC?
☑ Yes	☐ No		9. Was collection date & time listed on all sample containers?
☑ Yes	☐ No		10. Did all container label information (ID, date, time) agree with the COC?
☑ Yes	☐ No		11. Were tests to be performed listed on the COC?
☑ Yes	☐ No		12. Did all samples arrive in the proper containers for each test and/or in good condition (unbroken, lids on, etc.)?
☑ Yes	☐ No		13. Was adequate sample volume available?
☐ Yes	☑ No		14. Were all samples received within ½ the holding time or 48 hours, whichever comes first?
☐ Yes	☑ No		15. Were any samples containers missing/excess (circle one) samples Not listed on COC?
☐ Yes	☐ No	☑ NA	16. For VOA and RSK-175 samples, were bubbles present >"pea-size" (¼"or 6mm in diameter) in any of the VOA vials?
☐ Yes	☐ No	☑ NA	17. Were all DRO/metals/nutrient samples received at a pH of < 2?
☐ Yes	☐ No	☑ NA	18. Were all cyanide samples received at a pH > 12 and sulfide samples received at a pH > 9?
☐ Yes	☐ No	☑ NA	19. Were all applicable NH_3/TKN/cyanide/phenol/625.1/608.3 (< 0.5mg/L) samples free of residual chlorine?
☐ Yes	☐ No	☑ NA	20. Were client remarks/requests (i.e. requested dilutions, MS/MSD designations, etc...) correctly transcribed from the COC into the comment section in LIMS?
☐ Yes	☑ No		21. Was the quote number listed on the container label? If yes, Quote #

Sample Preservation (Must be completed for any sample(s) incorrectly preserved or with headspace.)

Sample(s) NA were received incorrectly preserved and were adjusted accordingly in sample receiving with NA mL of circle one: H2SO4, HNO3, HCl, NaOH using SR # NA.
Time of preservation NA. If more than one preservative is needed, please note in the comments below.

Sample(s) NA were received with bubbles >6 mm in diameter.

Samples(s) NA were received with TRC > 0.5 mg/L (If #19 is ***no***) and were adjusted accordingly in sample receiving with sodium thiosulfate ($Na_2S_2O_3$) with Shealy ID: NA.

Case Narrative
Tetra Tech
Lot Number: WG20004

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the Pace Quality Assurance Management Plan (QAMP), applicable Shealy standard operating procedures (SOPs), the 2003 NELAC standard, and Shealy policies. Additionally, the DoD QSM version 5.3 has been followed for these samples, and specifically Table B-15 was followed for all PFAS samples. Any exceptions to the QAMP, SOPs, NELAC standards, the DoD QSM, or policies are qualified on the results page or discussed below.

All QC associated with these samples was in compliance with DOD QSM 5.3 table B-15 and our PFAS SOP.

Correction factors (CF) are used to calculate the original sample concentration. The CF is the inverse of the concentration factor (sample volume / extract final volume) times the dilution factor (DF). For undiluted analysis. For undiluted analysis, the extract is prepared for injection by adding 182 uL of sample extract + 8 uL of reagent water + 10 uL of internal standard solution to a polypropylene autosampler vial. An extra correction factor of 0.91 (182 uL / 200 uL = 0.91) applies. The CF is calculated as follows:

CF = DF * FV / Vo

FV is volume of extract (mL)
Vo is initial sample volume (mL)
DF is dilution factor. For undiluted analysis, DF = 1/0.91.

Sample concentration for aqueous samples:
Concentration (ng/L) = Cs*CF,

$$C_s = \frac{\left(\frac{(A_s x C_{is})}{A_{is}}\right) - B}{M1}$$

Where

C_s is on column concentration of target analyte in the sample (ng/L)
C_{is} is concentration of internal standard in the sample (ng/L)
A_s is peak response of target analyte in the sample
A_{is} is peak response of internal standard in the sample
M1 is the average RF from ICAL or the slope from linear regression ICAL
B is the y-intercept from the ICAL

Samples WG20004-004 required centrifugation prior to extraction, due to excessive solids present in the samples. Centrifugation was performed following the PFAS Aqueous Centrifuge Protocol; samples were spiked with Surrogate (SUR; Extracted Internal Standard/EIS) and shaken vigorously before being poured into a conical bottle and centrifuged. The centrifuged aqueous sample was decanted back into the original sample bottle, off of the condensed solids remaining in the centrifuge bottle. Original sample bottle was rinsed as normal and centrifuge bottle was rinsed with 4mL of MeOH. Centrifuge bottle rinsate was added to the elution. Samples concentrated to <10mL and reconstituted to 10mL using MeOH by transfer pipet.

The laboratory control sample (LCS) for analytical batch 10188 recovered outside acceptance criteria for PFPeS. For the following samples there was an insufficient amount to perform a re-extraction or re-analysis: WG20004-019, WG20004-022, WG20004-023, WG20004-024, WG20004-025. The data has been reported.

The continuing calibration verification (CCV) associated with sample WG20004-013 for analyte(s): GenX recovered above the upper control limit. The sample(s) associated with this CCV were non-detect for the affected analytes; therefore, the data has been reported.

The continuing calibration verification (CCV) associated with samples WG20004-001, WG20004-002, WG20004-006, WG20004-007, WG20004-008, WG20004-009, WG20004-010, WG20004-011, WG20004-012 for analyte: 8:2 FTS recovered above the upper control limit. The samples associated with this CCV were non-detect for the affected analytes; therefore, the data has been reported.

Surrogate recovery for the following sample(s) was outside control limits: WG20004-014. Re-extraction and/or re-analysis was performed with concurring results. Both sets of data have been reported.

Surrogate recovery for the following samplewas outside of acceptance limits: WG20004-026. There was insufficient sample to perform a re-extraction; therefore, the data have been reported.

Surrogate recovery for the following samples was outside control limits: WG20004-004, WG20004-013. Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Surrogate recovery for the following sample was outside the upper control limit: WG20004-011. This sample did not contain any target analytes; therefore, re-extraction and/or re-analysis was not performed.

The MS/MSD associated with samples WG20004-001, WG20004-018, WG20004-024 had multiple analytes recovered outside of the acceptance limits. The LCS was recovered within the required acceptance limits; therefore, this demonstrates a matrix effect and data quality is not impacted.

The method blank associated with batches 10113, 10799 had PFOS detected at a concentration that was above the MDL but below ½ the PQL. All samples associated with this method blank that have detections for PFOS have been flagged with a "B".

PFAS by LC/MS/MS

Client: Tetra Tech
Laboratory ID: WG20004-001
Description: AOPC18-11E02A-071221
Matrix: Aqueous
Date Sampled: 07/12/2021 1315
Project Name: NASA ARC PFAS
Date Received: 07/20/2021
Project Number: 103IG667601

Run	Prep Method	Analytical Method	Dilution	Analysis Date	Analyst	Prep Date	Batch

LOQ = Limit of Quantitation
U = Not detected at or above the LOQ
H = Out of holding time
B = Detected in the method blank
N = Recovery is out of criteria
W = Reported on wet weight basis
E = Quantitation of compound exceeded the calibration range
P = The RPD between two GC columns exceeds 40%
LOD = Limit of Detection
DL = Detection Limit
J = Estimated result < LOQ and ≥ DL
Q = Surrogate failure
L = LCS/LCSD failure
S = MS/MSD failure

H = Out of holding time
B = Detected in the method blank
N = Recovery is out of criteria
W = Reported on wet weight basis
E = Quantitation of compound exceeded the calibration range
P = The RPD between two GC columns exceeds 40%
LOD = Limit of Detection
DL = Detection Limit
J = Estimated result < LOQ and ≥ DL
Q = Surrogate failure
L = LCS/LCSD failure
S = MS/MSD failure

Sample Receipt Checklist (SRC)

Client: Tetra Tech Cooler Inspected by/date: JRG2 / 07/20/2021 Lot #: WG200004

Means of receipt: ☐ Pace ☐ Client ☐ UPS ☑ FedEx ☐ Other:			
☐ Yes	☑ No		1. Were custody seals present on the cooler?
☐ Yes	☐ No	☑ NA	2. If custody seals were present, were they intact and unbroken?

pH Strip ID: NA Chlorine Strip ID: NA Tested by: NA

Original temperature upon receipt / Derived (Corrected) temperature upon receipt %Solid Snap-Cup ID: NA

1.3 / 1.3 °C NA / NA °C NA / NA °C NA / NA °C

Method: ☑ Temperature Blank ☐ Against Bottles IR Gun ID: 5 IR Gun Correction Factor: 0 °C

Method of coolant: ☑ Wet Ice ☐ Ice Packs ☐ Dry Ice ☐ None

☐ Yes	☐ No	☑ NA	3. If temperature of any cooler exceeded 6.0°C, was Project Manager Notified? PM was Notified by: phone / email / face-to-face (circle one).
☑ Yes	☐ No	☐ NA	4. Is the commercial courier's packing slip attached to this form?
☑ Yes	☐ No		5. Were proper custody procedures (relinquished/received) followed?
☑ Yes	☐ No		6. Were sample IDs listed on the COC?
☑ Yes	☐ No		7. Were sample IDs listed on all sample containers?
☑ Yes	☐ No		8. Was collection date & time listed on the COC?
☑ Yes	☐ No		9. Was collection date & time listed on all sample containers?
☑ Yes	☐ No		10. Did all container label information (ID, date, time) agree with the COC?
☑ Yes	☐ No		11. Were tests to be performed listed on the COC?
☑ Yes	☐ No		12. Did all samples arrive in the proper containers for each test and/or in good condition (unbroken, lids on, etc.)?
☑ Yes	☐ No		13. Was adequate sample volume available?
☐ Yes	☑ No		14. Were all samples received within ½ the holding time or 48 hours, whichever comes first?
☑ Yes	☐ No		15. Were any samples containers missing/excess (circle one) samples Not listed on COC?
☐ Yes	☐ No	☑ NA	16. For VOA and RSK-175 samples, were bubbles present >"pea-size" (¼" or 6mm in diameter) in any of the VOA vials?
☐ Yes	☐ No	☑ NA	17. Were all DRO/metals/nutrient samples received at a pH of < 2?
☐ Yes	☐ No	☑ NA	18. Were all cyanide samples received at a pH > 12 and sulfide samples received at a pH > 9?
☐ Yes	☐ No	☑ NA	19. Were all applicable NH_3/TKN/cyanide/phenol/625.1/608.3 (< 0.5mg/L) samples free of residual chlorine?
☐ Yes	☐ No	☑ NA	20. Were client remarks/requests (i.e. requested dilutions, MS/MSD designations, etc…) correctly transcribed from the COC into the comment section in LIMS?
☐ Yes	☑ No		21. Was the quote number listed on the container label? If yes, Quote #

Sample Preservation (Must be completed for any sample(s) incorrectly preserved or with headspace.)

Sample(s) NA were received incorrectly preserved and were adjusted accordingly in sample receiving with NA mL of circle one: H2SO4, HNO3, HCl, NaOH using SR # NA.
Time of preservation NA. If more than one preservative is needed, please note in the comments below.

Sample(s) NA were received with bubbles >6 mm in diameter.

Samples(s) NA were received with TRC > 0.5 mg/L (If #19 is ***no***) and were adjusted accordingly in sample receiving with sodium thiosulfate ($Na_2S_2O_3$) with Shealy ID: NA.

SR barcode labels applied by: JRG2 Date: 07/20/2021

Comments: Excess: 1-250ml FB-07-071621 7/16 @ 1600

Report of Analysis

Tetra Tech

Case Narrative
Tetra Tech
Lot Number: WG22011

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the Pace Quality Assurance Management Plan (QAMP), applicable Shealy standard operating procedures (SOPs), the 2003 NELAC standard, and Shealy policies. Additionally, the DoD QSM version 5.3 has been followed for these samples, and specifically Table B-15 was followed for all PFAS samples. Any exceptions to the QAMP, SOPs, NELAC standards, the DoD QSM, or policies are qualified on the results page or discussed below.

All QC associated with these samples was in compliance with DOD QSM 5.3 table B-15 and our PFAS SOP.

Correction factors (CF) are used to calculate the original sample concentration. The CF is the inverse of the concentration factor (sample volume / extract final volume) times the dilution factor (DF). For undiluted analysis. For undiluted analysis, the extract is prepared for injection by adding 182 uL of sample extract + 8 uL of reagent water + 10 uL of internal standard solution to a polypropylene autosampler vial. An extra correction factor of 0.91 (182 uL / 200 uL = 0.91) applies. The CF is calculated as follows:

CF = DF * FV / Vo

FV is volume of extract (mL)
Vo is initial sample volume (mL)
DF is dilution factor. For undiluted analysis, DF = 1/0.91.

Sample concentration for aqueous samples:
Concentration (ng/L) = Cs*CF,

$$C_s = \frac{\left(\frac{(A_s x C_{is})}{A_{is}}\right) - B}{M1}$$

Where

C_s is on column concentration of target analyte in the sample (ng/L)
C_{is} is concentration of internal standard in the sample (ng/L)
A_s is peak response of target analyte in the sample
A_{is} is peak response of internal standard in the sample
M1 is the average RF from ICAL or the slope from linear regression ICAL
B is the y-intercept from the ICAL

Samples WG22011-004, WG22011-019, WG22011-020 required centrifugation prior to extraction, due to excessive solids present in the samples. Centrifugation was performed following the PFAS Aqueous Centrifuge Protocol; samples were spiked with Surrogate (SUR; Extracted Internal Standard/EIS) and shaken vigorously before being poured into a conical bottle and centrifuged. The centrifuged aqueous sample was decanted back into the original sample bottle, off of the condensed solids remaining in the centrifuge bottle. Original sample bottle was rinsed as normal and centrifuge bottle was rinsed with 4mL of MeOH. Centrifuge bottle rinsate was added to the elution. Samples concentrated to <10mL and reconstituted to 10mL using MeOH by transfer pipet.

For samples WG22011-015, WG22011-019 sample matrix prevented full volume from being extracted, precluding method mandated bottle rinse. Elution solvent was aliquoted directly into the reservoir, rinsing the inside. Surrogate recovery may be adversely affected

The laboratory control sample (LCS) for analytical batch 10421 recovered outside acceptance criteria for PFPeS. For the following sample there was an insufficient amount to perform a re-extraction or re-analysis: WG22011-007, WG22011-009. The data has been reported.

The laboratory control sample (LCS) for analytical batch 10188 recovered outside acceptance criteria for PFPeS. Affected samples were re-extracted and both sets of data have been reported.

The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for prep batch 10452 exceeded acceptance criteria for the following analytes: GenX. These analytes were biased high and were not detected in the samples affected: WG22011-014, WG22011-015, WG22011-016, WG22011-017, WG22011-018, WG22011-019, WG22011-020, WG22011-021.

The laboratory control sample (LCS) for prep batch 10675 recovered outside acceptance criteria for PFPeS and 6:2 FTS. For the following samples there was an insufficient amount to perform a re-extraction or re-analysis: WG22011-003, WG22011-004, WG22011-005, WG22011-006, WG22011-008. The data has been reported.

The continuing calibration verification (CCV) associated with samples WG22011-003, WG22011-004, WG22011-005, WG22011-006, WG22011-008, WG22011-014, WG22011-015, WG22011-016, WG22011-017, WG22011-018, WG22011-019, WG22011-020, WG22011-021 for analyte: GenX recovered above the upper control limit. The samples associated with this CCV were non-detect for the affected analytes; therefore, the data has been reported.

Surrogate recovery for the following samples was outside the upper control limit: WG22011-005, WG22011-006, WG22011-012. This sample did not contain any target analytes; therefore, re-extraction and/or re-analysis was not performed.

Surrogate recovery for the following sample was outside control limits: WG22011-007. The sample was also the batch duplicate and had concurring surrogate recoveries. Both sets of data have been reported.

Surrogate recovery for the following sample was outside control limits: WG22011-019. Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Surrogate recovery for the following sample was outside control limits: WG22011-004. This sample was also the batch duplicate with acceptable results. Both sets of data have been reported.

The MS/MSD associated with sample WG22011-012 had 6:2 FTS recovered outside of the acceptance limits. The LCS was recovered within the required acceptance limits; therefore, this demonstrates a matrix effect and data quality is not impacted.

Samples Receipt Checklist (SRC) (ME0018C-15)
Issuing Authority: Pace ENV - WCOL

Revised:9/29/2020
Page 1 of 1

Sample Receipt Checklist (SRC)

Client: Tetra Tech Cooler Inspected by/date: JSM / 07/22/2021 Lot #: WG22011

Means of receipt: ☐ Pace ☐ Client ☐ UPS ☑ FedEx ☐ Other:

☑ Yes	☐ No		1. Were custody seals present on the cooler?
☑ Yes	☐ No	☐ NA	2. If custody seals were present, were they intact and unbroken?

pH Strip ID: NA Chlorine Strip ID: NA Tested by: NA

Original temperature upon receipt / Derived (Corrected) temperature upon receipt %Solid Snap-Cup ID: NA

2.1 / 2.1 °C NA / NA °C NA / NA °C NA / NA °C

Method: ☑ Temperature Blank ☐ Against Bottles IR Gun ID: 5 IR Gun Correction Factor: 0 °C

Method of coolant: ☑ Wet Ice ☐ Ice Packs ☐ Dry Ice ☐ None

☐ Yes	☐ No	☑ NA	3. If temperature of any cooler exceeded 6.0°C, was Project Manager Notified? PM was Notified by: phone / email / face-to-face (circle one).
☑ Yes	☐ No	☐ NA	4. Is the commercial courier's packing slip attached to this form?
☑ Yes	☐ No		5. Were proper custody procedures (relinquished/received) followed?
☑ Yes	☐ No		6. Were sample IDs listed on the COC?
☑ Yes	☐ No		7. Were sample IDs listed on all sample containers?
☑ Yes	☐ No		8. Was collection date & time listed on the COC?
☑ Yes	☐ No		9. Was collection date & time listed on all sample containers?
☑ Yes	☐ No		10. Did all container label information (ID, date, time) agree with the COC?
☑ Yes	☐ No		11. Were tests to be performed listed on the COC?
☑ Yes	☐ No		12. Did all samples arrive in the proper containers for each test and/or in good condition (unbroken, lids on, etc.)?
☑ Yes	☐ No		13. Was adequate sample volume available?
☐ Yes	☑ No		14. Were all samples received within ½ the holding time or 48 hours, whichever comes first?
☐ Yes	☑ No		15. Were any samples containers missing/excess (circle one) samples Not listed on COC?
☐ Yes	☐ No	☑ NA	16. For VOA and RSK-175 samples, were bubbles present >"pea-size" (¼"or 6mm in diameter) in any of the VOA vials?
☐ Yes	☐ No	☑ NA	17. Were all DRO/metals/nutrient samples received at a pH of < 2?
☐ Yes	☐ No	☑ NA	18. Were all cyanide samples received at a pH > 12 and sulfide samples received at a pH > 9?
☐ Yes	☐ No	☑ NA	19. Were all applicable NH_3/TKN/cyanide/phenol/625.1/608.3 (< 0.5mg/L) samples free of residual chlorine?
☐ Yes	☐ No	☑ NA	20. Were client remarks/requests (i.e. requested dilutions, MS/MSD designations, etc…) correctly transcribed from the COC into the comment section in LIMS?
☐ Yes	☑ No		21. Was the quote number listed on the container label? If yes, Quote #

Sample Preservation (Must be completed for any sample(s) incorrectly preserved or with headspace.)

Sample(s) NA were received incorrectly preserved and were adjusted accordingly in sample receiving with NA mL of circle one: H2SO4, HNO3, HCl, NaOH using SR # NA.
Time of preservation NA. If more than one preservative is needed, please note in the comments below.

Sample(s) NA were received with bubbles >6 mm in diameter.

Samples(s) NA were received with TRC > 0.5 mg/L (If #19 is ***no***) and were adjusted accordingly in sample receiving with sodium thiosulfate ($Na_2S_2O_3$) with Shealy ID: NA.

This report shall not be reproduced, except in its entirety, without the written approval of Pace Analytical Services, LLC.

Case Narrative
Tetra Tech
Lot Number: WG24008

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the Pace Quality Assurance Management Plan (QAMP), applicable Shealy standard operating procedures (SOPs), the 2003 NELAC standard, and Shealy policies. Additionally, the DoD QSM version 5.3 has been followed for these samples, and specifically Table B-15 was followed for all PFAS samples. Any exceptions to the QAMP, SOPs, NELAC standards, the DoD QSM, or policies are qualified on the results page or discussed below.

All QC associated with these samples was in compliance with DOD QSM 5.3 table B-15 and our PFAS SOP.

Correction factors (CF) are used to calculate the original sample concentration. The CF is the inverse of the concentration factor (sample volume / extract final volume) times the dilution factor (DF). For undiluted analysis. For undiluted analysis, the extract is prepared for injection by adding 182 uL of sample extract + 8 uL of reagent water + 10 uL of internal standard solution to a polypropylene autosampler vial. An extra correction factor of 0.91 (182 uL / 200 uL = 0.91) applies. The CF is calculated as follows:

CF = DF * FV / Vo

FV is volume of extract (mL)
Vo is initial sample volume (mL)
DF is dilution factor. For undiluted analysis, DF = 1/0.91.

Sample concentration for aqueous samples:
Concentration (ng/L) = Cs*CF,

$$C_s = \frac{\left(\frac{(A_s x C_{is})}{A_{is}}\right) - B}{M1}$$

Where

C_s is on column concentration of target analyte in the sample (ng/L)
C_{is} is concentration of internal standard in the sample (ng/L)
A_s is peak response of target analyte in the sample
A_{is} is peak response of internal standard in the sample
M1 is the average RF from ICAL or the slope from linear regression ICAL
B is the y-intercept from the ICAL

The continuing calibration verification (CCV) associated with samples WG24008-003, WG24008-004, WG24008-005 for analytes: 6:2-FTS recovered above the upper control limit. The samples associated with this CCV were non-detect for the affected analytes; therefore, the data has been reported.

The MS/MSD associated with sample WG24008-005 had multiple analytes recovered outside of the acceptance limits. The LCS was recovered within the required acceptance limits; therefore, this demonstrates a matrix effect and data quality is not impacted.

Sample Receipt Checklist (SRC)

Client: TETRA TECH | Cooler Inspected by/date: JSM / 07/24/2021 | Lot #: WG24008

Means of receipt: ☐ Pace ☐ Client ☐ UPS ☑ FedEx ☐ Other: ____

☐ Yes	☑ No		1. Were custody seals present on the cooler?
☐ Yes	☐ No	☑ NA	2. If custody seals were present, were they intact and unbroken?

pH Strip ID: NA | Chlorine Strip ID: NA | Tested by: NA

Original temperature upon receipt / Derived (Corrected) temperature upon receipt: | %Solid Snap-Cup ID: NA

4.8 / 4.8 °C NA / NA °C NA / NA °C NA / NA °C

Method: ☐ Temperature Blank ☑ Against Bottles IR Gun ID: 5 IR Gun Correction Factor: 0 °C

Method of coolant: ☑ Wet Ice ☐ Ice Packs ☐ Dry Ice ☐ None

☐ Yes	☐ No	☑ NA	3. If temperature of any cooler exceeded 6.0°C, was Project Manager Notified? PM was Notified by: phone / email / face-to-face (circle one).
☑ Yes	☐ No	☐ NA	4. Is the commercial courier's packing slip attached to this form?
☑ Yes	☐ No		5. Were proper custody procedures (relinquished/received) followed?
☑ Yes	☐ No		6. Were sample IDs listed on the COC?
☑ Yes	☐ No		7. Were sample IDs listed on all sample containers?
☑ Yes	☐ No		8. Was collection date & time listed on the COC?
☑ Yes	☐ No		9. Was collection date & time listed on all sample containers?
☑ Yes	☐ No		10. Did all container label information (ID, date, time) agree with the COC?
☑ Yes	☐ No		11. Were tests to be performed listed on the COC?
☑ Yes	☐ No		12. Did all samples arrive in the proper containers for each test and/or in good condition (unbroken, lids on, etc.)? ____
☑ Yes	☐ No		13. Was adequate sample volume available?
☑ Yes	☐ No		14. Were all samples received within ½ the holding time or 48 hours, whichever comes first?
☐ Yes	☑ No		15. Were any samples containers missing/excess (circle one) samples Not listed on COC?
☐ Yes	☐ No	☑ NA	16. For VOA and RSK-175 samples, were bubbles present >"pea-size" (¼"or 6mm in diameter) in any of the VOA vials?
☐ Yes	☐ No	☑ NA	17. Were all DRO/metals/nutrient samples received at a pH of < 2?
☐ Yes	☐ No	☑ NA	18. Were all cyanide samples received at a pH > 12 and sulfide samples received at a pH > 9?
☐ Yes	☐ No	☑ NA	19. Were all applicable NH_3/TKN/cyanide/phenol/625.1/608.3 (< 0.5mg/L) samples free of residual chlorine?
☐ Yes	☐ No	☑ NA	20. Were client remarks/requests (i.e. requested dilutions, MS/MSD designations, etc…) correctly transcribed from the COC into the comment section in LIMS?
☐ Yes	☑ No		21. Was the quote number listed on the container label? If yes, Quote # NA

Sample Preservation (Must be completed for any sample(s) incorrectly preserved or with headspace.)

Sample(s) NA ____ were received incorrectly preserved and were adjusted accordingly in sample receiving with NA mL of circle one: H2SO4, HNO3, HCl, NaOH using SR # NA. Time of preservation NA. If more than one preservative is needed, please note in the comments below.

Sample(s) NA ____ were received with bubbles >6 mm in diameter.

Samples(s) NA ____ were received with TRC > 0.5 mg/L (If #19 is *no*) and were adjusted accordingly in sample receiving with sodium thiosulfate ($Na_2S_2O_3$) with Shealy ID: NA.

Case Narrative
Tetra Tech
Lot Number: WG24009

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the Pace Quality Assurance Management Plan (QAMP), applicable Shealy standard operating procedures (SOPs), the 2003 NELAC standard, and Shealy policies. Additionally, the DoD QSM version 5.3 has been followed for these samples, and specifically Table B-15 was followed for all PFAS samples. Any exceptions to the QAMP, SOPs, NELAC standards, the DoD QSM, or policies are qualified on the results page or discussed below.

All QC associated with these samples was in compliance with DOD QSM 5.3 table B-15 and our PFAS SOP.

Correction factors (CF) are used to calculate the original sample concentration. The CF is the inverse of the concentration factor (sample volume / extract final volume) times the dilution factor (DF). For undiluted analysis. For undiluted analysis, the extract is prepared for injection by adding 182 uL of sample extract + 8 uL of reagent water + 10 uL of internal standard solution to a polypropylene autosampler vial. An extra correction factor of 0.91 (182 uL / 200 uL = 0.91) applies. The CF is calculated as follows:

CF = DF * FV / Vo

FV is volume of extract (mL)
Vo is initial sample volume (mL)
DF is dilution factor. For undiluted analysis, DF = 1/0.91.

Sample concentration for aqueous samples:
Concentration (ng/L) = Cs*CF,

$$C_s = \frac{\left(\frac{(A_s x C_{is})}{A_{is}}\right) - B}{M1}$$

Where

C_s is on column concentration of target analyte in the sample (ng/L)
C_{is} is concentration of internal standard in the sample (ng/L)
A_s is peak response of target analyte in the sample
A_{is} is peak response of internal standard in the sample
M1 is the average RF from ICAL or the slope from linear regression ICAL
B is the y-intercept from the ICAL

The continuing calibration verification (CCV) associated with samples WG24009-008, WG24009-011 for analytes: 6:2-FTS recovered above the upper control limit. The samples associated with this CCV were non-detect for the affected analytes; therefore, the data has been reported.

Sample WG24009-004 had multiple surrogates recovered outside of the acceptance limits due to matrix interference. The sample was reanalyzed at a dilution, all runs have been reported.

LOQ = Limit of Quantitation
B = Detected in the method blank
E = Quantitation of compound exceeded the calibration range
DL = Detection Limit
Q = Surrogate failure
U = Not detected at or above the LOQ
N = Recovery is out of criteria
P = The RPD between two GC columns exceeds 40%
J = Estimated result < LOQ and ≥ DL
L = LCS/LCSD failure
H = Out of holding time
W = Reported on wet weight basis
LOD = Limit of Detection
S = MS/MSD failure

LOQ = Limit of Quantitation
B = Detected in the method blank
E = Quantitation of compound exceeded the calibration range
DL = Detection Limit
Q = Surrogate failure
U = Not detected at or above the LOQ
N = Recovery is out of criteria
P = The RPD between two GC columns exceeds 40%
J = Estimated result < LOQ and ≥ DL
L = LCS/LCSD failure
H = Out of holding time
W = Reported on wet weight basis
LOD = Limit of Detection
S = MS/MSD failure

Samples Receipt Checklist (SRC) (ME0018C-15)
Issuing Authority: Pace ENV - WCOL

Revised:9/29/2020
Page 1 of 1

Sample Receipt Checklist (SRC)

Client: TETRA TECH | Cooler Inspected by/date: JSM / 07/24/2021 | Lot #: WG24069

Means of receipt: ☐ Pace ☐ Client ☐ UPS ☑ FedEx ☐ Other: ____

☐ Yes	☑ No		1. Were custody seals present on the cooler?
☐ Yes	☐ No	☑ NA	2. If custody seals were present, were they intact and unbroken?

pH Strip ID: NA | Chlorine Strip ID: NA | Tested by: NA

Original temperature upon receipt / Derived (Corrected) temperature upon receipt | %Solid Snap-Cup ID: NA

5.8 / 5.8 °C | NA / NA °C | NA / NA °C | NA / NA °C

Method: ☐ Temperature Blank ☑ Against Bottles IR Gun ID: 5 IR Gun Correction Factor: 0 °C

Method of coolant: ☑ Wet Ice ☐ Ice Packs ☐ Dry Ice ☐ None

☐ Yes	☐ No	☑ NA	3. If temperature of any cooler exceeded 6.0°C, was Project Manager Notified? PM was Notified by: phone / email / face-to-face (circle one).
☑ Yes	☐ No	☐ NA	4. Is the commercial courier's packing slip attached to this form?
☑ Yes	☐ No		5. Were proper custody procedures (relinquished/received) followed?
☑ Yes	☐ No		6. Were sample IDs listed on the COC?
☑ Yes	☐ No		7. Were sample IDs listed on all sample containers?
☑ Yes	☐ No		8. Was collection date & time listed on the COC?
☑ Yes	☐ No		9. Was collection date & time listed on all sample containers?
☑ Yes	☐ No		10. Did all container label information (ID, date, time) agree with the COC?
☑ Yes	☐ No		11. Were tests to be performed listed on the COC?
☑ Yes	☐ No		12. Did all samples arrive in the proper containers for each test and/or in good condition (unbroken, lids on, etc.)?
☑ Yes	☐ No		13. Was adequate sample volume available?
☑ Yes	☐ No		14. Were all samples received within ½ the holding time or 48 hours, whichever comes first?
☐ Yes	☑ No		15. Were any samples containers missing/excess (circle one) samples Not listed on COC?
☐ Yes	☐ No	☑ NA	16. For VOA and RSK-175 samples, were bubbles present >"pea-size" (¼"or 6mm in diameter) in any of the VOA vials?
☐ Yes	☐ No	☑ NA	17. Were all DRO/metals/nutrient samples received at a pH of < 2?
☐ Yes	☐ No	☑ NA	18. Were all cyanide samples received at a pH > 12 and sulfide samples received at a pH > 9?
☐ Yes	☐ No	☑ NA	19. Were all applicable NH_3/TKN/cyanide/phenol/625.1/608.3 (< 0.5mg/L) samples free of residual chlorine?
☐ Yes	☐ No	☑ NA	20. Were client remarks/requests (i.e. requested dilutions, MS/MSD designations, etc…) correctly transcribed from the COC into the comment section in LIMS?
☐ Yes	☑ No		21. Was the quote number listed on the container label? If yes, Quote # NA

Sample Preservation (Must be completed for any sample(s) incorrectly preserved or with headspace.)

Sample(s) NA were received incorrectly preserved and were adjusted accordingly in sample receiving with NA mL of circle one: H_2SO_4, HNO_3, HCl, NaOH using SR # NA.
Time of preservation NA. If more than one preservative is needed, please note in the comments below.

Sample(s) NA were received with bubbles >6 mm in diameter.

Samples(s) NA were received with TRC > 0.5 mg/L (If #19 is *no*) and were adjusted accordingly in sample receiving with sodium thiosulfate ($Na_2S_2O_3$) with Shealy ID: NA.

Case Narrative
Tetra Tech
Lot Number: WG31010

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the Pace Quality Assurance Management Plan (QAMP), applicable Shealy standard operating procedures (SOPs), the 2003 NELAC standard, and Shealy policies. Additionally, the DoD QSM version 5.3 has been followed for these samples, and specifically Table B-15 was followed for all PFAS samples. Any exceptions to the QAMP, SOPs, NELAC standards, the DoD QSM, or policies are qualified on the results page or discussed below.

All QC associated with these samples was in compliance with DOD QSM 5.3 table B-15 and our PFAS SOP.

Correction factors (CF) are used to calculate the original sample concentration. The CF is the inverse of the concentration factor (sample volume / extract final volume) times the dilution factor (DF). For undiluted analysis. For undiluted analysis, the extract is prepared for injection by adding 182 uL of sample extract + 8 uL of reagent water + 10 uL of internal standard solution to a polypropylene autosampler vial. An extra correction factor of 0.91 (182 uL / 200 uL = 0.91) applies. The CF is calculated as follows:

CF = DF * FV / Vo

FV is volume of extract (mL)
Vo is initial sample volume (mL)
DF is dilution factor. For undiluted analysis, DF = 1/0.91.

Sample concentration for aqueous samples:
Concentration (ng/L) = Cs*CF,

$$C_s = \frac{\left(\frac{(A_s x C_{is})}{A_{is}}\right) - B}{M1}$$

Where

C_s is on column concentration of target analyte in the sample (ng/L)
C_{is} is concentration of internal standard in the sample (ng/L)
A_s is peak response of target analyte in the sample
A_{is} is peak response of internal standard in the sample
M1 is the average RF from ICAL or the slope from linear regression ICAL
B is the y-intercept from the ICAL

Samples WG31010-005 (parent, MS, and MSD) required centrifugation prior to extraction, due to excessive solids present in the samples. Centrifugation was performed following the PFAS Aqueous Centrifuge Protocol; samples were spiked with Surrogate (SUR; Extracted Internal Standard/EIS) and shaken vigorously before being poured into a conical bottle and centrifuged. The centrifuged aqueous sample was decanted back into the original sample bottle, off of the condensed solids remaining in the centrifuge bottle. Original sample bottle was rinsed as normal and centrifuge bottle was rinsed with 4mL of MeOH. Centrifuge bottle rinsate was added to the elution. Samples concentrated to <10mL and reconstituted to 10mL using MeOH by transfer pipet.

The method blank associated with batch 11942 had 6:2 FTS detected at a concentration that was above the MDL but below ½ the PQL. All samples associated with this method blank that have detections for 6:2 FTS have been flagged with a "B".

Sample WG31010-002 had the surrogate 4:2FTS recovered above the acceptance limits. This reflects a high bias for compounds associated with this surrogate. There were no detections for these compounds in the sample; therefore, there is no impact on data quality and no corrective action is required.

LOQ = Limit of Quantitation
U = Not detected at or above the LOQ
H = Out of holding time
B = Detected in the method blank
N = Recovery is out of criteria
W = Reported on wet weight basis
E = Quantitation of compound exceeded the calibration range
P = The RPD between two GC columns exceeds 40%
LOD = Limit of Detection
DL = Detection Limit
J = Estimated result < LOQ and ≥ DL
Q = Surrogate failure
L = LCS/LCSD failure
S = MS/MSD failure

Hexafluoropropylene oxide dimer acid (GenX)	13252-13-6	PFAS by ID SOP	8.3		7.7	3.9	1.9	ng/L	1
4,8-dioxa-3H-perfluorononanoic acid (ADONA)	919005-14-4	PFAS by ID SOP	3.7	J	7.7	3.9	1.9	ng/L	1
N-ethylperfluoro-1-octanesulfonamidoacetic acid (EtFOSAA)	2991-50-6	PFAS by ID SOP	3.1	J	7.7	3.9	1.9	ng/L	1
N-methylperfluoro-1-octanesulfonamidoacetic acid (MeFOSAA)	2355-31-9	PFAS by ID SOP	3.8	J	7.7	3.9	1.9	ng/L	1
Perfluoro-1-butanesulfonic acid (PFBS)	375-73-5	PFAS by ID SOP	5.5		3.8	1.9	0.96	ng/L	1
Perfluoro-1-decanesulfonic acid (PFDS)	335-77-3	PFAS by ID SOP	2.1	J	3.8	1.9	0.96	ng/L	1
Perfluoro-1-heptanesulfonic acid (PFHpS)	375-92-8	PFAS by ID SOP	6.6		3.8	1.9	0.96	ng/L	1
Perfluoro-1-nonanesulfonic acid (PFNS)	68259-12-1	PFAS by ID SOP	3.3	J	3.8	1.9	0.96	ng/L	1
Perfluoro-1-octanesulfonamide (PFOSA)	754-91-6	PFAS by ID SOP	4.1		3.8	1.9	0.96	ng/L	1
Perfluoro-1-pentanesulfonic acid (PFPeS)	2706-91-4	PFAS by ID SOP	6.2		3.8	1.9	0.96	ng/L	1
