Notes and Definitions

QL-1L	The LCS and/or LCSD recoveries fell below the established control specifications for this analyte. Any result for this compound is qualified and should be considered biased low.
QL-1H	The LCS and/or LCSD recoveries fell above the established control specifications for this analyte. Any result for this compound is qualified and should be considered biased high.
QL-1H	The LCS and/or LCSD recoveries fell above the established control specifications for this analyte. Any result for this compound is qualified and should be considered biased high.
E	The concentration indicated for this analyte is an estimated value above the calibration range of the instrument. This value is considered an estimate (CLP E-flag).
C-Low	The percent recovery for this analyte fell below the method criteria in the continuing calibration verification (CCV). Results may be biased low.
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

Appendix

H&P Mobile Geochemistry, Inc. is approved as an Environmental Testing Laboratory (Certification # L11-175) in accordance with the DoD-ELAP program. H&P is approved by the State of Arizona under Certification Numbers AZM758 and AZ0779. H&P is approved as an Environmental Laboratory in conformance with the Environmental Laboratory Accreditation Program (CA) for the category of Volatile and Semi-Volatile Organic Chemistry of Hazardous Waste for the following methods:

Certificate# 2741, 2743, 2579, 2754 & 2740 approved for EPA 8260 and LUFT GC/MS
Certificate# 2742, 2745, & 2741 approved for LUFT
Certificate# 2745 & 2742 approved for EPA 418.1

H&P Mobile Geochemistry, Inc. is approved as an Environmental Laboratory in conformance with the National Environmental Accreditation Conference Standards for the category Environmental Analysis Air and Emissions for the following analytes and methods:

Hexachlorobutadiene by EPA TO-15 & TO-14A
1,2,4-Trichlorobenzene by EPA TO-15 & TO-14A
1,2-Dichlorobenzene by EPA TO-15 & TO-14A
Dichlorotetrafluoroethane by EPA TO-14A
1,4-Dichlorobenzene by EPA TO-15 & TO-14A
Benzene by EPA TO-15 & TO-14A
Chlorobenzene by EPA TO-15 & TO-14A
Ethyl benzene by EPA TO-15 & TO-14A
Styrene by EPA TO-15 & TO-14A
Toluene by EPA TO-15 & TO-14A
Total Xylenes by EPA TO-15
1,1,1-Trichloroethane by EPA TO-15 & TO-14A
1,1,2,2-Tetrachloroethane by EPA TO-15 & TO-14A
1,1,2-Trichloroethane by EPA TO-15 & TO-14A
1,1-Dichloroethane by EPA TO-15 & TO-14A
1,1-Dichloroethene by EPA TO-15 & TO-14A
1,2-Dichloroethane by EPA TO-15 & TO-14A
1,2-Dichloropropane by EPA TO-15 & TO-14A
Benzyl Chloride by EPA TO-15 & TO-14A
Bromoform by EPA TO-15
Bromomethane by EPA TO-15 & TO-14A
Carbon tetrachloride by EPA TO-15 & TO-14A
Chloroethane by EPA TO-15 & TO-14A
Chloroform by EPA TO-15 & TO-14A
Chloromethane by EPA TO-15 & TO-14A
cis-1,2-Dichloroethene by EPA TO-15 & TO-14A
cis-1,3-Dichloropropene by EPA TO-15 & TO-14A
Methylene chloride by EPA TO -15 & TO-14A
Tetrachloroethane by EPA TO-15 & TO-14A
trans-1,2-Dichloroethene by EPA TO-15
trans-1,3-Dichloropropene by EPA TO-15 & TO-14A
Trichloroethene by EPA TO-15 & TO-14A
Vinyl chloride by EPA TO -15
2-Butanone by EPA TO-15
4-Methyl-2-Pentanone by EPA TO-15
Hexane by EPA TO-15
Methyl tert-butyl ether by EPA TO-15
Vinyl acetate by EPA TO-15

1,3-Dichlorobenzene by EPA TO-15 & TO-14A
Trichlorofluoromethane by EPA TO-14A
Naphthalene by H&P SOP TO-15/GC-MS
1,2-Dibromoethane (EDB) by EPA TO-15 & TO-14A
1,2-Dibromo-3-chloropropane by EPA TO-15
1,3-Butadiene by EPA TO-15
1,1,2-Trichlorotrifluoroethane by EPA TO-14A
Carbon disulfide by EPA TO-15
1,4-Dioxane by EPA TO-15

This certification applies to samples analyzed in summa canisters.

H&P Mobile Geochemistry Inc.

H&P Project # GIL042114-A1

On the first day of the project, 4/21/14, a purge volume test was completed at each of the soil vapor probe depths (5', 15', 25' and 35'). These were all done properly and it was determined that at the shallower probes, 5' and 15', a purge volume of 3 would be used for the remainder of the locations. At the deeper probes, 25' and 35', a purge volume of 1 would be used.

On the fifth day of sampling, 4/25/14, it was discovered that because of a miscalculation in the pump run times, the shallower probes were not being purged the full 3 purge volumes, but were instead being purged of 2 purge volumes before sample collection.

The client was informed of the error and they concluded that because the purge volume test showed minor variation in the concentrations between the 1 PV and the 3 PV, that the 2 PV was acceptable and advised us to continue with these same purge volumes for the remainder of the project to maintain consistency in the sampling.

The sample log sheets were amended to reflect the proper purge volumes used.

The following changes were made to the log sheet purge volumes:

At the 5' sample depths: 1299 cc changed to 816 cc
At the 15' sample depths: 1444 cc changed to 913 cc

Dave Balkenbush

LABORATORY NARRATIVE
Passive SE GC/MS
Gilbane Company
Workorder# 1504459R1

Five Radiello 130 (Solvent) samples were received on April 25, 2015. The laboratory extracted the charcoal sorbent bed of the passive sampler using carbon disulfide. An aliquot of the extract was injected into a GC/MS for identification and quantification of volatile organic compounds (VOCs).

The mass of each target compound adsorbed by the sampler was converted to units of concentration using the sample deployment time and the sampling rate for each VOC. If sampling rates were calculated by the lab or the manufacturer, the concentration result has been flagged as an estimated value. Results are not corrected for desorption efficiency.

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

The uptake rates were corrected based on average field temperatures if provided. In the absence of field temperatures, the uptake rates determined at 25 deg C were used.

If validated uptake rates were not available, rates were estimated using the chemical's diffusion coefficient in air and the geometric constant of the sampler. Chemicals that are poorly retained by the sorbent over the sampling duration may exhibit a low bias. All concentrations calculated using estimated rates are qualified with a "C" flag.

To calculate ug/m3 concentrations in the Lab Blank, a sampling duration of 10095 minutes was applied. The assumed temperature used for the uptake rate is listed on the data page. If the field temperatures were provided, the rate was adjusted in the same manner as the field samples.

As per project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit.

All Quality Control Limit exceedances and affected sample results are noted by flags. Each flag is defined at the bottom of this Case Narrative and on each Sample Result Summary page.

The workorder was reissued on July 13, 2015 to correct the baseline for 1,2-Dichloroethane in samples 765NP, 764NP, 915NP, 914NP ; for Trichloroethene in samples 765NP, 764NP, 913NP, 914NP and for Tetrachloroethene in samples 765NP, 915NP, 914NP. The manual integration resulted in a change in the reported values.

Definition of Data Qualifying Flags

Nine qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the reporting limit.
UJ- Non-detected compound associated with low bias in the CCV
N - The identification is based on presumptive evidence.
C - Estimated concentration due to calculated sampling rate

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Initial Calibration Narrative

An 11 point initial calibration was analyzed on MSD-10 on 04/27/2015. The curve passed for SOP 100.

ICV- 1 out (Chloromethane: 142% file ID: 10042717sim, STD#2595-231-5.0)

As noted on the accompanying analytical run log, Level 5 was reanalyzed due to anomalous unacceptable linearity for 1,2-Dichloroethane.

All compounds were curved from 0.05ug/mL to 200ug/mL, but there are exceptions. Please refer to ICAL summary for calibration ranges for each compound.

Unit: ug/mL

The analysis based on 2uL injection in slow mode.

Lab File ID: 10042717sim.d
Lab Smp Id: 2595-231-5.0
Analysis Type: SV
Quant Type: ISTD
Operator: gm
Method File: /chem/msd10.i/27Apr2015.b/105r0427.m/105r0427b.m
Misc Info: ,NOTICS

Calibration Date: 27-APR-2015
Calibration Time: 11:01
Client Smp ID: ICV
Level: MED
Sample Type: AIR

		AREA LIMIT			
COMPOUND	STANDARD	LOWER	UPPER	SAMPLE	%DIFF
29 2-Fluorotoluene	216118	108059	432236	226705	4.90

		RT LIMIT			
COMPOUND	STANDARD	LOWER	UPPER	SAMPLE	%DIFF
29 2-Fluorotoluene	10.15	9.65	10.65	10.15	0.00

AREA UPPER LIMIT = +100% of internal standard area.
AREA LOWER LIMIT = - 50% of internal standard area.
RT UPPER LIMIT = + 0.50 minutes of internal standard RT.
RT LOWER LIMIT = - 0.50 minutes of internal standard RT.

COMPOUND	STANDARD	LOWER	UPPER	SAMPLE	%DIFF
29 2-Fluorotoluene	10.15	9.65	10.65	10.15	0.00

AREA UPPER LIMIT = +100% of internal standard area.
AREA LOWER LIMIT = - 50% of internal standard area.
RT UPPER LIMIT = + 0.50 minutes of internal standard RT.
RT LOWER LIMIT = - 0.50 minutes of internal standard RT.

Data File: /chem/msd10.i/27Apr2015.b/10042713sim.d

Date : 27-APR-2015 12:37

Client ID: Level 11

Sample Info: ;2595-224-500>200;Level 11

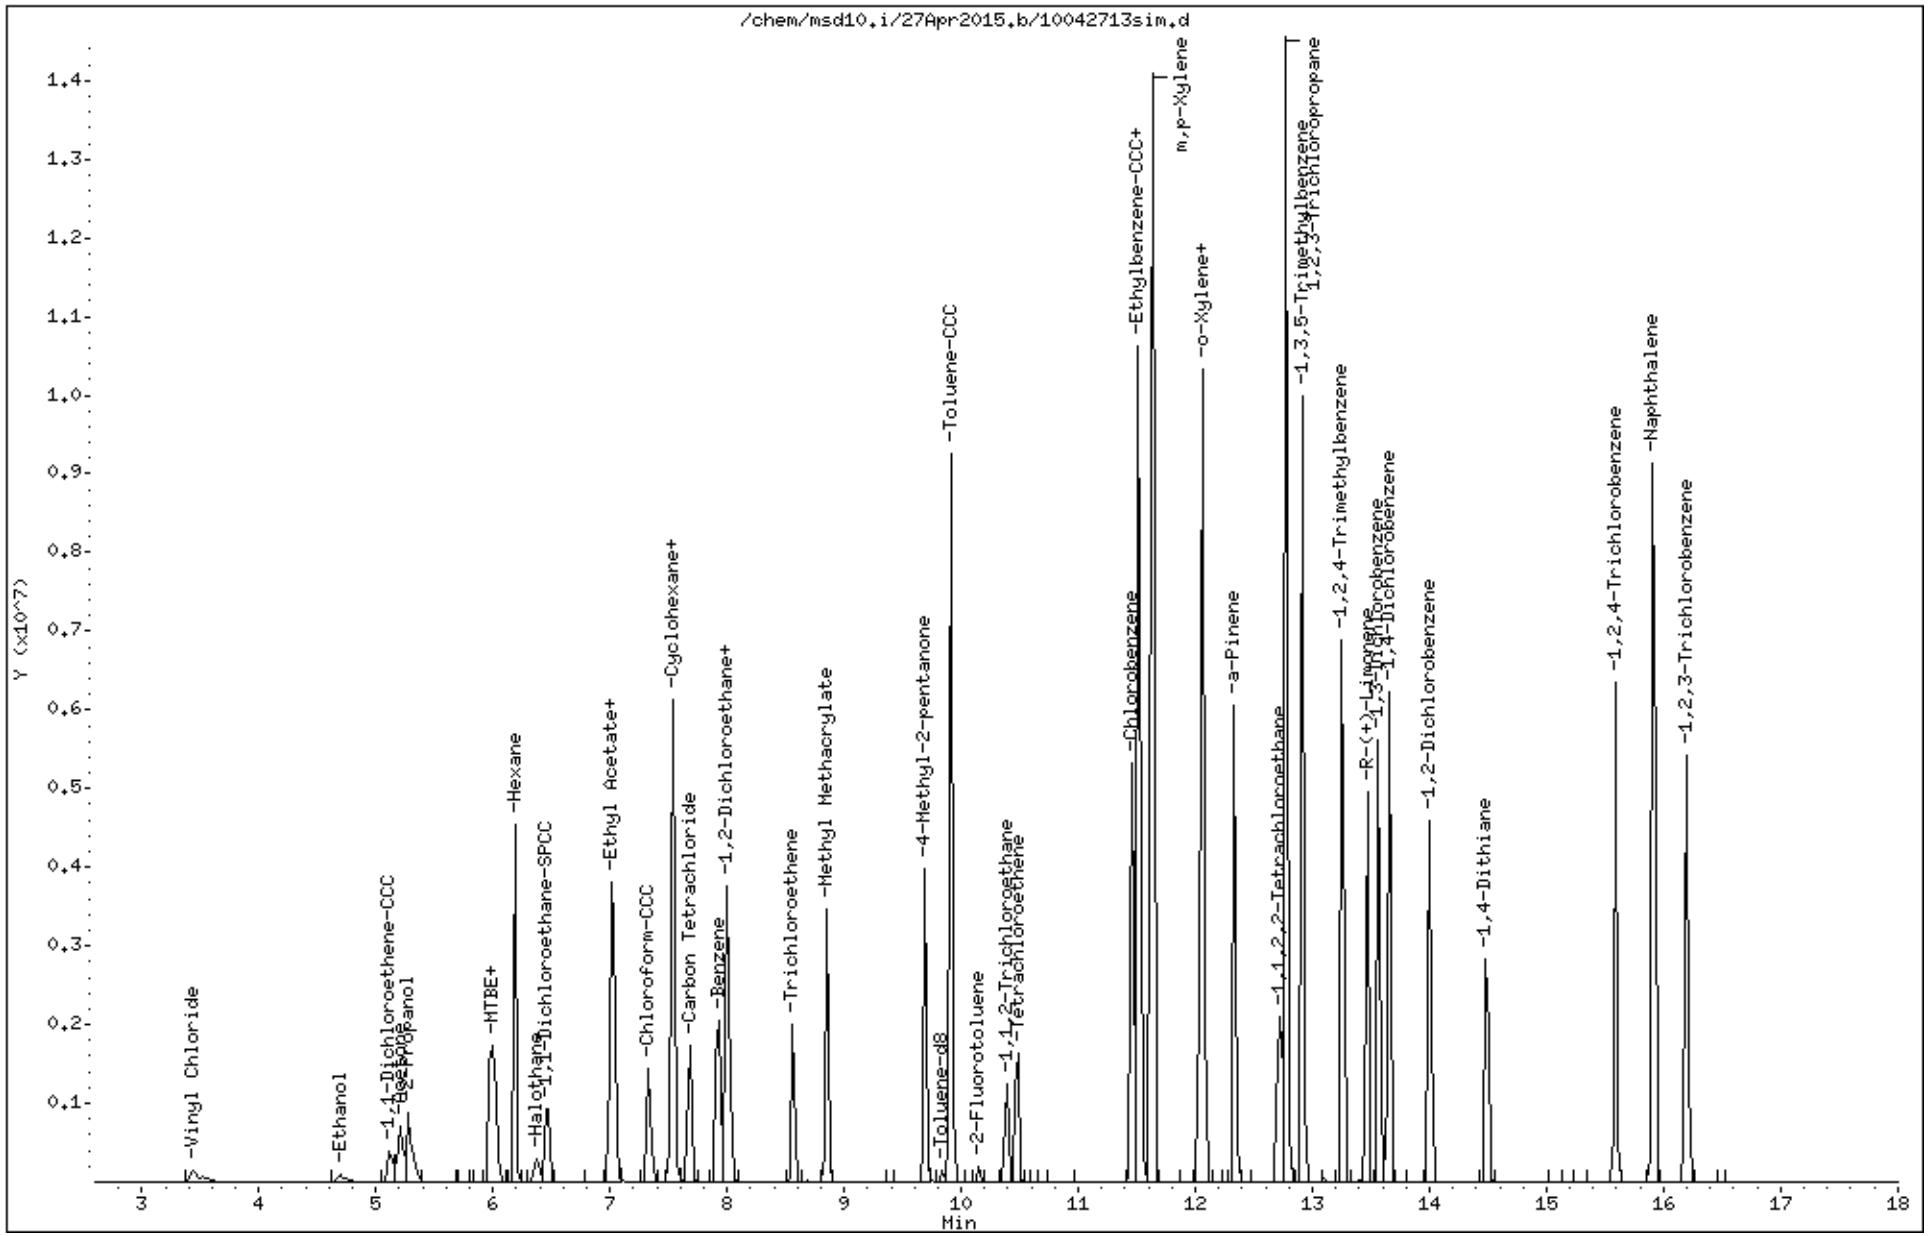
Volume Injected (uL): 1.0

Column phase: DB-5.625

Instrument: msd10.i

Operator: gm

Column diameter: 0.25



Instrument: MSD-10
Analysis: Passive SE GC/MS (Rad 130)
extraction Date: 12/17/14
Std. ID: 2595-199-5-0
(20µL Spiked)
Sample Final Volume: 20mL

Report Date : 18-Dec-2014 07:48

INTERNAL STANDARD COMPOUNDS
AREA AND RT SUMMARY

Instrument ID: msd10.i
Lab File ID: 10042722sim.d
Lab Smp Id: 1504283/459
Analysis Type: SV
Quant Type: ISTD
Operator: gm
Method File: /chem/msd10.i/27Apr2015.b/105r0427.m/105r0427b.m
Misc Info: ,NOTICS

Calibration Date: 27-APR-2015
Calibration Time: 11:01
Client Smp ID: LCS
Level: MED
Sample Type: AIR

		AREA LIMIT			
COMPOUND	STANDARD	LOWER	UPPER	SAMPLE	%DIFF
29 2-Fluorotoluene	216118	108059	432236	240693	11.37

		RT LIMIT			
COMPOUND	STANDARD	LOWER	UPPER	SAMPLE	%DIFF
29 2-Fluorotoluene	10.15	9.65	10.65	10.15	0.00

AREA UPPER LIMIT = +100% of internal standard area.
AREA LOWER LIMIT = - 50% of internal standard area.
RT UPPER LIMIT = + 0.50 minutes of internal standard RT.
RT LOWER LIMIT = - 0.50 minutes of internal standard RT.

Procedure: gm 4/27/15

Procedure for Radiello Extraction

1. Add 80uL of a internal standard and surrogate STD mix (2595-215-125) to all samples, lab Blank and desorption levels
2. Add spike standard (2595-220-500, 20uL) to LCS
3. Add 2mL Carbon Disulfide to all samples, Lab Blank and all desorption levels and shake for 30 minutes.
4. Transfer the extracts to 2mL vials and analyze them.

eurofins | Air Toxics

Eurofins Air Toxics, Inc. Sample Receipt Confirmation Cover Page

Thank you for choosing Eurofins Air Toxics, Inc. (EATL). We have received your samples and have listed any Sample Receipt Descrepancies below.

In order to expedite analysis and reporting, please review the attached information for accuracy.

For corrections call: **Air Toxics, Ltd. at 916-985-1000**

EATL will proceed with the analysis as specified on the Chain of Custody (COC) and Sample Receipt Summary page.

Please note : The Sample Receipt Confirmation, including the total workorder charge, is subject to change upon secondary review. Our aim is to provide a confirmation to you in a timely manner. Sample Receipt Discrepancies, if any, may not include discrepancies regarding sample receipt pressure(s). Additionally, the COC will be provided with the final report.

Sample Discrepancy Report

Identification

Initiated By: MS **Project ID:**20267 **PM**: KV **Date:** 4/27/2015 **Discrepancy Type:** ☐ **1.** ☒ **2.** ☐ **3.**

Workorder(s) affected:1504459 **Sample(s) affected:** 01A-05A

1. Sample Receipt Discrepancies

Narration Not Required:

1.1. ☐ Sample container (cartridge/tube/VOA vial) was received broken, however sample was intact.
1.2. ☐ No brass cap on canister.
1.3. ☐ Date of Collection noted on first sample, but no arrow down to indicate all samples.

Notify Lab for further determination:

1.4. ☐ Tedlar bag received with minimal volume.

Initials: _____ Date: _____

Narration Required in Lab Narrative and Sample Confirmation:

1.5. ☐ COC was not filled out in ink.
1.6. ☐ COC improperly relinquished / received.
1.7. ☐ Sample tags / can numbers do not match the COC.
1.8. ☐ Sample date ☐ error / ☐ missing on COC but noted on sample tag (check one).
1.9. ☐ Custody Seal on the outside of the container was ☐ broken / ☐ improperly placed (check one).
1.10. ☐ ID-none on the sample Tag/Blank
1.11. ☐ Other (describe below).

Describe the Discrepancy: _____

2. Sample Receipt/Screening Discrepancies requiring PM notification

Document on Cover Page of Sample Receipt Confirmation and in Receiving Notes of Lab Narrative

If Section II. is filled out PM must be notified within 24 hrs of initiation

2.1. ☐ COC was not received with samples.
2.2. ☐ Analysis method(s) is ☐ not specified / ☐ incorrectly specified (check one) on the COC.
2.3. ☐ Incorrect sampling media / container for analysis requested.
2.4. ☐ Number of samples on the COC does not match the number of samples that were received.
2.5. ☐ Samples were received expired.
2.6. ☐ Sampling date (time for sulfur) is not documented for ☐ *some* / ☐ *any* samples (check one).
2.7. ☐ Sample received with amount of H_2O in the Tedlar Bag.
2.8. ☐ Sample cannot be analyzed. Container was ☐ received broken / ☐ leaking / ☐ flat / ☐ defective.
2.9. ☐ Tedlar bag / canister received emitting a strong odor; Sample ☐ can / ☐ cannot (check one) be analyzed.
2.10. ☐ Tedlar Bag for Sulfur analysis has metal fitting.
2.11. ☐ Environmental Supply Company valves
2.12. ☐ Sorbent samples-sampling volume was not provided
2.13. ☐ Flow controller used – canister samples received at ambient or under pressure.
2.14. ☐ Canister was at ambient pressure at time of pressurization and (check all that apply):
- ☐ Canister failed leak check on two manifolds,
- ☐ Canister valve was open,
- ☐ Brass nut was loose/not present.
- ☐ Sample can be analyzed
- ☐ Cannot be analyzed

2.15. ☐ Canister sample received with a vacuum difference >5.0"Hg between the receipt vac. And the final vac. reported on the COC, indicating loss of vacuum.
2.16. ☐ Canister sample received at >15"Hg (*not* identified as a Trip/Field Blank).
2.17. ☐ Canister Trip Blank received at low vacuum (<25"Hg).
2.18. ☒ Sorbent Sample received outside method required temperature of 2°C to 6°C; ☐ ice / ☒ blue ice (check one) was present. A temp. Blank ☐ was / ☒ was not present (check one).
2.19. ☐ Flow Controller RPD of = 20% was not met.
2.20. ☐ Other (describe below)

Initials: **MS** **Date:** **4/27/2015** **Notify Receiving:** ☐ **Notify PM:** ☐

Describe the Discrepancy: Temperature of samples at receivinf was measured to be 8.2 C

3. Lab Discrepancies requiring Team Leader/PM notification

Document in Analytical Notes of Lab Narrative

If Section III. is filled out PM must be notified within 24 hrs of initiation

3.1. ☐ Tedlar Bag found to be leaking at the time of analysis; sample ☐ can / ☐ cannot (check one) be analyzed.

3.2. ☐ Tedlar Bag found to be flat/low volume; sample cannot be analyzed.

3.3. ☐ Sulfur samples received with insufficient time to analyze prior to expiration.

3.4. ☐ Canister found to be leaking at the time of analysis.

3.5. ☐ VOST tube saturated; bag dilution necessary.

3.6. ☐ Sample loss due to instrument malfunction / broken glassware.

3.7. ☐ Low/high surrogate recoveries noted in QC/sample(s) for extractable samples.

3.8. ☐ Reporting Limit was raised.

3.9. ☐ Post weight > Pre weight in field/lab Blank for PM10/TSP samples.

3.10. ☐ Other (describe below).

Initials: _____ **Date:** _____ **Notify Receiving:** ☐ **Notify PM:** ☐ _____

Team Lead Initials: _____ **Date:** _____

Describe the Discrepancy: _____

_____

_____

How Does this Affect Client: _____

_____

_____

Project Manager Use Only

Project Manager Notification ☒ **Section 2 Complete** ☐ **Section 3 Complete**

Action:

☒ It is not necessary to notify the client. Narrate the discrepancy in Receiving Notes/Analytical Notes of Lab Narrative.

PM Initials:KCB Date: 4/28/2015

☐ Client notification required. See attached client contact / email, or comments below:

Client Notification:

PM Initials:_____ Person notified: _____ Date: _____

☐ Waiting for Client Reply

Comments: _____

_____

☐ Notify Lab Name: _____ Date: _____ **Notify Receiving:** ☐ _____

☐ **Additional notifications attached.**

LABORATORY NARRATIVE
Passive SE GC/MS
Gilbane Company
Workorder# 1504309R2

Nine Radiello 130 (Solvent) samples were received on April 18, 2015. The laboratory extracted the charcoal sorbent bed of the passive sampler using carbon disulfide. An aliquot of the extract was injected into a GC/MS for identification and quantification of volatile organic compounds (VOCs).

The mass of each target compound adsorbed by the sampler was converted to units of concentration using the sample deployment time and the sampling rate for each VOC. If sampling rates were calculated by the lab or the manufacturer, the concentration result has been flagged as an estimated value. Results are not corrected for desorption efficiency.

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

The uptake rates were corrected based on average field temperatures if provided. In the absence of field temperatures, the uptake rates determined at 25 deg C were used.

If validated uptake rates were not available, rates were estimated using the chemical's diffusion coefficient in air and the geometric constant of the sampler. Chemicals that are poorly retained by the sorbent over the sampling duration may exhibit a low bias. All concentrations calculated using estimated rates are qualified with a "C" flag.

To calculate ug/m3 concentrations in the Lab Blank, a sampling duration of 10155 minutes was applied. The assumed temperature used for the uptake rate is listed on the data page. If the field temperatures were provided, the rate was adjusted in the same manner as the field samples.

The workorder was reissued on 5/10/2015 to amend the reporting list and to report estimated values for target compound hits that are below the reporting limit but greater than the method detection limit.

The workorder was reissued on July 17, 2015 for the following reasons:

1) To correct the baseline for 1,2-Dichloroethane in samples 5230-IA01-0415, 5230-FB01-0415, 5211-CS01-0415, 5234-CS01-0415; for Trichloroethene in samples 5230-FB01-0415 and for Tetrachloroethene in sample 5230-IA01-0415. The manual integrations resulted in a change in the reported values.
2) To report the correct results for Trichloroethene in sample 5227-IA02-0415.

Definition of Data Qualifying Flags

Nine qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not

performed).

J - Estimated value.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the reporting limit.
UJ- Non-detected compound associated with low bias in the CCV
N - The identification is based on presumptive evidence.
C - Estimated concentration due to calculated sampling rate

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Initial Calibration Narrative

An 11 point initial calibration was analyzed on MSD-C on 04/15/2015. The curve passed for SOP 100.

ICV- 1-out (Chloromethane at 155%), file ID: C041515sim, STD#2595-231-5.0

All compounds were curved from 0.05ug/mL to 200ug/mL, but there are exceptions. Please refer to ICAL summary for calibration ranges for each compound.

2-Propanol was not included in the ICAL.

Unit: ug/mL

The analysis based on 2uL injection in slow mode.

Eurofins Air Toxics, Inc. **MSD-C** **Logbook #: 2711**

BFB Injection Date: 4/15/15
BFB Injection Time: 0811
BFB File ID: C041501

IS/S Std.#: 2595-215-125	Exp. Date: 8/20/15
2-Fluorotoluene	SIM: 318479

Verified CCV IS vs ICAL mid-point (-50% to +100% D) gmv *initials*

Calculation Check:

µg/L of compound $= \frac{Area_{Sample}}{Area_{IS}} \times \frac{Conc._{IS}}{RRF} \times DF = \frac{(145408)}{(240216)} \times \frac{(5.0)}{(0.59889)} \times 1.00 = 5.05$ µg

File ID: C041515SIM
Compound: MTBE
Initials: gmv

Reported Result 5.05 µg

Eurofins Air Toxics Inc.

INTERNAL STANDARD COMPOUNDS
AREA AND RT SUMMARY

Instrument ID: msdc.i
Lab File ID: c042305sim.d
Lab Smp Id: 1504275/309/364/379
Analysis Type: SV
Quant Type: ISTD
Operator: gm
Method File: /chem/msdc.i/23Apr2015.b/C15r0415.m/C15r0415b.m
Misc Info: ,NOTICS

Calibration Date: 23-APR-2015
Calibration Time: 09:09
Client Smp ID: LCSD
Level: MED
Sample Type: AIR

		AREA LIMIT			
COMPOUND	STANDARD	LOWER	UPPER	SAMPLE	%DIFF
27 2-Fluorotoluene	324554	162277	649108	277701	-14.44

		RT LIMIT			
COMPOUND	STANDARD	LOWER	UPPER	SAMPLE	%DIFF
27 2-Fluorotoluene	10.99	10.49	11.49	10.99	0.00

AREA UPPER LIMIT = +100% of internal standard area.
AREA LOWER LIMIT = - 50% of internal standard area.
RT UPPER LIMIT = + 0.50 minutes of internal standard RT.
RT LOWER LIMIT = - 0.50 minutes of internal standard RT.

Procedure: gw 4/23/15

Procedure for Radiello Extraction

1. Add 80uL of a internal standard and surrogate STD mix (2595-215-125) to all samples, lab Blank and desorption levels
2. Add spike standard (2595-220-500, 20uL) to LCS
3. Add 2mL Carbon Disulfide to all samples, Lab Blank and all desorption levels and shake for 30 minutes.
4. Transfer the extracts to 2mL vials and analyze them.

Eurofins Air Toxics, Inc. Sample Receipt Confirmation Cover Page

Thank you for choosing Eurofins Air Toxics, Inc. (EATL). We have received your samples and have listed any Sample Receipt Descrepancies below.

In order to expedite analysis and reporting, please review the attached information for accuracy.

For corrections call: **Air Toxics, Ltd. at 916-985-1000**

EATL will proceed with the analysis as specified on the Chain of Custody (COC) and Sample Receipt Summary page.

Please note : The Sample Receipt Confirmation, including the total workorder charge, is subject to change upon secondary review. Our aim is to provide a confirmation to you in a timely manner. Sample Receipt Discrepancies, if any, may not include discrepancies regarding sample receipt pressure(s). Additionally, the COC will be provided with the final report.

1.0 ANALYTICAL PROGRAM

Gilbane Federal (Gilbane) has prepared this Data Quality Summary Report (DQSR) on behalf of the United States Environmental Protection Agency (EPA) Region 9, as part of the remedial investigation (RI) being conducted for the Southern Avenue Industrial Area Superfund Site (SAIA), South Gate, California. Gilbane is conducting the RI at SAIA under EPA Contract EP-S9-08-03, Task Order 0063. This DQSR encompasses groundwater, soil, soil gas, and indoor air samples collected between June of 2011 and April of 2017. This DQSR reconciles the chemical data with the project data quality objectives (DQOs) for the RI, as presented in the RI/Feasibility Study (FS) Sampling and Analysis Plan (RI/FS SAP; ITSI Gilbane, 2012) and the Vapor Intrusion Sampling and Analysis Plan (VI SAP; Gilbane, 2015a), and establishes the data usability of the dataset.

Table 1 provides a summary of the analytical methods performed on samples collected.

Table 1: Summary of Analytical Methods

METHOD	MATRIX	COMPOUNDS
SOM01.2/SOM2.2 CVOL	GW/SO	CLP Volatile organic compounds (VOCs)
EPA 524.2	GW	VOCs
SOM01.2/SOM02.2 CSVOL	GW/SO	CLP Semivolatiles (SVOCs)
SOM01.2/SOM02.2 SIMSVOL	GW/SO	1,4-Dioxane
SOM01.2 SVOL	GW	1,4-Dioxane
SOM01.2/SOM02.2 CARO	GW/SO	CLP Polychlorinated biphenyls (PCBs)
ISM01.3/ISM02.2 ICPAES	GW/SO	CLP Inductively coupled plasma (ICP) spectrophotometer metals
ISM01.3/ISM02.2 ICPMS	GW	CLP ICP Mass spectrometer (MS) metals
ISM01.3/ ISM02.2 CVAA	GW/SO	CLP Mercury
ISM01.3 SPEC	GW	CLP Cyanide
EPA 300.0	GW	Anions (chloride and sulfate)
EPA 331.0	GW	Perchlorate
EPA 415.3	GW	Total Organic Carbon (TOC)
Standard Methods (SM) 2320B	GW	Alkalinity
SM 2540C	GW	Total Dissolved Solids
EPA TO-15	Air/Soil Gas	VOCs in air
EPA TO-17	Air	VOCs in air

Abbreviations:
EPA = US Environmental Protection Agency
CLP = Contract Laboratory Program
GW = groundwater
SO = soil
SIM = selected ion monitoring

Groundwater or air samples were analyzed for one or more of the above methods. Analyses were conducted in accordance with the following guidance documents:

- *Methods for Chemical Analysis of Water and Wastes* (EPA, 1983).
- *Standard Methods for the Examination of Water and Waste Water, 21st Edition* (American Public Health Association [APHA], 2005).
- *Compendium of Methods for Determination of Toxic Organic Compounds in Ambient Air* (EPA, 1999).
- *EPA Contract Laboratory Program Statement of Work for Organics Analysis, Multi-Media, Multi-Concentration, SOM01.1, May 2005* (EPA, 2005).
- *Modifications Updating SOM01.1 to SOM01.2*, Amended April 11, 2007 (EPA, 2007).
- *EPA Contract Laboratory Program Statement of Work for Inorganic Superfund Methods (Multi-Media, Multi-Concentration)* ISM01.2, January 2010, and *Modifications Updating ISM01.2 to ISM01.3* (EPA, 2010).
- *Final Sampling and Analysis Plan Remedial Investigation/Feasibility Study Southern Avenue Industrial Area Superfund Site, South Gate, Los Angeles County, California* (RI/FS SAP; ITSI Gilbane, 2012).
- *Final Sampling and Analysis Plan Vapor Intrusion Evaluation Southern Avenue Industrial Area Superfund Site, South Gate, Los Angeles County, California* (VI SAP; Gilbane, 2015a).
- *Final Supplemental Sampling and Analysis Plan Vapor Intrusion Evaluation Southern Avenue Industrial Area Superfund Site, South Gate, Los Angeles County, California* (Supplemental VI SAP; Gilbane, 2017).

Soil and groundwater samples were submitted to the EPA Contract Laboratory Program (CLP) network of laboratories or to the EPA Region 9 (R9) Laboratory in Richmond, California. Water quality parameter samples for general chemistry analysis were submitted to R9. Soil gas samples were analyzed by R9 and H & P Mobile Geochemistry, Inc. (H&P), of Carlsbad, California. The indoor air samples were analyzed by R9 and Eurofins Air Toxics, Ltd. (Eurofins), of Folsom, California.

Laboratory reports were submitted a longer definition.to Gilbane as portable document format (pdf) files and are included as attachments to the RI report. Electronic results from each laboratory were uploaded into the Gilbane electronic data management system (eDMS) by sample delivery group (SDG). The eDMS is configured to perform a consistency check between the laboratory data and the chain of custody input information. Gilbane resolved any discrepancies (e.g., non-matching sample identifiers) with the laboratory before the SDG was uploaded. The Gilbane eDMS performed an automated data review on the results and the Gilbane Project Chemist performed a supplemental manual review to meet the requirements for a minimum of a Stage S2BVEM data review for CLP or commercial lab data, and an S2AVEM review for R9 data as defined in the EPA *Guidance for Labeling Externally Validated Laboratory Analytical Data for Superfund Use* (EPA, 2009).

The EPA Region 9 Quality Assurance Office (QAO) data validation contractor performed independent EPA Tier 3 validation on approximately 10% of the CLP organic and metals data. CLP data received at least EPA Tier 1B validation by the EPA QAO or Stage S2BVEM by the Gilbane Project Chemist. The Gilbane Project Chemist performed approximately 10% S3VEM and 90% S2BVEM validation of the vapor intrusion data from the R9 or commercial laboratories. The validators reviewed the analytical data for all test methods in accordance with the following documents, as applicable:

- RI/FS SAP and/or VI SAP.
- *National Functional Guidelines for Inorganic Superfund Methods Data Review* (EPA, 2017a).
- *National Functional Guidelines for Organic Superfund Methods Data Review* (EPA, 2017b).

The data qualification flag definitions and reason codes are presented in Section 1.1 of this DQSR. The validators evaluated and qualified the data using the following analytical quality control (QC) elements:

- Holding time and temperature compliance.
- Initial calibrations (ICAL).
- Initial and continuing calibration verification (ICV/CCV).

- Method blank (MB) contamination.
- Field blank (FB) contamination.
- Laboratory control sample/laboratory control sample duplicate (LCS/LCSD) accuracy and precision.
- Matrix spike/matrix spike duplicate (MS/MSD) accuracy and precision.
- Sample duplicate precision.
- Internal standard (IS) recovery.
- Surrogate recovery.
- Interference check sample recovery (metals only).
- Serial dilution (metals only).
- Instrument tuning and system performance (Tier 3).
- Analyte identification and quantitation (Tier 3).

Stage 2A/2B validation reports are provided as Attachment A. Stage 3 validation reports are proved as Attachment B. EPA Tier 3 validation reports are provided as Attachment C.

1.1 QUALIFIED RESULTS

Data qualifiers are defined in the National Functional Guidelines (EPA, 2017a and 2017b). The final data tables contain the following data qualifiers as appropriate for SAIA RI data:

- *J qualifier* denotes that the analyte was positively identified, but the quantitation is estimated. The analyte was positively identified but the associated numerical value is an estimated value above the method detection limit (MDL) and below the reporting limit (RL). Alternatively, the data validation process may identify that a numerical value should be estimated due to an exceedance of quality control criteria.
- *U qualifier* denotes that the analyte was analyzed for, but reported as not detected by the laboratory. The associated numerical value is at the RL. The results may also be qualified as "U" during the validation process due to blank contamination. In this case, the associated numerical value is at the RL if the original result was reported at a value less than the RL, or at the observed value if original result was reported at a value greater than the RL.
- *UJ qualifier* denotes that the associated reporting limit may be inaccurate or imprecise.
- *R qualifier* denotes that the data are unusable due to deficiencies in the ability to analyze the sample and meet QC criteria.

A qualifier may be applied to a result for more than one reason. For example, a result that was qualified as estimated, "J", because the analysis was conducted beyond the allowed holding time, may also be qualified due to an identified problem with the instrument calibration. The reason for each data qualifier is provided in the reason code fields of the qualified results tables found in the data validation reports provided as Attachments A and B. The following subsections discuss the quality of the data and reasons for qualifications. Significant data quality issues (i.e., those resulting in data rejection) are discussed in Section 2.0.

1.2 ESTIMATED LOW CONCENTRATIONS

The analytical laboratories reported detected analyte concentrations to the MDL, and non-detected concentrations to the RL. Detected concentrations between the RL and the MDL are qualified as estimated, "J", because of the increased quantitative uncertainty in the result as the concentration of the analyte approaches the MDL. A total of 1,439 out of 63,151 field sample and duplicate results were qualified as estimated with reason code "TR" due to trace concentrations measured between the MDL and the RL.

Qualification of results as estimated due to low concentrations of analytes is expected due to the sensitivity of the analytical methods used and the low concentrations of many analytes. Qualification for low concentrations is not due to method performance or analytical program issues. Results remain usable with qualification, and data usability is not affected.

1.3 SAMPLE SHIPMENT, RECEIPT, STORAGE AND PRESERVATION

As soil and water samples were collected in the field, they were preserved immediately by cooling to the specified temperature range of 2 to 6 degrees Celsius (°C). The soil gas and indoor air samples did not require cooling. Samples were shipped by overnight carrier directly to the specified laboratories, with the exception of some of the soil gas samples, which were hand-delivered to H&P. Thirty-six primary soil sample results and three associated field duplicate results for mercury, one trip blank for VOCs, and one equipment blank for VOC and SVOCs were qualified as estimated, "J," with a reason code of "T" for temperature receipt exceedances, affecting a total of 208 results out of 63,151. No other samples were received at temperatures outside the specified temperature range.

Upon receipt by the laboratory, samples were immediately entered into the laboratory's data management system, and water and soil samples were stored under refrigeration. No sample results were qualified due to improper sample shipment or storage for this event.

1.4 HOLDING TIME

Thirteen groundwater samples for 1,4-dioxane and one equipment blank (EB) for SVOCs were qualified "J" or "UJ" for an estimated value or reporting limit, with a reason code of "H2," due to an exceedance of the preparation holding time, representing 81 results out of a total of 63,151. The results for one water sample for VOCs were qualified "J" or "UJ" for an estimated value or RL, with a reason code of "H1," due to an analytical holding time exceedance, representing 51 results out of a total of 63,151. No other analytical or preparation holding time exceedances were noted. The data are usable as qualified.

1.5 LABORATORY AND FIELD BLANK CONTAMINATION

Low levels of target analytes were detected in some laboratory and field blanks due to ambient contamination. The sensitivity of modern analytical methods increases the likelihood of detections of low-level contamination. Sources of low-level contamination are difficult to identify, but common sources include dust, volatile organic compounds gradually released from manufactured plastics, and building materials. A total of 1,077 inorganic or organic results out of a total of 63,151 results were qualified "U" or "UJ" for not detected at the RL or at the observed value in the sample due to laboratory or field blank contamination. The following summarizes the types of blank contamination qualified for the SAIA RI:

- 391 water results for method and/or calibration blanks (reason codes "B1", "B2", and "B5").
- 616 soil results for method and/or calibration blanks (reason codes "B1," "B2," and "B5").
- 5 indoor air results for method blanks (reason code "B1").
- 5 water results for laboratory storage blanks (reason code "K4").
- 63 water results for equipment, field, and trip blanks (reason codes "K1," K2," and "K3").

Concentrations of analytes detected in the blanks are not sufficiently high for any associated sample results to be rejected. The identified low-level contamination is not sufficient to affect the data usability.

1.6 CALIBRATION

Instrument calibrations were performed in accordance with specified EPA methodology. The acceptability of the calibration is determined by the measurement of method-specific statistical parameters. During analysis, an instrument may have a calibration that is outside the acceptance limit. Analytical results associated with a calibration that is later determined to be outside the acceptance limit will have increased uncertainty. Depending on the magnitude and nature of the calibration failure, results may be qualified. The validators reviewed the initial and continuing calibrations for each SDG reviewed at Tier 1B (S2BVEM) or higher. Out of 63,151 results, 16 VOC results were qualified "J" or "UJ" for an estimated value or RL, with a reason code of "G1," due to ICAL relative standard deviation (RSD) exceedances. Four-hundred and six results were qualified "J" or "UJ" for an estimated value or RL, with a reason code of "G2" for ICV RSD exceedances or "C11" for CCV RSD exceedances. Four soil gas VOC samples were qualified "J" for an estimated value, with a reason code of "E," due to calibration linear range exceedances. Nine water VOC results were qualified "R" due to low CCV relative response factors (RRFs, reason code "C10"). Details concerning the rejected data are presented in Section 2.0.

Given the number and types of analytes that are measured in this program, the number of results qualified as estimated "J" or "UJ" due to calibration issues is minimal. The estimated results are usable as qualified. The usability of the rejected data is discussed in Section 2.0.

1.7 QUANTITATION LIMIT STANDARD

Quantitation limit standards are sensitivity verification standards analyzed at or below the RL after an ICAL. The evaluation of the quantitation limit standard recovery may indicate that there is greater uncertainty at the lower end of the of the calibration curve. One result analyzed for naphthalene was qualified "UJ" for an estimated RL, with a reason code of "X2," for a quantitation limit standard recovery criteria exceedance. Data usability is not affected.

1.8 SURROGATES AND INTERNAL STANDARDS

Surrogate compounds and internal standards are control compounds used to monitor the analytical process as specified in EPA methodology. The evaluation of the surrogate recovery and internal standard response may indicate that the accuracy of the result is not within the acceptable method-specific parameters. Depending on the magnitude of the uncertainty, a result may be qualified. A total of 778 results for soil, water, and indoor air samples were qualified "J" or "UJ" for an estimated value or RL, with a reason code of "S," due to surrogate recovery out of criteria. Out of 63,151 total results, 188 soil and soil gas results were qualified as estimated, with a reason code of "I," for internal standard recovery anomalies.

The number of results qualified for surrogate and internal standard recovery issues is consistent with that found in review of similar project data, and these results are usable as qualified. Data usability is not significantly affected.

1.9 SERIAL DILUTION

For metals analysis, a serial dilution test is used to determine if interferences are present during the analysis. The measurement of a metal in an undiluted sample is compared to the measurement of the same metal in a diluted sample (and multiplied by the proper dilution factor). The two results are compared, and if uncertainty is shown then results in associated samples may be qualified. A serial dilution test may be evaluated only when a measurable amount of analyte is present. Only 27 water or soil sample results were qualified as "J" or "UJ," with a reason code of "A," for an estimated result or RL due to serial dilution test results that were outside control limits.

The number of results qualified is minimal, and these results remain usable as qualified. No results were rejected due to serial dilution test issues, and data usability is not significantly affected.

1.10 LABORATORY CONTROL SAMPLES

Laboratory control samples (LCSs) are synthetic samples prepared and analyzed using the same procedures used for normal field samples. Laboratory control samples are used to further

monitor the analytical process for accuracy. Laboratory control sample duplicates (LCSDs) were also analyzed to measure precision.

Given the number and types of analytes that are measured during the SAIA RI sampling events, it is likely that some of the measurements of the LCS samples will occur outside acceptance parameters. A total of 96 results, encompassing all four types of matrices, have been qualified "J" or "UJ" for an estimated value or RL, with a reason code of "L," due to LCS/LCSD anomalies. No data were rejected due to LCS anomalies.

The results, as qualified, are useable for their intended purposes. The number of results qualified is consistent with what is often found in similarly-sized datasets. Data usability is not significantly affected.

1.11 MATRIX SPIKE SAMPLES

Matrix spike samples are field samples to which analytes of interest have been added to monitor the analytical process. One in 20 samples was identified for matrix spike analysis, representing a 5-percent frequency, for all analytical methods other than most general chemistry methods. A total of 188 results have been qualified as "J" or "UJ," with a reason code of "M" or "D2," for an estimated value or RL due to MS accuracy or precision anomalies. One antimony result was qualified as "R," with a reason code of "M," for a rejected value due to low MS recovery. The details of the rejected datum are presented in Section 2.0.

The estimated results are useable as qualified for their intended purpose. The number of results qualified due to potential matrix interference is minimal, and data usability is not significantly affected. The data usability of the rejected datum is discussed in Section 2.0.

1.12 LABORATORY DUPLICATE SAMPLES

As part of its internal quality control checks for precision measurement, the laboratory analyzes and reports laboratory duplicates. Two trace metals results were qualified as "J," with reason code "D1," for estimated values due to laboratory duplicate imprecision. The number of qualified results is minimal and data usability is not affected.

1.13 INSTRUMENT PERFORMANCE AND INTERFERENCE CHECKS

The validators reviewed the gas chromatography/mass spectrometry (GC/MS) instrument tunes and performance checks for the VOC and SVOC analyses for Tier 3 (S3VEM) validation. Out of 63,151 results, no results were qualified due to instrument performance check anomalies. The inductively coupled plasma/mass spectrometry (ICP/MS) tunes also were reviewed, along with interference checks for both the ICP/MS and ICP instruments. Out of 63,169 results, 29 soil results were qualified as estimated, "J," with reason code "O," for interference check anomalies.

1.14 ANALYTE IDENTIFICATION AND QUANTIFICATION

RLs and MDLs were reported for all methods. Results were reported to the laboratory's MDL. The RLs met the project objectives and achievable quantitation limits (QLs) stipulated in the two SAPs cited in Section 1.0 before corrections for dilutions and percent moisture, with the following exceptions:

- The groundwater samples collected at MW16, MW23B, MW59C, SAIA-MW4B, and MW3 for 1,4-Dioxane were analyzed by GC/MS scan mode, resulting in an RL of 2.0 micrograms per liter (ug/L), exceeding the SAP-stipulated QL of 0.5 ug/L. However, the QL was met by the MDL.
- The quantitation limit (QL) for 1,4-Dioxane of 3.6 micrograms per cubic meter (ug/m^3) was exceeded by the RL of 36 ug/m^3 reported in the soil gas sample results analyzed by H&P. In addition, the reported values exceeded the residential soil gas screening criterion of 18.7 ug/m^3. End users of the data should be aware that low-level detections may be masked by the elevated reporting limit.

For indoor air Radiello samples, validated uptake rates were not available for VOCs 1,1,2-trichloroethane, 1,1-dichloroethane, 1,1-dichloroethene, 1,3,5-trimethylbenzene, cis-1,2-dichloroethene, trans-1,2-dichloroethene and vinyl chloride. The rates were estimated using the chemical's diffusion coefficient in air and the geometric constant of the sampler. The associated results in the samples have been qualified as "J" or "UJ" for an estimated value or reporting limit, with reason code "X2," in SDGs 16029B, 1504459R1, and 1504309R2, representing 194 results out of 63,151 total results.

For samples analyzed for PCBs by CLP, the percent difference (%D) between the concentrations on two GC columns must be calculated according to the method. The %D for any detected target analyte should be less than 25.0% to have high confidence in the identification. Seven soil results were qualified "J," with reason code "P1," for estimated results due to column

confirmation %D exceedances. Five of the seven results were trace detections and, as such, already were qualified as estimated; thus data usability is not significantly affected.

2.0 REJECTED RESULTS

The data review and validation process identified a total of only 10 results that were rejected due to analytical performance issues. As noted in Section 1.6, nine results were rejected for CCV RRF anomalies:

- Three field sample results for bromomethane (in samples SAIA-MW5A, SAIA-MW5B, and SAIA-MW6C) were qualified as rejected, "R."
- Four field sample results (in samples SAIA-MW9B-0716, MW56-0716, SAIA-MW9C-0716, SAIA-MW10-0716), one field duplicate associated with SAIA-MW9C-0716, and one trip blank result were qualified as "R" for 1,2,4-trichlorobenzene.

As noted in Section 1.10, one antimony result (in sample SAIA-SB12-05) was qualified as rejected, "R," for low matrix spike recovery.

As none of these analytes are chemicals of concern for SAIA, the loss of the rejected results has minimal impact on project decisions. Although the rejected data are not usable, they represent a very small percentage of the dataset (0.01%). Data usability is not significantly affected.

3.0 FIELD DUPLICATES

Approximately one field duplicate was collected for each ten primary samples for each analytical group, and these samples were analyzed for the same parameters as the normal samples. The RI/FS SAP and VI SAP specify that field duplicate results are in agreement when the RPD between the field duplicate result and the normal sample result is less than 35 when the results exceed the RL, or the absolute difference is less than the RL for concentrations near the RL. Sixty-four sample pairs were compared, representing 6,507 result pairs. Of these 6,507 result pairs, only 65 pairs exceeded the RPD goal of 35%. Over half of the exceedances were for metals in soil and were attributable to the generally nonhomogeneous distribution of metals in that matrix. Three additional results with primary or field duplicate results less than one times the RL had absolute differences greater than the RL and were considered out of criteria. As the effect of field duplicate anomalies on data usability is unknown, advisory reason codes of "D5" were applied, but the results were not qualified. A comparison of field duplicate pairs is presented as Attachment D.

It should be noted that in addition to field duplicates, a soil gas split sample was performed for the April 2014 soil and soil gas monitoring event. The split sample evaluation was presented under separate cover in the *Soil and Soil Gas Monitoring Results, April 2014, Southern Avenue Industrial Area Superfund Site Remedial Investigation/Feasibility Study, South Gate, California, Technical Memorandum* (Gilbane, 2015b), and is not further discussed here. (The result comparisons have been removed from the field duplicate summary report in Attachment D.)

4.0 FIELD DEVIATIONS OR CORRECTIVE ACTIONS

The following deviations from the RI/FS SAP and VI SAP were noted for the SAIA RI sampling:

- The trip blank SAIA-RL04-0314 and equipment blank SAIA-EL01-0314 were collected on March 27, 2014, and received by the laboratory in the same cooler on April 2, 2014, at 17 ºC. This resulted in 101 VOCs and 68 SVOCs–in the TB and EB samples only–being qualified "UJ" (includes one acetone "J" trace result) for temperature exceedance. Also, extraction for SVOC analysis exceeded the 7-day technical holding time by 3 days, and all 68 SVOCs in the EB sample were qualified "UJ" for extraction holding time exceedance. Since most of the TB results and all the qualified EB results were non-detects, false negatives may exist.
- The field blank for the 2016 indoor air sampling event was collected improperly, as shown by the dates of exposure on the COC and by the sample's analytical results, indicating that the field blank was deployed for 7 days. As described in EPA Method TO-17, the accepted method for collecting field blanks for sorbent tubes is to uncap and immediately reseal the cartridge designated as the field blank. No usable field blank results were available for this event. The effect on data usability is unknown.

5.0 CONCLUSIONS AND DATA USABILITY

The analytical methods used for the SAIA RI sampling events were selected to provide quality data sufficient to meet data quality objectives, including comparability to historical data, continuity of the Groundwater Monitoring Program, and adherence to the project sensitivity requirements for soil gas and indoor air sampling.

5.1 QUALITY ASSURANCE/QUALITY CONTROL SAMPLES

Field QC samples for this project included field duplicates, field blanks, equipment blanks, and trip blanks. The field QC samples were collected as specified in the RI/FS SAP and the VI SAP. Laboratory QC included precision and accuracy in the form of analysis of MS/MSD pairs, LCSs, laboratory duplicates, post-digestion spikes, serial dilutions, surrogates, and internal standards at the frequencies specified in the discussion of the methods in Section 1.0 of this DQSR.

Precision: Precision is a measure of the repeatability of a single measurement. The precision of the dataset was assessed by evaluating the RPD between primary and duplicate samples (e.g., spike or lab duplicate samples) or between primary and confirmation sample results. The total number of results qualified as estimated for precision anomalies is 31, which represents less than 0.1% of the 63,151 results comprising the dataset.

Accuracy: Accuracy is a measure of recovery of the actual concentration of a compound. The accuracy of the dataset was assessed by the surrogate, internal standard, ICV, CCV, MS/MSD, post-digestion spike, serial dilution, and LCS percent recoveries, and calibration differences or drifts. The total number of results qualified as estimated for one or more accuracy anomalies is 1,662, which represents 2.6% of the 63,151 results comprising the dataset. One antimony and nine VOC results were rejected for CCV or MS/MSD anomalies, representing less than 0.1% of the 63,151 results comprising the dataset. The estimated results remain useable with qualification. The rejected results are not useable.

Representativeness: Representativeness of the dataset is determined by the degree to which the data represent the samples submitted to the laboratory. Holding times, preservation, blank results, and quantitation issues affect the representativeness of a sample. Out of 63,169 total results in the dataset, 1,530, or 2.4%, were qualified as estimated due to representativeness anomalies. No results were rejected due to issues with representativeness. The dataset is therefore considered representative of the samples submitted to the laboratory.

Comparability: The analytical methods used for analysis affect the comparability of the dataset. The methods used for this project are standard, peer-reviewed methods as determined by the RI/FS SAP and the VI SAP. The specific methods are listed in Section 1.0. The analytical methods used provided units of measure and reporting limits similar to SAIA data from previous investigations.

Completeness: The analytical completeness of the dataset is determined by the number of acceptable primary results after data review. Only the results for primary project samples are used in the calculation to determine the completeness of the data. Out of 53,702 primary sample results, 3,688 results, or 6.9%, were qualified as estimated or not detected at the RL for one or more QC reasons. Out of the 3,688 primary results qualified, 1,079 primary results were qualified for trace values only, and 2,609 primary results, or 4.9% of the primary dataset, were qualified for method performance or analytical QC issues. The results as qualified can be used for their intended purposes. Out of 53,702 primary results, 8 results were rejected. Therefore, the completeness of the analytical dataset is 99.99%, which exceeds the complete goal of 95% presented in the two SAPs.

Field completeness is determined by the number of planned samples collected, shipped, and analyzed. Upon receipt by the laboratory, samples were cross-checked with the chain-of-custody documentation for completeness, and entered into the laboratory's data system. A total of 1,084 out of 1,093 planned primary samples were collected, shipped and analyzed. Seven CPT/Hydropunch samples were not collected as no water was encountered at the planned depths

during the March 2013 event. One soil boring at location SAIA-SB/SG26 met refusal before the bottom depth samples at 35 feet could be collected for soil or soil gas. In addition, the soil gas sample at the 25 feet at soil boring location SAIA-SB/SG-28 could not be collected due to clays in the formation. Therefore, the field completeness for the SAIA RI is 99.2%, which meets the completeness goal of 95%.

5.2 CONCLUSION

The data generated in support of the SAIA RI sampling events meet the project objectives. Overall, as shown in the attached validation reports, there were minor quality control deficiencies affecting the data. However, the data qualified as estimated or non-detect are of acceptable quality, and should be considered usable for their intended purposes. The rejected data, while not usable, are of minimal impact to the project.

AUTOMATED DATA REVIEW SUMMARY for MY9EA8

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by CHEMTECH CONSULTING GROUP, INC., ENGLEWOOD, NJ and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Field Duplicate RPD
- Lab Replicate RPD
- LCS Recovery
- MS Recovery
- Prep Hold Time
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Equipment Blank
- Field Blank
- Initial Calibration Verification
- Material Blank
- MS RPD
- Negative Blank
- Surrogate
- Trip Blank

AUTOMATED DATA REVIEW SUMMARY for MY9EA8

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 28 results (6.76%) out of the 414 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Gilbane reviewed Chemtech lab report, COCs, case narrative, and EXES data review package.

No sample receipt issues or calibration anomalies were noted.

Qualifiers were added for lab blank (B2, B5) detects, field duplicate imprecision (D5), and minor serial dilution (A), interference check (O), and matrix (M) effects.

Negative blank QC outliers were resolved.

C3	
C4	
C5	
C6	
C7	
C8	
C9	

Reasons

Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
D5	Field Duplicate RPD
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomolies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for MY9EB9

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by CHEMTECH CONSULTING GROUP, INC., ENGLEWOOD, NJ and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Lab Replicate RPD
- LCS Recovery
- MS Recovery
- Prep Hold Time
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Equipment Blank
- Field Blank
- Field Duplicate RPD
- Initial Calibration Verification
- Material Blank
- MS RPD
- Negative Blank
- Surrogate
- Trip Blank

AUTOMATED DATA REVIEW SUMMARY for MY9EB9

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 22 results (4.78%) out of the 460 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Gilbane reviewed the Chemtech lab report, COCs, case narrative, and EXES data review package.

No sample receipt issues or calibration anomalies were noted.

Qualifiers were added for lab blank (B2) detects, and minor matrix (M) effects.

Negative blank QC outliers were resolved.

24-Nov-2014

Released by Tom Beer, Project Chemist

Comments

Code	Definition
C1	
C2	
C2S	
C3	
C4	
C5	
C6	
C7	
C8	
C9	

Reasons

Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
D5	Field Duplicate RPD
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomolies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for MY9EF4

Facility: Southern Avenue Industrial Area

Soil Boring Sampling Event, April 2014

Guidance Document:

Contract Laboratory: CHEMTECH CONSULTING GROUP, INC., ENGLEWOOD, NJ

Field Contractor:

Data Review Contractor: Gilbane

SDG: MY9EF4, Certified - 5/14/2014 by wtse

QC Level: S1BVEM

Project Manager: Don Gruber

Data Reviewer: Tom Beer

Data Reviewer Title: Project Chemist

Date of Review Report: November 24, 2014

Second Reviewer:

Completion Date of Second Reviewer:

Samples Included in SDG MY9EF4

Analytical Method/ Leach Method	Normal Soil Samples	Field QC Soil Samples
E200.7/NONE	19	1
SW7471B/NONE	19	1

AUTOMATED DATA REVIEW SUMMARY for MY9EF4

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by CHEMTECH CONSULTING GROUP, INC., ENGLEWOOD, NJ and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Field Duplicate RPD
- Lab Replicate RPD
- LCS Recovery
- MS Recovery
- Prep Hold Time
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Equipment Blank
- Field Blank
- Initial Calibration Verification
- Material Blank
- MS RPD
- Negative Blank
- Surrogate
- Trip Blank

AUTOMATED DATA REVIEW SUMMARY for MY9EF4

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 24 results (5.22%) out of the 460 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Gilbane reviewed the Chemtech lab report, COCs, case narrative, and EXES data review package.

No sample receipt issues or calibration anomalies were noted.

Qualifiers were added for lab blank (B2, B5) detects, and minor interference check (O), and matrix (M) effects.

24-Nov-2014

Released by Tom Beer, Project Chemist

Reason and Comment Code Definitions

Comments

Code	Definition
C1	
C2	
C2S	
C3	
C4	
C5	
C6	
C7	
C8	
C9	

Reasons

Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
D5	Field Duplicate RPD
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomolies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for MY9EF8

Facility: Southern Avenue Industrial Area

Soil Boring Sampling Event, April 2014

Guidance Document:

Contract Laboratory: CHEMTECH CONSULTING GROUP, INC., ENGLEWOOD, NJ

Field Contractor:

Data Review Contractor: Gilbane

SDG: MY9EF8, Certified - 5/2/2014 by wtse

QC Level: S1BVEM

Project Manager: Don Gruber

Data Reviewer: Tom Beer

Data Reviewer Title: Project Chemist

Date of Review Report: November 24, 2014

Second Reviewer:

Completion Date of Second Reviewer:

Samples Included in SDG MY9EF8

AUTOMATED DATA REVIEW SUMMARY for MY9EF8

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by CHEMTECH CONSULTING GROUP, INC., ENGLEWOOD, NJ and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Field Duplicate RPD
- Lab Replicate RPD
- LCS Recovery
- MS Recovery
- Prep Hold Time
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Equipment Blank
- Field Blank
- Initial Calibration Verification
- Material Blank
- MS RPD
- Negative Blank
- Surrogate
- Trip Blank

AUTOMATED DATA REVIEW SUMMARY for MY9EF8

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 21 results (4.57%) out of the 460 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Gilbane reviewed the Chemtech lab report, COCs, case narrative, and EXES data review package.

No sample receipt issues or calibration anomalies were noted.

Qualifiers were added for lab blank (B2) detects, and minor interference check (O), and matrix (M) effects.

Low matrix recoveries and negative blank QC outliers were resolved.

24-Nov-2014

C4	
C5	
C6	
C7	
C8	
C9	

Reasons

Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
D5	Field Duplicate RPD
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomolies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for MY9EJ1

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by CHEMTECH CONSULTING GROUP, INC., ENGLEWOOD, NJ and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Field Duplicate RPD
- Lab Replicate RPD
- LCS Recovery
- MS Recovery
- Prep Hold Time
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Equipment Blank
- Field Blank
- Initial Calibration Verification
- Material Blank
- MS RPD
- Negative Blank
- Surrogate
- Trip Blank

AUTOMATED DATA REVIEW SUMMARY for MY9EJ1

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 29 results (6.30%) out of the 460 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Gilbane reviewed the Chemtech lab report, COCs, case narrative, and EXES data review package.

No sample receipt issues or calibration anomalies were noted.

Qualifiers were added for lab blank (B2, B5) detects, field duplicate imprecision (D5), and minor interference check (O), and matrix (M) effects.

Low matrix recoveries and negative blank QC outliers were resolved.

24-Nov-2014

Released by Tom Beer, Project Chemist

Comments

Code	Definition
C1	
C2	
C2S	
C3	
C4	
C5	
C6	
C7	
C8	
C9	

Reasons

Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
D5	Field Duplicate RPD
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomolies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for MY9EM9

Facility: Southern Avenue Industrial Area

Soil Boring Sampling Event, April 2014

Guidance Document:

Contract Laboratory: CHEMTECH CONSULTING GROUP, INC., ENGLEWOOD, NJ

Field Contractor:

Data Review Contractor: Gilbane

SDG: MY9EM9, Certified - 5/2/2014 by wtse

QC Level: S1BVEM

Project Manager: Don Gruber

Data Reviewer: Tom Beer

Data Reviewer Title: Project Chemist

Date of Review Report: November 24, 2014

Second Reviewer:

Completion Date of Second Reviewer:

Samples Included in SDG MY9EM9

AUTOMATED DATA REVIEW SUMMARY for MY9EM9

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by CHEMTECH CONSULTING GROUP, INC., ENGLEWOOD, NJ and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Field Duplicate RPD
- Lab Replicate RPD
- LCS Recovery
- MS Recovery
- Prep Hold Time
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Equipment Blank
- Field Blank
- Initial Calibration Verification
- Material Blank
- MS RPD
- Negative Blank
- Surrogate
- Trip Blank

AUTOMATED DATA REVIEW SUMMARY for MY9EM9

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 32 results (6.96%) out of the 460 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Gilbane reviewed the Chemtech lab report, COCs, case narrative, and EXES data review package.

No sample receipt issues or calibration anomalies were noted.

Qualifiers were added for lab blank (B2, B5) detects, field duplicate imprecision (D5), and minor interference check (O), and matrix (M) effects.

Low matrix QC outliers were resolved.

24-Nov-2014

Released by Tom Beer, Project Chemist

Reason and Comment Code Definitions

Comments

Code	Definition
C1	
C2	
C2S	
C3	
C4	
C5	
C6	
C7	
C8	
C9	

Reasons

Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
D5	Field Duplicate RPD
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomolies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for Y9EA8

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by KAP TECHNOLOGIES INC., THE WOODLANDS, TX and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Field Duplicate RPD
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Equipment Blank
- Field Blank
- Initial Calibration Verification
- Lab Replicate RPD
- Material Blank
- Negative Blank
- Trip Blank

AUTOMATED DATA REVIEW SUMMARY for Y9EA8

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 85 results (3.66%) out of the 2322 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Gilbane reviewed the KAP Tech lab report, COCs, case narrative, and EXES data review package.

No sample receipt or calibration issues were noted.

Qualifiers were added for lab blank (B1, B5) detects, poor surrogate recoveries (S), and minor internal standards recoveries (I) and matrix (M) effects.

17-Nov-2014

Released by Tom Beer, Project Chemist

Reason and Comment Code Definitions

Comments

Code	Definition
C1	
C2	
C2S	
C3	
C4	
C5	
C6	
C7	
C8	
C9	

Reasons

Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
D5	Field Duplicate RPD
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomolies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for Y9EF4

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by KAP TECHNOLOGIES INC., THE WOODLANDS, TX and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Field Duplicate RPD
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Equipment Blank
- Field Blank
- Initial Calibration Verification
- Lab Replicate RPD
- Material Blank
- Negative Blank
- Trip Blank

AUTOMATED DATA REVIEW SUMMARY for Y9EF4

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 68 results (2.64%) out of the 2580 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Gilbane reviewed the KAP Tech lab report, COCs, case narrative, and EXES data review package.

Qualifiers were added for calibration anomalies (C11), but no sample receipt issues were noted.

Qualifiers were also added for lab blank (B1, B5) detects, poor surrogate recoveries (S), and minor matrix (M) effects.

19-Nov-2014

Released by Tom Beer, Project Chemist

Reason and Comment Code Definitions

Comments

Code	Definition
C1	
C2	
C2S	
C3	
C4	
C5	
C6	
C7	
C8	
C9	

Reasons

Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
D5	Field Duplicate RPD
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomolies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for Y9EJ1

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by KAP TECHNOLOGIES INC., THE WOODLANDS, TX and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Field Duplicate RPD
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Equipment Blank
- Field Blank
- Initial Calibration Verification
- Lab Replicate RPD
- Material Blank
- Negative Blank
- Trip Blank

AUTOMATED DATA REVIEW SUMMARY for Y9EJ1

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 72 results (2.79%) out of the 2580 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Gilbane reviewed the KAP Tech lab report, COCs, case narrative, and EXES data review package.

Qualifiers were added for calibration anomalies (C11), but no sample receipt issues were noted.

Qualifiers were also added for lab blank (B1, B5) detects, poor surrogate recoveries (S), and minor matrix (M) effects.

25-Nov-2014

Released by Tom Beer, Project Chemist

Reason and Comment Code Definitions

Comments

Code	Definition
C1	
C2	
C2S	
C3	
C4	
C5	
C6	
C7	
C8	
C9	

Reasons

Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
D5	Field Duplicate RPD
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomolies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

Analytical Method/ Leach Method	Field QC Water Samples
E200.7/NONE	1
SW7470A/NONE	1

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by BONNER ANALYTICAL TESTING COMPANY, HATTIESBURY, MS and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

Blank
Blank - Negative
Equipment Blank
LCS Recovery
Prep Hold Time
Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

Ambient Blank
Calibration Blank
Calibration Blank - Negative
Continuing Calibration Verification
Field Blank
Field Duplicate
Initial Calibration Verification
Lab Replicate RPD
Material Blank
MS Recovery
MS RPD
Negative Blank
Surrogate
Trip Blank

A representative sampling or ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 8 results (34.78%) out of the 23 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. Trace values are not counted as qualified results in the above count. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Reviewer checked Bonner Lab report, EXES QC summary, COC as received, and lab EDD.

Analytical Method	Comment
E200.7	Sample MYAB41 is the equipment blank for this soil sampling event. All results by E200.7 (and SW7470A) are reported as NDs, so no data qualification is warranted in the associated soil samples.
SW7470A	Only one mercury ND result generated. No data qualification required. See E200.7 comments for data review details.

Reason Code Definitions

Code	Definition
B1	The analyte was found in an associated method blank.
B5	The analyte was found in an associated blank as well as in the sample.
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

Reason Code Definitions

Code	Definition
B1	The analyte was found in an associated method blank.
B2	Calibration Blank
B5	The analyte was found in an associated blank as well as in the sample.
D1	Lab Replicate RPD
D5	Field duplicate precision
M	Matrix spike recovery was outside established criteria.
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by CHEMTECH CONSULTING GROUP, INC., ENGLEWOOD, NJ and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Equipment Blank
- Field Duplicate
- LCS Recovery
- Prep Hold Time
- Surrogate
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Field Blank
- Initial Calibration Verification
- Lab Replicate RPD
- Material Blank
- MS Recovery
- MS RPD
- Negative Blank
- Trip Blank

A representative sampling or ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 37 results (3.59%) out of the 1032 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. Trace values are not counted as qualified results in the above count. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Reviewer checked Chemtech Lab report, EXES QC summary, COC as received, and lab EDD.

Analytical Method	Comment
CSVOL12	7 soil samples and 1 equipment blank for SOM02.4 SVOCs.
CVOL	7 soil samples and 1 equipment blank for SOM02.4 CVOL analysis.
SW8082	7 soil samples and 1 equipment blank for SOM02.4 CLP Aroclors analysis.

Review Questions

Method: E200.7

Review Questions	Yes	No	NA	Comment
Stage 2 Review: COC - Custody Trail?	•			Custody seals missing per case narrative, login form says intact. COCs signed where relinquished and received.
Stage 2 Review: COC - Temperature/Condition?	•			Samples on ice, received at 4 deg. C. Sample MYAB38 (SAIA-SB47-15) jar broken, soil saved in sealed bag.
Stage 2 Review: COC - Receipt anomalies?	•			No anomalies noted.
Stage 2 Review: COC - Sample/Methods checked?	•			Analyses on COC specified as "CLP ICP-AES Metals + Hg"
Stage 2 Review: Case Narrative - Anomalies?	•			Sample MYAB34 (SAIA-SG47-0.5) was organic aliquot in 8-oz jar. Run for ICP-AES metals.
Stage 2 Review: Samples - Collection date?	•			All samples collected on 4/26/2017
Stage 2 Review: Samples - Extraction date?	•			Samples extracted 5/4/2017.
Stage 2 Review: Samples - Analysis date?	•			Samples analyzed 5/9/2017.
Stage 2 Review: Samples - Holding time?	•			All soil samples analyzed within 6 month holding time.
Stage 2 Review: Samples - Batching?	•			Batch B719020
Stage 2 Review: Samples - Lab qualifiers?	•			All detected Sb/Cu results qualified J*/* for poor/elevated matrix spike recovery. All Be detects qualified J* for serial dilution %D.
Stage 2 Review: Calibration - ICAL?	•			ICAL on 5/9/2017. All %D acceptable.
Stage 2 Review: Calibration - ICV?	•			ICV01 98-106 %R good.
Stage 2 Review: Calibration - CCV?	•			CCV01, 02, 03 101-109 %R and 0-2 %RSD good.
Stage 2 Review: Blank - Method blank?	•			PB01 Be and K U-flag [DQR B5] at RL. ICB/CCB Be, Cd, and Na U-flag [B2] at RL
Stage 2 Review: Blank - Trip blank?	•			
Stage 2 Review: Blank - Equipment blank?	•			EB MYAB41 all ND, no quals.
Stage 2 Review: Precision/Accuracy - MS/MSD?	•			Source MYAB27 (SAIA-SG46-0.5). All Sb/Cu detects qualified J for matrix interference [M].
Stage 2 Review: Precision/Accuracy - LCS/LCSD?	•			All LCS %R acceptable within 80 - 120.
Stage 2 Review: Quantitation - PQLs?	•			MDL check run 4/28/2017. All MDLs acceptable.
Stage 2 Review: Quantitation - Dilution Factor?	•			Serial dilution for Be 11%D in soil. No data qual. warranted.
Stage 2 Review: Quantitation - Results (i.e. correct analytes)?	•			Target analyte list correct.
Stage 2 Review: Field Duplicates - RPD within limits?	•			Duplicate pairs MYAB27/28 and MYAB35/36. Pb in MYAB35/36 >50 RPD, qualified J [D5]. All lab replicate MYAB27D RPDs <35, no quals.

Review Questions

Method: SW7471B

Review Questions	Yes	No	NA	Comment
Stage 2 Review: COC - Custody Trail?	•			
Stage 2 Review: COC - Temperature/Condition?	•			
Stage 2 Review: COC - Receipt anomalies?	•			No anomalies noted
Stage 2 Review: COC - Sample/Methods checked?	•			
Stage 2 Review: Case Narrative - Anomalies?	•			None
Stage 2 Review: Samples - Collection date?	•			
Stage 2 Review: Samples - Extraction date?	•			Extracted 5/8/2017
Stage 2 Review: Samples - Analysis date?	•			Analyzed 5/8/2017
Stage 2 Review: Samples - Holding time?	•			28 day holding time met.
Stage 2 Review: Samples - Batching?	•			Batch B719023
Stage 2 Review: Samples - Lab qualifiers?	•			None added except J trace [TR].
Stage 2 Review: Calibration - ICAL?	•			ICAL on 5/8/2017 %D and correlation coeff. good
Stage 2 Review: Calibration - ICV?	•			
Stage 2 Review: Calibration - CCV?	•			
Stage 2 Review: Blank - Method blank?	•			All method blanks ND.
Stage 2 Review: Blank - Trip blank?			•	
Stage 2 Review: Blank - Equipment blank?	•			EB MYAB41 Hg result ND, no quals.
Stage 2 Review: Precision/Accuracy - MS/MSD?	•			
Stage 2 Review: Precision/Accuracy - LCS/LCSD?	•			
Stage 2 Review: Quantitation - PQLs?	•			MDL of 0.020 mg/kg is good.
Stage 2 Review: Quantitation - Dilution Factor?	•			
Stage 2 Review: Quantitation - Results (i.e. correct analytes)?	•			
Stage 2 Review: Field Duplicates - RPD within limits?	•			Duplicate pairs MYAB27/28 and MYAB35/36 Hg RPDs <35, no quals.

MS Mismatch Report

--No Records Found--

Section to identify Matrix Spike mismatches where parent sample differs from MS by dilution.

QC Outlier Report

Test Method: E200.7 Extraction Method: METHOD Leach Method: NONE

QC Element	Sample ID/ Lab Sample ID	Run#/ Dil'n	Analyte	Result (Units)	Qualifier	Warning Limits	Control Limits	Reason	Comment	Rule	Action Level
Blank	-BLK (LB) / -BLK	1 / 1.00	Potassium	78.2 (ug/l)	*U/None	< 34.4	< 5000	B1		10	782
Blank	-BLK (LB) / -BLK	1 / 1.00	Sodium	24.4 (ug/l)	*U/None	< 13.1	< 5000	B1		10	244

Rule is the multiplier used when blank contamination occurs to determine action level.

*Method and Field Blanks will apply J flags when the sample result is greater than the reporting limit for NFG validation.

Qualified Results

Test Method: E200.7 Extraction Method: METHOD Leach Method: NONE

FieldSample ID	LabSample ID	Matrix	Type	Analyte	RL	Lab Result	Qualified Result	Bias	Units	Reason

Review Questions

Method: E200.7

Review Questions	Yes	No	NA	Comment
Stage 2 Review: COC - Custody Trail?	•			COC signed correctly and custody seal in place when received by the lab
Stage 2 Review: COC - Temperature/Condition?	•			Receipt temp. 4 deg. C
Stage 2 Review: COC - Receipt anomalies?	•			No sample receipt anomalies noted
Stage 2 Review: COC - Sample/Methods checked?	•			Sample method "CLP ICP AES Metals + Hg"
Stage 2 Review: Case Narrative - Anomalies?	•			No data QC anomalies noted for sample MYAB41
Stage 2 Review: Samples - Collection date?	•			Equip. blank MYAB41 (SAIA-ER01-0417) collected 4/26/2017.
Stage 2 Review: Samples - Extraction date?	•			Sample MYAB41 extracted 5/4/2017.
Stage 2 Review: Samples - Analysis date?	•			Sample MYAB41 analyzed 5/5/2017.
Stage 2 Review: Samples - Holding time?	•			6 month (mercury 28 days) holding time met for all metals
Stage 2 Review: Samples - Batching?	•			Batch B719002
Stage 2 Review: Samples - Lab qualifiers?	•			Several low estimated J trace results qualifiers.
Stage 2 Review: Calibration - ICAL?	•			ICAL performed 5/5/2017. All %D and instrument response acceptable.
Stage 2 Review: Calibration - ICV?	•			ICV01 all %R acceptable
Stage 2 Review: Calibration - CCV?	•			CCV01, 02, 03, %R acceptable.
Stage 2 Review: Blank - Method blank?	•			Ba and Na detected in ICB01. Detected Na qualified non-detect U B1 at the RL. Al, Ca, Cu, Fe, Mg, Zn, detected in calibration blanks and qualified U at the RL.
Stage 2 Review: Blank - Trip blank?			•	
Stage 2 Review: Blank - Equipment blank?	•			Sample MYAB41 is the equipment blank for this soil sampling event. All results are reported as NDs, so no data qualification is warranted in the associated soil samples.
Stage 2 Review: Precision/Accuracy - MS/MSD?			•	
Stage 2 Review: Precision/Accuracy - LCS/LCSD?	•			LCS %R acceptable.
Stage 2 Review: Quantitation - PQLs?	•			All detection limits are accptable
Stage 2 Review: Quantitation - Dilution Factor?	•			No dilution factors were applied.
Stage 2 Review: Quantitation - Results (i.e. correct analytes)?	•			Target analyte metals are correct.
Stage 2 Review: Field Duplicates - RPD within limits?			•	No field duplicate collected for this QC sample.

MS Mismatch Report

--No Records Found--

Section to identify Matrix Spike mismatches where parent sample differs from MS by dilution.

QC Outlier Report

Test Method: CSVOL12 Extraction Method: SW3520 Leach Method: NONE

QC Element	Sample ID/ Lab Sample ID	Run#/ Dil'n	Analyte	Result (Units)	Qualifier	Warning Limits	Control Limits	Reason	Comment	Rule	Action Level

Review Questions

Method: CSVOL12

Review Questions	Yes	No	NA	Comment
Stage 2 Review: COC - Custody Trail?	•			Custody seals were intact upon receipt and the COC was signed correctly.
Stage 2 Review: COC - Temperature/Condition?	•			The cooler was received at 3.7 deg. C.
Stage 2 Review: COC - Receipt anomalies?	•			COC was revised due to omission of YAB14 sample and YAB15 CLP volatiles analysis, from original hardcopy COC.
Stage 2 Review: COC - Sample/Methods checked?	•			All samples requested for CLP Semivolatiles analysis.
Stage 2 Review: Case Narrative - Anomalies?	•			COC anomalies noted. Sample YAB41 is the EB for the soil sampling event.
Stage 2 Review: Samples - Collection date?	•			Sampled on 4/26/2017.
Stage 2 Review: Samples - Extraction date?	•			Water sample extracted 5/2/2017. All soil samples extracted 5/4/2017.
Stage 2 Review: Samples - Analysis date?	•			Water sample analyzed 5/4/2017. 6 soil samples analyzed 5/6/2017. Sample YAB34 (SAIA-SB47-0.5) analyzed 5/10/2017.
Stage 2 Review: Samples - Holding time?	•			Water sample extracted within 7 days and soil samples analyzed within 14 days holding times.
Stage 2 Review: Samples - Batching?	•			EB sample batch BG026864. 6 soil samples BG026874. Sample YAB34 is BG026935.
Stage 2 Review: Samples - Surrogate recoveries?	•			Low surrogate (DMC) %R for 4-chloroanilene-d4 and 4-methylphenol-d8 in YAB41 (EB), and 1,4-dioxane-d8 in YAB34 (SAIA-SG47-0.5). Qualify 4-chloroanilene, HCCPD, and 3,3'-dichlorobenzidine in YAB41, and 1,4-dioxane in YAB34 UJ [DQ Reason S]. All other surrogate issues resolved and no quals. warranted.
Stage 2 Review: Samples - Lab qualifiers?	•			Estimated J trace (TR) results and JN qualifiers for TICs.
Stage 2 Review: Calibration - ICAL?	•			ICAL run 4/27/2017. All RRFs and %RSDs acceptable
Stage 2 Review: Calibration - ICV?	•			SICV58 on 4/27/2017, all min. RRF and %D acceptable.
Stage 2 Review: Calibration - CCV?	•			CCAL2074 and 2075 on 5/4/2017, all min. RRF and %D acceptable.
Stage 2 Review: Blank - Method blank?	•			Method blanks run on 5/4 and 5/6/2017. All target SVOLs are ND.
Stage 2 Review: Blank - Trip blank?			•	
Stage 2 Review: Blank - Equipment blank?	•			Sample YAB41 is the EB for this soil sampling event. Low level detects of acetophenone (1.6 ug/L) and diethylphthalate (1.7 ug/L) do not warrant soil samples qualification.
Stage 2 Review: Precision/Accuracy - MS/MSD?			•	Not applicable for CLP SVOLs with DMCs in each sample.
Stage 2 Review: Precision/Accuracy - LCS/LCSD?			•	Not applicable for CLP SVOLs with DMCs in each sample.
Stage 2 Review: Quantitation - PQLs?	•			All IS areas and RTs are stable. Most RLs < 250 ug/kg, acceptable.

Review Questions

Method: CSVOL12

Review Questions	Yes	No	NA	Comment
Stage 2 Review: Quantitation - Dilution Factor?	•			Percent solids factors applied to all soils.
Stage 2 Review: Quantitation - Results (i.e. correct analytes)?	•			TCL SVOLs reported for all samples.
Stage 2 Review: Field Duplicates - RPD within limits?	•			All target analytes in field pair YAB35/36 are NDs. No evaluation of precision applicable.

Review Questions

Method: CVOL

Review Questions	Yes	No	NA	Comment
Stage 2 Review: COC - Custody Trail?	•			Custody seals were intact upon receipt and the COC was signed correctly.
Stage 2 Review: COC - Temperature/Condition?	•			Cooler was received at 3.7 deg. C.
Stage 2 Review: COC - Receipt anomalies?	•			COC was revised due to omission of YAB14 sample and YAB15 CLP volatiles analysis, from original hardcopy COC.
Stage 2 Review: COC - Sample/Methods checked?	•			All samples analyzed for CLP Trace Volatiles + 123-TCP.
Stage 2 Review: Case Narrative - Anomalies?	•			COC anomalies noted. Sample YAB41 is the EB for the soil sampling event.
Stage 2 Review: Samples - Collection date?	•			Samples collected on 4/26/2017
Stage 2 Review: Samples - Extraction date?	•			Samples extracted (purged) 4/27/2017, except YAB37 on 5/2/2107.
Stage 2 Review: Samples - Analysis date?	•			Samples analyzed 4/27/2017, except YAB37 on 5/2/2107.
Stage 2 Review: Samples - Holding time?	•			All samples analyzed within 14 day hold time.
Stage 2 Review: Samples - Batching?	•			5 soils in VI051598; YAB37 (SAIA-SB47-5) in VI051671; and EB (ER01/YAB41) in VV001684
Stage 2 Review: Samples - Surrogate recoveries?	•			Low surrogate recoveries for 1,4-dichloroethane-d4 and 1,4-dichlorobenzene-d4, associated results in samples qualified J-/UJ for surrogates out (S).
Stage 2 Review: Samples - Lab qualifiers?	•			Minor estimated results J for acetone and methylene chloride in associated blanks.
Stage 2 Review: Calibration - ICAL?	•			ICAL %RSD failed for 1,1-DCA. No quals for NDs. A DMC RRF failed in ICAL. No quals applied.
Stage 2 Review: Calibration - ICV?	•			A DMC RRF failed in ICV. No quals applied.
Stage 2 Review: Calibration - CCV?	•			A DMC RRF failed in CCVs. No quals applied.
Stage 2 Review: Blank - Method blank?	•			Methylene chloride in YAB37 (SAIA-SB47-5) qualified U at the RL since also detected in storage blank (B1).
Stage 2 Review: Blank - Trip blank?			•	NA for soil samples.
Stage 2 Review: Blank - Field blank?			•	NA for soil samples.
Stage 2 Review: Precision/Accuracy - MS/MSD?			•	Not applicable for CLP CVOLs with DMCs in each sample.
Stage 2 Review: Precision/Accuracy - LCS/LCSD?			•	Not applicable for CLP CVOLs with DMCs in each sample.
Stage 2 Review: Quantitation - PQLs?	•			All IS areas and RTs are stable. Most RLs < 10 ug/kg, acceptable.
Stage 2 Review: Quantitation - Dilution Factor?	•			Percent solids factors applied to all soils.
Stage 2 Review: Quantitation - Results (i.e. correct analytes)?	•			TCL CVOLs reported for all samples.
Stage 2 Review: Field Duplicates - RPD within limits?	•			All target analytes in field pair YAB35/36 are NDs. No evaluation of precision applicable.
