Review Questions	Yes	No	NA	Comment
Stage 2 Review: COC - Custody Trail?	•			Custody seals were intact upon receipt and the COC was signed correctly.
Stage 2 Review: COC - Temperature/Condition?	•			Samples arrived at 3.7 deg. C.
Stage 2 Review: COC - Receipt anomalies?	•			COC was revised due to omission of YAB14 sample and YAB15 CLP volatiles analysis, from original hardcopy COC.
Stage 2 Review: COC - Sample/Methods checked?	•			All samples analyzed for CLP Aroclors.
Stage 2 Review: Case Narrative - Anomalies?	•			None noted
Stage 2 Review: Samples - Collection date?	•			Samples collected on 4/26/2017.
Stage 2 Review: Samples - Extraction date?	•			Water sample extracted 5/2/2017. All soil samples extracted 5/6/2017.
Stage 2 Review: Samples - Analysis date?	•			Water sample analyzed 5/4/2017. Soil samples analyzed 5/11/2017.
Stage 2 Review: Samples - Holding time?	•			All samples analyzed within the 40 days hold time.
Stage 2 Review: Samples - Batching?	•			Water sample (EB) PR018105. Soil samples PR018245.
Stage 2 Review: Samples - Surrogate recoveries?	•			All surrogate recoveries within QC limits.
Stage 2 Review: Samples - Lab qualifiers?	•			Only one estimated trace (JP) Aroclor 1260 result.
Stage 2 Review: Calibration - ICAL?	•			ICAL on 5/3/2017. All RTs and surrogates acceptable.
Stage 2 Review: Calibration - Were Tunes within acceptance criteria including frequency?	•			Analyte IDs (Form 10B) RTs and %D acceptable.
Stage 2 Review: Samples - Internal Standards within acceptance criteria?	•			Analyte IDs (Form 10B) RTs and %D acceptable.
Stage 2 Review: Calibration - ICV?	•			ICV on 5/4/2017. All RTs and %Ds acceptable.
Stage 2 Review: Calibration - CCV?	•			CCV1 and 2, on 5/10-11/2017. All RTs and %Ds acceptable.
Stage 2 Review: Blank - Method blank?	•			Method blank run on 5/4/2017, all NDs.
Stage 2 Review: Blank - Trip blank?			•	
Stage 2 Review: Blank - Equipment blank?			•	Sample YAB41 is the EB for this soil sampling event. All Aroclors are ND at 1 ug/L.
Stage 2 Review: Precision/Accuracy - MS/MSD?	•			MS not run for this SDG. LCS and SDG YAB14 MS acceptable. No data quals. warranted.
Stage 2 Review: Precision/Accuracy - LCS/LCSD?	•			LCS run 5/4/2017. All %R acceptable.
Stage 2 Review: Quantitation - PQLs?	•			All IS areas and RTs are stable. All RLs < 45 ug/kg, acceptable.
Stage 2 Review: Quantitation - Dilution Factor?	•			Percent solids factors applied to all soils.
Stage 2 Review: Quantitation - Results (i.e. correct analytes)?	•			TCL Aroclors reported for all samples.

Review Questions

Method: SW8082

Review Questions	Yes	No	NA	Comment
Stage 2 Review: Field Duplicates - RPD within limits?	•			All target analytes in field pair YAB35/36 are NDs. No evaluation of precision applicable.

Facility:	Southern Avenue Industrial Area
Event:	Spring 2014 Soil Sampling
Guidance Document:	Southern Avenue Industrial Area SAP
Contract Laboratory:	KAP TECHNOLOGIES INC., THE WOODLANDS, TX
Field Contractor:	Innovative Technical Solutions, Inc., Walnut Creek, CA
Data Review Contractor:	
SDG:	Y9EF8, Certified - 5/15/2014 by wtse
QC Level:	S2BVEM
Project Manager:	Don Gruber
Data Reviewer:	Tom Beer

Reissued by Gilbane:	March 26, 2018

Analytical Method/ Leach Method	Normal Soil Samples	Field QC Soil Samples
CSVOL12/NONE	18	2
CVOL/NONE	18	2
SW8082/NONE	18	2

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Southern Avenue Industrial Area SAP to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by Innovative Technical Solutions, Inc., Walnut Creek, CA; analyses were performed by KAP TECHNOLOGIES INC., THE WOODLANDS, TX and were reported under sample delivery group (SDG) Y9EF8. Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

Blank
Blank - Negative
Field Duplicate
LCS Recovery
MS Recovery
MS RPD
Prep Hold Time
Surrogate
Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

Ambient Blank
Calibration Blank
Calibration Blank - Negative
Continuing Calibration Verification
Equipment Blank
Field Blank
Initial Calibration Verification
Lab Replicate RPD
Material Blank
Negative Blank
Trip Blank

A representative sampling or ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 38 results (1.47%) out of the 2580 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. Trace values are not counted as qualified results in the above count. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Gilbane reviewed the KAP Tech lab report, COCs, case narrative, and EXES data review package.

No sample receipt or calibration anomalies were noted.

Qualifiers were added for lab blank (B1, B5) detects, poor surrogate recoveries (S), and minor matrix (M) effects.

The percent moisture and solids for sample SB36-15 were transposed per the EPA Region 9 Data Review Reports.

The detection limits have been corrected in the database, previous data qualifiers for questionable % moisture

Reason Code Definitions

Code	Definition
B1	The analyte was found in an associated method blank.
B5	The analyte was found in an associated blank as well as in the sample.
L	Percent recovery of laboratory control sample recovery was outside established limits
M	Matrix spike recovery was outside established criteria.
S	Surrogate recovery out of criteria (upper or lower limit)
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

AUTOMATED DATA REVIEW SUMMARY for Y9DQ5

Facility: Southern Avenue Industrial Area

Water Wells Sampling Event, March 2014

Guidance Document:

Contract Laboratory: KAP TECHNOLOGIES INC., THE WOODLANDS, TX

Field Contractor:

Data Review Contractor: ESAT/ICF International

SDG: Y9DQ5, Certified - 5/2/2014 by wtse

QC Level: S2VEM

Project Manager: Don Gruber, Gilbane

Data Reviewer: Santiago Lee, ICF

Data Reviewer Title: Validator

Date of Review Report: June 25, 2014

Second Reviewer: Tom Beer, Gilbane

Completion Date of Second Reviewer: December 02, 2014

Samples Included in SDG Y9DQ5

Analytical Method/ Leach Method	Normal Water Samples	Field QC Water Samples
CSVOL12/NONE	7	2
CVOL/NONE	7	3
SW8082/NONE	7	2
SW8270D/NONE	7	2

AUTOMATED DATA REVIEW SUMMARY for Y9DQ5

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by KAP TECHNOLOGIES INC., THE WOODLANDS, TX and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Equipment Blank
- Field Duplicate RPD
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Field Blank
- Initial Calibration Verification
- Lab Replicate RPD
- Material Blank
- Negative Blank

AUTOMATED DATA REVIEW SUMMARY for Y9DQ5

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 197 results (16.24%) out of the 1213 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

The EPA validator reviewed the KAP lab report, COCs, lab case narrative, and EXES data review package.

A sample cooler was delayed resulting in several QC samples only, being qualified for hold time (H2) and temperature (T) exceedances (H2). No calibration anomalies were noted.

Data qualifiers also were added for lab blank (B1) detects, and some matrix interferences (M, D2).

No data were rejected, and all surrogate QC outliers were resolved.

Released by Santiago Lee, ICF, Validator	25-Jun-2014
Released by Tom Beer, Gilbane	02-Dec-2014

Reason and Comment Code Definitions

Comments

Code	Definition
C1	
C2	
C2S	
C3	
C4	
C5	
C6	
C7	
C8	
C9	

Reasons

Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
D5	Field Duplicate RPD
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomolies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for Y9DS0

Facility: Southern Avenue Industrial Area

Water Wells Sampling Event, March 2014

Guidance Document:

Contract Laboratory: KAP TECHNOLOGIES INC., THE WOODLANDS, TX

Field Contractor:

Data Review Contractor: ESAT/ICF International

SDG: Y9DS0, Certified - 5/30/2014 by wtse

QC Level: S2VEM

Project Manager: Don Gruber, Gilbane

Data Reviewer: Santiago Lee, ICF

Data Reviewer Title: Validator

Date of Review Report: June 25, 2014

Second Reviewer: Tom Beer, Gilbane

Completion Date of Second Reviewer: December 02, 2014

Samples Included in SDG Y9DS0

AUTOMATED DATA REVIEW SUMMARY for Y9DS0

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by KAP TECHNOLOGIES INC., THE WOODLANDS, TX and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Equipment Blank
- Field Duplicate RPD
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Field Blank
- Initial Calibration Verification
- Lab Replicate RPD
- Material Blank
- Negative Blank

AUTOMATED DATA REVIEW SUMMARY for Y9DS0

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 67 results (4.38%) out of the 1530 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

The EPA validator reviewed the KAP lab report, COCs, lab case narrative, and EXES data review package.

Qualifiers were added for calibration (C11) anomalies, but no sample receipt issues were noted.

Data qualifiers also were added for lab (B1, B5) and field (K1) blank detects, and minor poor surrogate recoveries (S).

No data were rejected, and all matrix QC outliers were resolved.

Reason and Comment Code Definitions

Comments

Code	Definition
C1	
C2	
C2S	
C3	
C4	
C5	
C6	
C7	
C8	
C9	

Reasons

Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
D5	Field Duplicate RPD
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomolies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for 14084A

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by U.S. EPA, Region 9 Lab, Richmond, CA and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Equipment Blank
- Field Duplicate RPD
- Lab Replicate RPD
- Prep Hold Time
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Field Blank
- Initial Calibration Verification
- LCS Recovery
- Material Blank
- MS Recovery
- MS RPD
- Negative Blank
- Surrogate
- Trip Blank

AUTOMATED DATA REVIEW SUMMARY for 14084A

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 0 results (0.00%) out of the 18 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Reviewer checked EPA R9 lab report and COC.

No data quality issues were noted. No data required qualification.

21-Apr-2015

Released by Tom Beer, Project Chemist

Reason and Comment Code Definitions

Comments

Code	Definition
C1	
C2	
C2S	
C3	
C4	
C5	
C6	
C7	
C8	
C9	

Reasons

Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
D5	Field Duplicate RPD
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomolies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by U.S. EPA, Region 9 Lab, Richmond, CA and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Equipment Blank
- Field Duplicate RPD
- Lab Replicate RPD
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Field Blank
- Initial Calibration Verification
- Material Blank
- Negative Blank
- Surrogate
- Trip Blank

AUTOMATED DATA REVIEW SUMMARY for 14084A_INO

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 0 results (0.00%) out of the 113 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Reviewer checked EPA R9 lab report and COC.

No data quality issues were noted. No data required qualification.

21-Apr-2015

Released by Tom Beer, Project Chemist

Reason and Comment Code Definitions

Comments

Code	Definition
C1	
C2	
C2S	
C3	
C4	
C5	
C6	
C7	
C8	
C9	

Reasons

Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
D5	Field Duplicate RPD
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomolies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for 14085A_INO

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by U.S. EPA, Region 9 Lab, Richmond, CA and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Equipment Blank
- Field Duplicate RPD
- Lab Replicate RPD
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Field Blank
- Initial Calibration Verification
- Material Blank
- Negative Blank
- Surrogate
- Trip Blank

AUTOMATED DATA REVIEW SUMMARY for 14085A_INO

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 0 results (0.00%) out of the 129 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Reviewer checked EPA R9 lab report and COC.

No data quality issues were noted. No data required qualification.

Sample SAIA-MW8-0314 for TOC analysis arrived broken and no sample remained, thus was not analyzed.

21-Apr-2015

Released by Tom Beer, Project Chemist

Comments

Code	Definition
C1	
C2	
C2S	
C3	
C4	
C5	
C6	
C7	
C8	
C9	

Reasons

Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
D5	Field Duplicate RPD
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomolies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for 14085A

Facility: Southern Avenue Industrial Area

TDS in Groundwater, March 2014

Guidance Document:

Contract Laboratory: U.S. EPA, Region 9 Lab, Richmond, CA

Field Contractor:

Data Review Contractor: Gilbane

SDG: 14085A, Certified - 4/22/2014 by wtse

QC Level: S1BVEM (Tier 1B)

Project Manager: Don Gruber

Data Reviewer: Tom Beer

Data Reviewer Title: Project Chemist

Date of Review Report: April 21, 2015

Second Reviewer:

Completion Date of Second Reviewer:

Samples Included in SDG 14085A

Analytical Method/ Leach Method	Normal Water Samples	Field QC Water Samples
A2540C/NONE	15	4

AUTOMATED DATA REVIEW SUMMARY for 14085A

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by U.S. EPA, Region 9 Lab, Richmond, CA and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Equipment Blank
- Field Duplicate RPD
- Lab Replicate RPD
- Prep Hold Time
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Field Blank
- Initial Calibration Verification
- LCS Recovery
- Material Blank
- MS Recovery
- MS RPD
- Negative Blank
- Surrogate
- Trip Blank

AUTOMATED DATA REVIEW SUMMARY for 14085A

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 0 results (0.00%) out of the 20 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Reviewer checked EPA R9 lab report and COC.

No data quality issues were noted. No data required qualification.

21-Apr-2015

Released by Tom Beer, Project Chemist

Reason and Comment Code Definitions

Comments

Code	Definition
C1	
C2	
C2S	
C3	
C4	
C5	
C6	
C7	
C8	
C9	

Reasons

Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
D5	Field Duplicate RPD
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomolies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for 14085A_PCATE

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by U.S. EPA, Region 9 Lab, Richmond, CA and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Equipment Blank
- Field Duplicate RPD
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Field Blank
- Initial Calibration Verification
- Lab Replicate RPD
- Material Blank
- Negative Blank
- Surrogate
- Trip Blank

AUTOMATED DATA REVIEW SUMMARY for 14085A_PCATE

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 0 results (0.00%) out of the 11 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Reviewer checked EPA R9 lab report and COC.

No data quality issues were noted. No data required qualification.

Reasons

Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
D5	Field Duplicate RPD
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomolies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for 14087A

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by U.S. EPA, Region 9 Lab, Richmond, CA and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

Blank
Blank - Negative
Field Duplicate RPD
Lab Replicate RPD
Prep Hold Time
Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

Ambient Blank
Calibration Blank
Calibration Blank - Negative
Continuing Calibration Verification
Equipment Blank
Field Blank
Initial Calibration Verification
LCS Recovery
Material Blank
MS Recovery
MS RPD
Negative Blank
Surrogate
Trip Blank

AUTOMATED DATA REVIEW SUMMARY for 14087A

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 0 results (0.00%) out of the 5 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Reviewer checked EPA R9 lab report and COC.

No data quality issues were noted. No data required qualification.

AUTOMATED DATA REVIEW SUMMARY for 14087A_INO

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by U.S. EPA, Region 9 Lab, Richmond, CA and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Field Duplicate RPD
- Lab Replicate RPD
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Equipment Blank
- Field Blank
- Initial Calibration Verification
- Material Blank
- Negative Blank
- Surrogate
- Trip Blank

AUTOMATED DATA REVIEW SUMMARY for 14087A_INO

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 0 results (0.00%) out of the 29 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Reviewer checked EPA R9 lab report and COC.

No data quality issues were noted. No data required qualification.

Comments

Code	Definition
C1	
C2	
C2S	
C3	
C4	
C5	
C6	
C7	
C8	
C9	

Reasons

Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
D5	Field Duplicate RPD
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomolies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for 14087A_PCATE

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by U.S. EPA, Region 9 Lab, Richmond, CA and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Field Duplicate RPD
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative

AUTOMATED DATA REVIEW SUMMARY for 14087A_PCATE

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 0 results (0.00%) out of the 4 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Reviewer checked EPA R9 lab report and COC.

No data quality issues were noted. No data required qualification.

H1	Test Hold Time
H2	Prep Hold Time
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomolies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for YA809

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by EUROFINS SPECTRUM ANALYTICAL, INC., NORTH KINGSTON, RI and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Ambient Blank
- Blank
- Blank - Negative
- Equipment Blank
- Lab Replicate RPD
- LCS Recovery
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Field Blank
- Field Duplicate
- Initial Calibration Verification
- Material Blank
- MS Recovery
- MS RPD
- Negative Blank

AUTOMATED DATA REVIEW SUMMARY for YA809

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 12 results (1.89%) out of the 634 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Reviewer checked CLP lab report case narrative, EXES summary QC report, COC as received, and Tier 3 validation report for SDG YA813

One cooler received at elevated temperature but no data qualifiers warranted. No calibration issues noted.

VOCs data qualified for field rinse blank detect (K1), and an ambient blank detect (K2). 1,4-dioxane data qualified for poor DMC recovery (S) and LCS anomalies (L).

Based on SDG YA813 Tier 3 report, all 1,4-dioxane results changed and data qualified for re-run out of hold time (H2). Re-run needed due to LCS spike added instead of DMC.

03-Mar-2017

Reasons

Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	The analyte was found in an associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
D5	Field duplicate precision
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
O	Interference check sample
P	Sample preservation/collection requirement not met.

AUTOMATED DATA REVIEW SUMMARY for MY9DP8

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by CHEMTECH CONSULTING GROUP, INC., ENGLEWOOD, NJ and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Equipment Blank
- Field Duplicate RPD
- Lab Replicate RPD
- LCS Recovery
- MS Recovery
- Prep Hold Time
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Field Blank
- Initial Calibration Verification
- Material Blank
- MS RPD
- Negative Blank
- Surrogate
- Trip Blank

AUTOMATED DATA REVIEW SUMMARY for MY9DP8

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 44 results (9.11%) out of the 483 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Gilbane reviewed Chemtech lab report, COCs, case narrative, and EXES data review package.

No sample receipt issues or calibration anomalies were noted.

Qualifiers were added for field (K1) and lab blank (B2) detects.

LCS and negative blank QC outliers were resolved.

17-Nov-2014

Released by Tom Beer, Project Chemist

Reason and Comment Code Definitions

Comments

Code	Definition
C1	
C2	
C2S	
C3	
C4	
C5	
C6	
C7	
C8	
C9	

Reasons

Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
D5	Field Duplicate RPD
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomolies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for Y9DP8

Facility: Southern Avenue Industrial Area

Groundwater Sampling Event, March 2014

Guidance Document:

Contract Laboratory: KAP TECHNOLOGIES INC., THE WOODLANDS, TX

Field Contractor:

Data Review Contractor: Gilbane

SDG: Y9DP8, Certified - 4/29/2014 by wtse

QC Level: S1BVEM

Project Manager: Don Gruber

Data Reviewer: Tom Beer

Data Reviewer Title: Project Chemist

Date of Review Report: November 18, 2014

Second Reviewer:

Completion Date of Second Reviewer:

Samples Included in SDG Y9DP8

AUTOMATED DATA REVIEW SUMMARY for Y9DP8

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by KAP TECHNOLOGIES INC., THE WOODLANDS, TX and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Field Duplicate RPD
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Equipment Blank
- Field Blank
- Initial Calibration Verification
- Lab Replicate RPD
- LCS Recovery
- Material Blank
- Negative Blank

AUTOMATED DATA REVIEW SUMMARY for Y9DP8

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 90 results (3.86%) out of the 2332 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Gilbane reviewed the KAP Tech lab report, COCs, case narrative, and EXES data review package.

One sample was analyzed out of hold time (H1), and calibration anomalies (C11, G1) were also qualified.

Qualifiers were also added for field (B5) and lab blank (B1) detects, and minor surrogate recoveries (S) and matrix (M) effects.

Most matrix, blank, and surrogate QC outliers were resolved.

18-Nov-2014

Released by Tom Beer, Project Chemist

Reason and Comment Code Definitions

Comments

Code	Definition
C1	
C2	
C2S	
C3	
C4	
C5	
C6	
C7	
C8	
C9	

Reasons

Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
D5	Field Duplicate RPD
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action

Reason and Comment Code Definitions

Reasons

Code	Definition
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomolies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for Y9DQ5

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by KAP TECHNOLOGIES INC., THE WOODLANDS, TX and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Equipment Blank
- Field Duplicate RPD
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Field Blank
- Initial Calibration Verification
- Lab Replicate RPD
- Material Blank
- Negative Blank

AUTOMATED DATA REVIEW SUMMARY for Y9DQ5

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 197 results (16.24%) out of the 1213 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Gilbane reviewed the KAP Tech lab report, COCs, case narrative, and EXES data review package.

One sample was analyzed out of hold time (H2), one sample cooler was received at an elevated temperature (T), and calibration anomalies (C11, G1) were also qualified.

Qualifiers were also added for lab blank (B1) detects, and minor surrogate recoveries (S) and matrix (M, D2) effects.

Most matrix, LCS, blank, and surrogate QC outliers were resolved.

18-Nov-2014

Released by Tom Beer, Project Chemist

Reason and Comment Code Definitions

Comments

Code	Definition
C1	
C2	
C2S	
C3	
C4	
C5	
C6	
C7	
C8	
C9	

Reasons

Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
D5	Field Duplicate RPD
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action

Reason and Comment Code Definitions

Reasons

Code	Definition
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomolies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for Y9DS0

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by KAP TECHNOLOGIES INC., THE WOODLANDS, TX and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Equipment Blank
- Field Duplicate RPD
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Field Blank
- Initial Calibration Verification
- Lab Replicate RPD
- Material Blank
- Negative Blank

AUTOMATED DATA REVIEW SUMMARY for Y9DS0

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 66 results (4.31%) out of the 1530 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Gilbane reviewed the KAP Tech lab report, COCs, case narrative, and EXES data review package.

Calibration anomalies (C11) were qualified, and no sample receipt issues were noted.

Qualifiers were also added for lab blank (B1, B5) and field blank (K1) detects, and surrogate recoveries (S).

Most matrix and blank QC outliers were resolved.

18-Nov-2014

Released by Tom Beer, Project Chemist

Reason and Comment Code Definitions

Comments

Code	Definition
C1	
C2	
C2S	
C3	
C4	
C5	
C6	
C7	
C8	
C9	

Reasons

Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
D5	Field Duplicate RPD
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomolies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for Y9XT5

Facility: Southern Avenue Industrial Area

Guidance Document:

Contract Laboratory: KAP TECHNOLOGIES INC., THE WOODLANDS, TX

Field Contractor:

Data Review Contractor: Gilbane

SDG: Y9XT5, Certified - 8/26/2015 by wtse

QC Level: S2BVEM (Tier 1B)

Project Manager: Don Gruber

Data Reviewer: Kristen Carlyon Peyton

Data Reviewer Title: Senior Chemist

Date of Review Report: September 09, 2015

Second Reviewer:

Completion Date of Second Reviewer:

Samples Included in SDG Y9XT5

Analytical Method/ Leach Method	Normal Water Samples	Field QC Water Samples
BNASIM/NONE	14	2
CVOL/NONE	15	5

AUTOMATED DATA REVIEW SUMMARY for Y9XT5

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by KAP TECHNOLOGIES INC., THE WOODLANDS, TX and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Field Duplicate RPD
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Equipment Blank
- Field Blank
- Initial Calibration Verification
- Lab Replicate RPD
- Material Blank
- Negative Blank

AUTOMATED DATA REVIEW SUMMARY for Y9XT5

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 5 results (0.47%) out of the 1056 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

EXES validation reviewed and qualifiers entered. See EXES data review reports for details.

Chain-of-custody and sample receipt documentation reviewed for sample receipt condition and custody issues. None found.

Field duplicate pairs reviewed. No RPD or RL check exceedances. See attached Field Duplicate Report.

Equipment blanks and trip blanks reviewed. See QC outliers and qualified results section below for details.

09-Sep-2015

Released by Kristen Carlyon Peyton, Senior Chemist

Reason and Comment Code Definitions

Comments

Code	Definition
C1	
C2	
C2S	
C3	
C4	
C5	
C6	
C7	
C8	
C9	

Reasons

Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
D5	Field Duplicate RPD
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomolies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for Y9XW3

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by KAP TECHNOLOGIES INC., THE WOODLANDS, TX and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Equipment Blank
- Field Duplicate RPD
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Field Blank
- Initial Calibration Verification
- Lab Replicate RPD
- Material Blank
- Negative Blank

AUTOMATED DATA REVIEW SUMMARY for Y9XW3

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 19 results (1.80%) out of the 1057 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

EXES validation reviewed and qualifiers entered. See EXES data review reports for details concerning MeCl2 storage blank issues and 1,2,3-trichlorobenzene/1,2,4-trichlorobenzene ICAL RSD issues.

Chain-of-custody and sample receipt documentation reviewed for sample receipt condition and custody issues. None found.

Field duplicate pairs reviewed. See attached Field Duplicate Report for details.

Field blanks (equipment blanks and trip blanks review). See QC outlier and qualified results sections below for details of detections and resulting qualifications.

11-Sep-2015

Reason and Comment Code Definitions

Comments

Code	Definition
C1	
C2	
C2S	
C3	
C4	
C5	
C6	
C7	
C8	
C9	

Reasons

Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
D5	Field Duplicate RPD
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomolies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

FD = Field Duplicate
RL = Reporting Limit
RPD = Relative Percent Difference

RL Check = If either the primary sample or field duplicate result is less than 1 times the RL then the criteria used to determine if the field duplicate is outside QC limits is +/- RL for Water and +/- 2 times RL for Soil

The RPD criteria used for organic analysis is: 35
The RPD criteria used for non-organic analysis is: 35

AUTOMATED DATA REVIEW SUMMARY for Y9XX9

Facility: Southern Avenue Industrial Area

Guidance Document:

Contract Laboratory: KAP TECHNOLOGIES INC., THE WOODLANDS, TX

Field Contractor:

Data Review Contractor: Gilbane

SDG: Y9XX9, Certified - 9/11/2015 by wtse

QC Level: S2BVEM (Tier 1B)

Project Manager: Peter Phillips

Data Reviewer: Kristen Carlyon Peyton

Data Reviewer Title: Senior Chemist

Date of Review Report: September 11, 2015

Second Reviewer:

Completion Date of Second Reviewer:

Samples Included in SDG Y9XX9

Analytical Method/ Leach Method	Normal Water Samples	Field QC Water Samples
BNASIM/NONE	8	1
CVOL/NONE	8	3

AUTOMATED DATA REVIEW SUMMARY for Y9XX9

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by KAP TECHNOLOGIES INC., THE WOODLANDS, TX and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Equipment Blank
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Field Blank
- Field Duplicate RPD
- Initial Calibration Verification
- Lab Replicate RPD
- Material Blank
- Negative Blank

AUTOMATED DATA REVIEW SUMMARY for Y9XX9

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 0 results (0.00%) out of the 581 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

EXES validation reviewed and qualifiers entered. See EXES data review reports for details.

Chain-of-custody and sample receipt documentation reviewed for sample receipt condition and custody issues. None found.

Field blanks (equipment blanks and trip blanks review). See QC outlier and qualified results sections below for details of detections and resulting qualifications.

11-Sep-2015

Released by Kristen Carlyon Peyton, Senior Chemist

Reason and Comment Code Definitions

Comments

Code	Definition
C1	
C2	
C2S	
C3	
C4	
C5	
C6	
C7	
C8	
C9	

Reasons

Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
D5	Field Duplicate RPD
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomolies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

CVOL/NONE	15	5

AUTOMATED DATA REVIEW SUMMARY for YA753

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by KAP TECHNOLOGIES INC., THE WOODLANDS, TX and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Field Duplicate
- LCS Recovery
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Equipment Blank
- Field Blank
- Initial Calibration Verification
- Lab Replicate RPD
- Material Blank
- MS Recovery
- MS RPD
- Negative Blank

AUTOMATED DATA REVIEW SUMMARY for YA753

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 6 results (0.57%) out of the 1057 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Reviewer checked KAP Lab case narrative, EXES data review report summary, and COC as received.

Sample YA7A0 logged incorrectly as YA780; corrected in eDMS. No calibration anomalies were noted.

Data qualifiers were added for surrogate recoveries (S) outside QC limits. All method blank (B1) issues were resolved.

No data were rejected.

Released by Tom Beer,

Reason and Comment Code Definitions

Comments

Code	Definition
C1	
C2	
C2S	
C3	
C4	
C5	
C6	
C7	
C8	
C9	

Reasons

Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	The analyte was found in an associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
D5	Field duplicate precision
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomolies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

CVOL/NONE	2	1

AUTOMATED DATA REVIEW SUMMARY for YA780

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by KAP TECHNOLOGIES INC., THE WOODLANDS, TX and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- LCS Recovery
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Equipment Blank
- Field Blank
- Field Duplicate
- Initial Calibration Verification
- Lab Replicate RPD
- Material Blank
- MS Recovery
- MS RPD
- Negative Blank

AUTOMATED DATA REVIEW SUMMARY for YA780

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 2 results (1.27%) out of the 158 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Reviewer checked KAP Lab case narrative, EXES data review report summary, and COC as received.

Sample "-RL12-" incorrect on COC; listed as "-RL04-"; corrected in eDMS. No calibration anomalies were noted.

Data qualifiers were added for a 1,2-DCE detect in a trip blank (K3). All method blank (B1) issues were resolved.

No data were rejected.

24-Aug-2016

Released by Tom Beer,

Reason and Comment Code Definitions

Comments

Code	Definition
C1	
C2	
C2S	
C3	
C4	
C5	
C6	
C7	
C8	
C9	

Reasons

Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	The analyte was found in an associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
D5	Field duplicate precision
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomolies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for YA790

Facility: Southern Avenue Industrial Area

Groundwater Monitoring Event, July 2016

Guidance Document:

Contract Laboratory: KAP TECHNOLOGIES INC., THE WOODLANDS, TX

Field Contractor:

Data Review Contractor: Gilbane

SDG: YA790, Certified - 8/16/2016 by wtse

QC Level: Tier 1B (S2BVEM)

Project Manager: Don Gruber

Data Reviewer: Tom Beer

Data Reviewer Title:

Date of Review Report: August 24, 2016

Second Reviewer:

Completion Date of Second Reviewer:

Samples Included in SDG YA790

Analytical Method/ Leach Method	Normal Water Samples	Field QC Water Samples
BNASIM/NONE	12	5
CVOL/NONE	12	8

AUTOMATED DATA REVIEW SUMMARY for YA790

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by KAP TECHNOLOGIES INC., THE WOODLANDS, TX and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Ambient Blank
- Blank
- Blank - Negative
- Equipment Blank
- Field Duplicate
- LCS Recovery
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Field Blank
- Initial Calibration Verification
- Lab Replicate RPD
- Material Blank
- MS Recovery
- MS RPD
- Negative Blank

AUTOMATED DATA REVIEW SUMMARY for YA790

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 9 results (0.85%) out of the 1057 results (sample and field QC samples) reported are qualified based on review and 6 results (0.57%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Reviewer checked KAP Lab case narrative, EXES data review report summary, and COC as received.

No sample receipt anomalies noted. Data were rejected (R) for a poor continuing calibration RRF (C10) for 1,2,4-TMB.

Data qualifiers were also added for field duplicate imprecision (D5) of 1,4-DXE, and minor surrogate (S) recovery issues. All method blank (B1) issues were resolved.

The 6 non-detect 1,2,4-TMB results were rejected (R) for poor RRFs in the continuing calibration verification QC (C10).

24-Aug-2016

Reason and Comment Code Definitions

Comments

Code	Definition
C1	
C2	
C2S	
C3	
C4	
C5	
C6	
C7	
C8	
C9	

Reasons

Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	The analyte was found in an associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
D5	Field duplicate precision
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomolies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

BNASIM/NONE	15	1
CVOL/NONE	15	5

AUTOMATED DATA REVIEW SUMMARY for YA792

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by KAP TECHNOLOGIES INC., THE WOODLANDS, TX and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Field Duplicate
- LCS Recovery
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Equipment Blank
- Field Blank
- Initial Calibration Verification
- Lab Replicate RPD
- Material Blank
- MS Recovery
- MS RPD
- Negative Blank

AUTOMATED DATA REVIEW SUMMARY for YA792

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 4 results (0.38%) out of the 1056 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Reviewer checked KAP Lab case narrative, EXES data review report summary, and COC as received.

No sample receipt anomalies noted. Data were estimated (J) for a continuing calibration recovery issue (C11) for 1,4-DCB.

Data qualifiers were also added for poor 1,4-DXE surrogate recovery (S). All method blank (B1) issues and potential field duplicate imprecision (D5) were resolved.

No data were rejected.

24-Aug-2016

Released by Tom Beer,

Reason and Comment Code Definitions

Comments

Code	Definition
C1	
C2	
C2S	
C3	
C4	
C5	
C6	
C7	
C8	
C9	

Reasons

Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	The analyte was found in an associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
D5	Field duplicate precision
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomolies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for Y9M67

Facility: Southern Avenue Industrial Area

Groundwater Monitoring Event, August 2014

Guidance Document:

Contract Laboratory: COMPUCHEM LABS, INC., CARY, NC

Field Contractor:

Data Review Contractor: Gilbane

SDG: Y9M67, Certified - 9/24/2014 by wtse

QC Level: Tier 3 (S3VEM)

Project Manager: Don Gruber

Data Reviewer: Tom Beer

Data Reviewer Title: Project Chemist

Date of Review Report: October 28, 2014

Second Reviewer:

Completion Date of Second Reviewer:

Samples Included in SDG Y9M67

WSM0011/NONE	14	2

AUTOMATED DATA REVIEW SUMMARY for Y9M67

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by COMPUCHEM LABS, INC., CARY, NC and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Field Duplicate RPD
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Equipment Blank
- Field Blank
- Initial Calibration Verification
- Lab Replicate RPD
- LCS Recovery
- Material Blank
- Negative Blank

AUTOMATED DATA REVIEW SUMMARY for Y9M67

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 63 results (6.62%) out of the 952 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Gilbane reviewed CompuChem lab report, COCs, case narrative, and EXES data review package.

No sample receipt anomalies were noted. Calibration issues are discussed below.

Data qualifiers were added for surrogate recoveries (S), minor blank contaminants (B1), and several calibration anomalies (C11).

28-Oct-2014

Released by Tom Beer, Project Chemist

Reason and Comment Code Definitions

Comments

Code	Definition
C1	
C2	
C2S	
C3	
C4	
C5	
C6	
C7	
C8	
C9	

Reasons

Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
D5	Field Duplicate RPD
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action
O	Interference check sample

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomolies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.

R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

Batch Report

Test Method: CVOL; Leach Method: NONE

Completion Date of Second Reviewer:	

Analytical Method/ Leach Method	Normal Gaseous Samples	Field QC Gaseous Samples
TO15/NONE	16	1

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by U.S. EPA, Region 9 Lab, Richmond, CA and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

Blank
Blank - Negative
Continuing Calibration Verification
Field Duplicate
Lab Replicate RPD
LCS Recovery
Prep Hold Time
Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

Ambient Blank
Calibration Blank
Calibration Blank - Negative
Equipment Blank
Field Blank
Initial Calibration Verification
Material Blank
MS Recovery
MS RPD
Negative Blank
Surrogate
Trip Blank

A representative sampling or ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 41 results (6.18%) out of the 663 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. Trace values are not counted as qualified results in the above count. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Reviewer checked COC as received, EPA R9 Level 2 Lab Report, Level 3 EDD spreadsheet and Gilbane eDMS ADR detail report.

Analytical Method	Comment
TO15	Calibration issues were identified from laboratory data qualifiers, supplemented by review of the Level 3 EDD results for initial calibration standards, and secondary and continuing calibration checks.

Reason Code Definitions

Code	Definition
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
D5	Field duplicate precision
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

Field Batch Report

--No Records Found--

MS Mismatch Report

--No Records Found--

Section to identify Matrix Spike mismatches where parent sample differs from MS by dilution.

QC Outlier Report

Test Method: TO15 Extraction Method: NONE Leach Method: NONE

QC Element	Sample ID/ Lab Sample ID	Run#/ Dil'n	Analyte	Result (Units)	Qualifier	Warning Limits	Control Limits	Reason	Comment	Rule	Action Level
Continuing Calibration Verification	S17D133-CAL1 (CV) / S17D133-CAL1	1 / 1.00	1,2,4-Trimethylbenzene	68.9 (percent)	J/UJ	70 - 130	50 - 140	C11			
Continuing Calibration Verification	S17D133-CAL1 (CV) / S17D133-CAL1	1 / 1.00	Benzyl chloride	69.1 (percent)	J/UJ	70 - 130	50 - 140	C11			
Continuing Calibration Verification	S17D133-CAL2 (CV) / S17D133-CAL2	1 / 1.00	Benzyl chloride	63.6 (percent)	J/UJ	70 - 130	50 - 140	C11			
Continuing Calibration Verification	S17D133-SCV1 (CV) / S17D133-SCV1	1 / 1.00	2-Hexanone	132 (percent)	J/None	70 - 130	50 - 140	C11			
Continuing Calibration Verification	S17D133-SCV1 (CV) / S17D133-SCV1	1 / 1.00	Benzyl chloride	151 (percent)	J/None	70 - 130	50 - 140	C11			
Continuing Calibration Verification	S17D133-SCV1 (CV) / S17D133-SCV1	1 / 1.00	Chloromethane	141 (percent)	J/None	70 - 130	50 - 140	C11			
Continuing Calibration Verification	S17D133-SCV1 (CV) / S17D133-SCV1	1 / 1.00	Isopropanol	137 (percent)	J/None	70 - 130	50 - 140	C11			
Continuing Calibration Verification	S17D133-SCV1 (CV) / S17D133-SCV1	1 / 1.00	Vinyl Acetate	137 (percent)	J/None	70 - 130	50 - 140	C11			

Rule is the multiplier used when blank contamination occurs to determine action level.

Review Questions

Method: TO15

Review Questions	Yes	No	NA	Comment
Stage 2 Review: COC - Custody Trail?	•			COCs signed by sampler and at the lab.
Stage 2 Review: COC - Temperature/Condition?	•			Samples received at ambient temp. in original boxes
Stage 2 Review: COC - Receipt anomalies?	•			No receipt anomalies.
Stage 2 Review: COC - Sample/Methods checked?	•			Standard TO-15 list requested.
Stage 2 Review: Case Narrative - Anomalies?	•			No anomalies noted in case narrative.
Stage 2 Review: Samples - Collection date?	•			All soil gas samples collected on 5/27/2017.
Stage 2 Review: Samples - Extraction date?			•	
Stage 2 Review: Samples - Analysis date?	•			Samples analyzed 4-28/29-2017, and re-analysis of high concentration analytes on 5-1/2-2017.
Stage 2 Review: Samples - Holding time?	•			Summa canister holding time of 30 days after certification met, and 30 days to analysis met.
Stage 2 Review: Samples - Batching?	•			All initial analyses batch B17D168. Re-analyses on 5/1/17 batch B17E020, on 5/2/17 batch B17E028.
Stage 2 Review: Samples - Surrogate recoveries?			•	
Stage 2 Review: Samples - Lab qualifiers?	•			Data were qualified J for trace detects (C1), and J/UJ for not meeting initial calibration criteria (C3).
Stage 2 Review: Calibration - ICAL?	•			No data qualification warranted.
Stage 2 Review: Calibration - ICV?	•			No data qualification warranted.
Stage 2 Review: Calibration - CCV?	•			Data were qualified J/UJ for initial and secondary calibration verification (C11) outside QC recovery limits of 70-130.
Stage 2 Review: Blank - Method blank?	•			All method blanks ND < QL
Stage 2 Review: Blank - Trip blank?			•	
Stage 2 Review: Blank - Equipment blank?			•	
Stage 2 Review: Precision/Accuracy - LCS/LCSD?	•			One LCS run per batch. All LCS recoveries within QC limits of 60 - 150.
Stage 2 Review: Quantitation - PQLs?	•			All QLs < 30 ug/m3 for normal run dilutions less than 3. Elevated QLs for re-analyses up to 900 ug/m3 at 16.08x dilution
Stage 2 Review: Quantitation - Dilution Factor?	•			All initial dilutions adjusted per canister pressure. Re-analyses performed for analytes exceeding calibration range at dilutions from 3.64 to 8.31. DLs and QLs adjusted accordingly.
Stage 2 Review: Quantitation - Results (i.e. correct analytes)?	•			TO-15 list analytes are correct.

Review Questions

Method: TO15

Review Questions	Yes	No	NA	Comment
Stage 2 Review: Field Duplicates - RPD within limits?	•			In field duplicate pair SAIA-SG45-15/SG45-16, RPDs for toluene (67) and isopropanol (67) exceed SAP RPD limit of 35. Data pairs were qualified J for field duplicate imprecision (D5).

AUTOMATED DATA REVIEW SUMMARY for 13107B

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by U.S. EPA, Region 9 Lab, Richmond, CA and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

Blank
Blank - Negative
Lab Replicate RPD
LCS Recovery
Prep Hold Time
Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

Ambient Blank
Calibration Blank
Calibration Blank - Negative
Continuing Calibration Verification
Equipment Blank
Field Blank
Field Duplicate RPD
Initial Calibration Verification
Material Blank
MS Recovery
MS RPD
Negative Blank
Surrogate
Trip Blank

AUTOMATED DATA REVIEW SUMMARY for 13107B

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 29 results (7.61%) out of the 381 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Reviewed R9 Lab Level 2 Analytical Report.

Checked for COC and calibration issues, select analytes were qualified for initial and continuing calibration exceedances.

Qualifiers were added due to field duplicate imprecision with the original field lab syringe samples.

14-Jun-2013

Reason and Comment Code Definitions

Comments

Code	Definition
C1	
C2	
C2S	
C3	
C4	
C5	
C6	
C7	
C8	
C9	

Reasons

Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available

Reason and Comment Code Definitions

Code	Definition
D5	Field Duplicate RPD
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action
O	Interference check sample
P	Sample preservation/collection requirement not met.

Reason and Comment Code Definitions

P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomolies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for E304021

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by H&P MOBILE GEOCHEMISTRY, CARLSBAD, CA and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- LCS Recovery
- Prep Hold Time
- Surrogate
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Equipment Blank
- Field Blank
- Field Duplicate RPD
- Initial Calibration Verification
- Lab Replicate RPD
- Material Blank
- MS Recovery
- MS RPD
- Negative Blank
- Trip Blank

AUTOMATED DATA REVIEW SUMMARY for E304021

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 8 results (2.50%) out of the 320 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Reviewed H&P Lab Level 3 Analytical Report.

Checked for COC and calibration issues, several detected results were qualified due to continuing calibration anomalies.

No other data qualifiers were required.

14-Jun-2013

Released by Tom Beer, Project Chemist

Reason and Comment Code Definitions

Comments

Code	Definition
C1	
C2	
C2S	
C3	
C4	
C5	
C6	
C7	
C8	
C9	

Reasons

Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available

Reason and Comment Code Definitions

Code	Definition
D5	Field Duplicate RPD
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action
O	Interference check sample
P	Sample preservation/collection requirement not met.

Reason and Comment Code Definitions

P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomolies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for E304025

Facility: Southern Avenue Industrial Area

Soil Gas Event, H&P Mobile Lab Remaining Samples, April 2013

Guidance Document:

Contract Laboratory: H&P MOBILE GEOCHEMISTRY, CARLSBAD, CA

Field Contractor:

Data Review Contractor: ITSI Gilbane

SDG: E304025, Certified - 5/2/2013 by wtse

QC Level: S1BVEM

Project Manager: Don Gruber

Data Reviewer: Tom Beer

Data Reviewer Title: Project Chemist

Date of Review Report: June 14, 2013

Second Reviewer:

Completion Date of Second Reviewer:

Samples Included in SDG E304025

Analytical Method/ Leach Method	Normal Gaseous Samples	Field QC Gaseous Samples
TO15/NONE	91	8

AUTOMATED DATA REVIEW SUMMARY for E304025

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by H&P MOBILE GEOCHEMISTRY, CARLSBAD, CA and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Field Duplicate RPD
- LCS Recovery
- Prep Hold Time
- Surrogate
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Equipment Blank
- Field Blank
- Initial Calibration Verification
- Lab Replicate RPD
- Material Blank
- MS Recovery
- MS RPD
- Negative Blank
- Trip Blank

AUTOMATED DATA REVIEW SUMMARY for E304025

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 7 results (0.18%) out of the 3960 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Reviewed H&P Lab Level 3 Analytical Report.

Checked for COC and calibration issues, none noted.

Qualifiers were added to a limited number of detected results due to field duplicate imprecision with the R9 Lab split Summa canister samples.

14-Jun-2013

Released by Tom Beer, Project Chemist

Reason and Comment Code Definitions

Comments

Code	Definition
C1	
C2	
C2S	
C3	
C4	
C5	
C6	
C7	
C8	
C9	

Reasons

Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available

Reason and Comment Code Definitions

Code	Definition
D5	Field Duplicate RPD
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action
O	Interference check sample
P	Sample preservation/collection requirement not met.

Reason and Comment Code Definitions

P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomolies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

Batch Report

Test Method: TO15; Leach Method: NONE

AUTOMATED DATA REVIEW SUMMARY for 14125A

Facility: Southern Avenue Industrial Area

EPA R9 Lab Split Soil Gas Results, April-May 2014

Guidance Document:

Contract Laboratory: U.S. EPA, Region 9 Lab, Richmond, CA

Field Contractor:

Data Review Contractor: Gilbane

SDG: 14125A, Certified - 6/3/2014 by wtse

QC Level: S1BVEM

Project Manager: Don Gruber

Data Reviewer: Peggy Cota

Data Reviewer Title: Senior Validator

Date of Review Report: August 07, 2014

Second Reviewer: Tom Beer

Completion Date of Second Reviewer: July 02, 2014

Samples Included in SDG 14125A

Analytical Method/ Leach Method	Normal Gaseous Samples	Field QC Gaseous Samples
TO15/NONE	12	0

AUTOMATED DATA REVIEW SUMMARY for 14125A

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by U.S. EPA, Region 9 Lab, Richmond, CA and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

Blank
Blank - Negative
Lab Replicate RPD
LCS Recovery
Prep Hold Time
Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

Ambient Blank
Calibration Blank
Calibration Blank - Negative
Continuing Calibration Verification
Equipment Blank
Field Blank
Field Duplicate RPD
Initial Calibration Verification
Material Blank
MS Recovery
MS RPD
Negative Blank
Surrogate
Trip Blank

AUTOMATED DATA REVIEW SUMMARY for 14125A

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 41 results (8.91%) out of the 460 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

EPA R9 Lab report was reviewed

Qualifiers were added for continuing calibration anomalies and tentatively identified compounds (TICs)

07-Aug-2014

Released by Peggy Cota, Senior Validator

02-Jul-2014

Released by Tom Beer

Reason and Comment Code Definitions

Comments

Code	Definition
C1	
C2	
C2S	
C3	
C4	
C5	
C6	
C7	
C8	
C9	

Reasons

Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
D5	Field Duplicate RPD
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action
O	Interference check sample

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomolies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.

R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for MY9E95

Facility: Southern Avenue Industrial Area

Soil Boring Sampling Event, April 2014

Guidance Document:

Contract Laboratory: CHEMTECH CONSULTING GROUP, INC., ENGLEWOOD, NJ

Field Contractor:

Data Review Contractor: ESAT/ICF International

SDG: MY9E95, Certified - 5/2/2014 by wtse

QC Level: S3VEM

Project Manager: Don Gruber, Gilbane

Data Reviewer: Dina Bailey, ICF

Data Reviewer Title: Validator

Date of Review Report: June 26, 2014

Second Reviewer: Tom Beer, Gilbane

Completion Date of Second Reviewer: December 01, 2014

Samples Included in SDG MY9E95

Analytical Method/ Leach Method	Normal Soil Samples	Field QC Soil Samples

AUTOMATED DATA REVIEW SUMMARY for MY9E95

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by CHEMTECH CONSULTING GROUP, INC., ENGLEWOOD, NJ and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Field Duplicate RPD
- Lab Replicate RPD
- LCS Recovery
- MS Recovery
- Prep Hold Time
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative

AUTOMATED DATA REVIEW SUMMARY for MY9E95

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 78 results (16.96%) out of the 460 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

The EPA validator reviewed the Chemtech lab report, COCs, lab case narrative, and EXES data review package.

No sample receipt issues or calibration anomalies were noted.

Data qualifiers were added for lab blank (B2) detects, matrix interference (M), and field duplicate (D5) imprecision.

No data were rejected, and the negative blank QC outliers were resolved.

Reason and Comment Code Definitions

Comments

Code	Definition
C1	
C2	
C2S	
C3	
C4	
C5	
C6	
C7	
C8	
C9	

Reasons

Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
D5	Field Duplicate RPD
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomolies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for Y9E95

Facility: Southern Avenue Industrial Area

Soil Boring Sampling Event, April 2014

Guidance Document:

Contract Laboratory: KAP TECHNOLOGIES INC., THE WOODLANDS, TX

Field Contractor:

Data Review Contractor: ESAT/ICF International

SDG: Y9E95, Certified - 5/14/2014 by wtse

QC Level: S3VEM

Project Manager: Don Gruber, Gilbane

Data Reviewer: Santiago Lee, ICF

Data Reviewer Title: Validator

Date of Review Report: June 25, 2014

Second Reviewer: Tom Beer, Gilbane

Completion Date of Second Reviewer: December 02, 2014

Samples Included in SDG Y9E95

Analytical Method/ Leach Method	Normal Soil Samples	Field QC Soil Samples

AUTOMATED DATA REVIEW SUMMARY for Y9E95

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by KAP TECHNOLOGIES INC., THE WOODLANDS, TX and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Field Duplicate RPD
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Equipment Blank
- Field Blank
- Initial Calibration Verification
- Lab Replicate RPD
- Material Blank
- Negative Blank
- Trip Blank

AUTOMATED DATA REVIEW SUMMARY for Y9E95

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 112 results (4.34%) out of the 2580 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

The EPA validator reviewed the KAP lab report, COCs, lab case narrative, and EXES data review package.

No sample receipt issues noted, but qualifiers were added for minor calibration (C11) anomalies.

Data qualifiers also were added for lab blank (B1, B2) detects, elevated PCB surrogate recoveries (S), matrix interference (M), poor LCS recoveries (L), and PCB second column (P1) and field duplicate (D5) imprecision.

No data were rejected, and some surrogate QC outliers were resolved.

Reason and Comment Code Definitions

Comments

Code	Definition
C1	
C2	
C2S	
C3	
C4	
C5	
C6	
C7	
C8	
C9	

Reasons

Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
D5	Field Duplicate RPD
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomolies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for MY9DP1

Facility: Southern Avenue Industrial Area

Groundwater Sampling Event, March 2014

Guidance Document:

Contract Laboratory: CHEMTECH CONSULTING GROUP, INC., ENGLEWOOD, NJ

Field Contractor:

Data Review Contractor: ESAT/ICF

SDG: MY9DP1, Certified - 5/30/2014 by wtse

QC Level: S3VEM

Project Manager: Don Gruber

Data Reviewer: Dina Bailey, ESAT

Data Reviewer Title: Validator

Date of Review Report: July 02, 2014

Second Reviewer: Tom Beer, Gilbane

Completion Date of Second Reviewer: November 17, 2014

Samples Included in SDG MY9DP1

Analytical Method/ Leach Method	Normal Water Samples	Field QC Water Samples

AUTOMATED DATA REVIEW SUMMARY for MY9DP1

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by CHEMTECH CONSULTING GROUP, INC., ENGLEWOOD, NJ and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Equipment Blank
- Field Duplicate RPD
- Lab Replicate RPD
- LCS Recovery
- MS Recovery
- Prep Hold Time
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Field Blank
- Initial Calibration Verification
- Material Blank
- MS RPD
- Negative Blank
- Surrogate
- Trip Blank

AUTOMATED DATA REVIEW SUMMARY for MY9DP1

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 82 results (19.11%) out of the 429 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

ESAT contractor reviewed Chemtech lab report, COCs, case narrative, and EXES data review package.

No sample receipt issues or calibration anomalies were noted.

Qualifiers were added for field (K1) and lab blank (B2, B5) detects, and minor serial dilution (A), and matrix (M) effects.

02-Jul-2014

Released by Dina Bailey, ESAT, Validator

17-Nov-2014

Released by Tom Beer, Gilbane

Reason and Comment Code Definitions

Comments

Code	Definition
C1	
C2	
C2S	
C3	
C4	
C5	
C6	
C7	
C8	
C9	

Reasons

Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
D5	Field Duplicate RPD
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomolies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for YA813

Facility: Southern Avenue Industrial Area

New Wells Groundwater Sampling, September 2016

Guidance Document:

Contract Laboratory: EUROFINS SPECTRUM ANALYTICAL, INC., NORTH KINGSTON, RI

Field Contractor:

Data Review Contractor: EPA-ESAT

SDG: YA813, Certified - 12/9/2016 by wtse

QC Level: Tier 3 (S4VEM)

Project Manager: Don Gruber - Gilbane

Data Reviewer: Lisa Booker - ESAT

Data Reviewer Title: Validator

Date of Review Report: November 30, 2016

Second Reviewer: Tom Beer - Gilbane

Completion Date of Second Reviewer: March 03, 2017

Samples Included in SDG YA813

Analytical Method/ Leach Method	Normal Water Samples	Field QC Water Samples

AUTOMATED DATA REVIEW SUMMARY for YA813

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by EUROFINS SPECTRUM ANALYTICAL, INC., NORTH KINGSTON, RI and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Field Duplicate
- Lab Replicate RPD
- LCS Recovery
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Equipment Blank
- Field Blank
- Initial Calibration Verification
- Material Blank
- MS Recovery
- MS RPD
- Negative Blank

AUTOMATED DATA REVIEW SUMMARY for YA813

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 4 results (1.52%) out of the 264 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

The ESAT contractor reviewed the CLP lab report and case narrative, EXES summary QC report, and COC as received.

No sample receipt or calibration issues noted.

No VOCs data qualifiers added. Estimated NDs (UJ) for all four 1,4-dioxane results qualified for their re-runs out of hold time (H2). Re-runs needed due to LCS spike added instead of DMC.

No data were rejected.

C2S	
C3	
C4	
C5	
C6	
C7	
C8	
C9	

Reasons

Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	The analyte was found in an associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
D5	Field duplicate precision
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomolies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for YA813

Facility: Southern Avenue Industrial Area

New Wells Groundwater, September 2016

Guidance Document:

Contract Laboratory: EUROFINS SPECTRUM ANALYTICAL, INC., NORTH KINGSTON, RI

Field Contractor:

Data Review Contractor: EPA-ESAT

SDG: YA813, Certified - 12/9/2016 by wtse

QC Level: Tier 3 (S3VEM)

Project Manager: Don Gruber - Gilbane

Data Reviewer: Lisa Booker - ESAT

Data Reviewer Title: Validator

Date of Review Report: November 30, 2016

Second Reviewer: Tom Beer - Gilbane

Completion Date of Second Reviewer: December 16, 2016

Samples Included in SDG YA813

Analytical Method/ Leach Method	Normal Water Samples	Field QC Water Samples

AUTOMATED DATA REVIEW SUMMARY for YA813

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by EUROFINS SPECTRUM ANALYTICAL, INC., NORTH KINGSTON, RI and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Field Duplicate
- Lab Replicate RPD
- LCS Recovery
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Equipment Blank
- Field Blank
- Initial Calibration Verification
- Material Blank
- MS Recovery
- MS RPD
- Negative Blank

AUTOMATED DATA REVIEW SUMMARY for YA813

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 4 results (1.52%) out of the 264 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

The ESAT contractor reviewed the CLP Lab report, COCs as received by the lab, EXES report output, QA/QC forms, per EPA CLP SOW SOM02.3

No sample receipt issues noted.

Qualifiers were added to all four 1,4-dioxane non-detect results (UJ) because the extract was re-run out of holding time (H2).

No other qualifiers were addeed, and no data were rejected.

Released by Lisa Booker - ESAT, Validator	30-Nov-2016
Released by Tom Beer - Gilbane	16-Dec-2016

C3	
C4	
C5	
C6	
C7	
C8	
C9	

Reasons

Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	The analyte was found in an associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
D5	Field duplicate precision
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomolies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for Y9M81

Facility: Southern Avenue Industrial Area

Groundwater Monitoring Event, August 2014

Guidance Document:

Contract Laboratory: COMPUCHEM LABS, INC., CARY, NC

Field Contractor:

Data Review Contractor: ESAT/ICF International

SDG: Y9M81, Certified - 9/23/2014 by wtse

QC Level: Tier 3 (S3VEM)

Project Manager: Don Gruber

Data Reviewer: Anna Pajarillo (ESAT)

Data Reviewer Title: Validator

Date of Review Report: October 28, 2014

Second Reviewer: Tom Beer, Gilbane

Completion Date of Second Reviewer: October 31, 2014

Samples Included in SDG Y9M81

Analytical Method/ Leach Method	Normal Water Samples	Field QC Water Samples

AUTOMATED DATA REVIEW SUMMARY for Y9M81

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by COMPUCHEM LABS, INC., CARY, NC and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Equipment Blank
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Field Blank
- Field Duplicate RPD
- Initial Calibration Verification
- Lab Replicate RPD
- LCS Recovery
- Material Blank
- Negative Blank

AUTOMATED DATA REVIEW SUMMARY for Y9M81

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 13 results (3.07%) out of the 423 results (sample and field QC samples) reported are qualified based on review and 3 results (0.71%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

ESAT contractor reviewed CompuChem lab report, COCs, case narrative, and EXES data review package.

No sample receipt anomalies were noted. Calibration issues are discussed below.

Data qualifiers were added for high surrogate recoveries (S+), minor blank contaminants (K1, B1, B5), and several calibration anomalies (C11).

Three results for bromomethane were rejected (R) for low RRFs in CCVs (C10).

Reason and Comment Code Definitions

Comments

Code	Definition
C1	
C2	
C2S	
C3	
C4	
C5	
C6	
C7	
C8	
C9	

Reasons

Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
D5	Field Duplicate RPD
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action
O	Interference check sample

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomolies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.

R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for Y9XT5

Facility: Southern Avenue Industrial Area

CPT Groundwater Sampling, July 2015

Guidance Document:

Contract Laboratory: KAP TECHNOLOGIES INC., THE WOODLANDS, TX

Field Contractor:

Data Review Contractor: ESAT/ICF International

SDG: Y9XT5, Certified - 8/26/2015 by wtse

QC Level: S3VEM

Project Manager: Don Gruber

Data Reviewer: Estrellita Manuel

Data Reviewer Title: Validator

Date of Review Report: September 30, 2015

Second Reviewer: Tom Beer - Gilbane

Completion Date of Second Reviewer: March 07, 2016

Samples Included in SDG Y9XT5

Analytical Method/ Leach Method	Normal Water Samples	Field QC Water Samples
BNASIM/NONE	14	2
CVOL/NONE	15	5

AUTOMATED DATA REVIEW SUMMARY for Y9XT5

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by KAP TECHNOLOGIES INC., THE WOODLANDS, TX and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Field Duplicate RPD
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Equipment Blank
- Field Blank
- Initial Calibration Verification
- Lab Replicate RPD
- Material Blank
- Negative Blank

AUTOMATED DATA REVIEW SUMMARY for Y9XT5

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 7 results (0.66%) out of the 1056 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

ESAT validator checked the CLP lab case narrative, the EXES review report, and laboratory data report, including COCs as received.

No sample receipt anomalies requred data qualification. Qualifiers were added to some isopropylbenzene data for CCV anomalies.

Data qualifiers were also added for minor acetone and methylene chloride detects in method (B1) and trip (K3) blanks.

The TCE result in sample SAIA-CPT19-60 was changed from ND to 1.2 ug/L, for false negative identification. No data were rejected.

Reason and Comment Code Definitions

Comments

Code	Definition
C1	
C2	
C2S	
C3	
C4	
C5	
C6	
C7	
C8	
C9	

Reasons

Code	Definition
A	Serial dilution
A1	Ambient Blank
B1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
D5	Field Duplicate RPD
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomolies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

AUTOMATED DATA REVIEW SUMMARY for 16029B

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by ; analyses were performed by U.S. EPA, Region 9 Lab, Richmond, CA and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Ambient Blank
- Blank
- Blank - Negative
- Field Duplicate
- LCS Recovery
- Prep Hold Time
- Surrogate
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Equipment Blank
- Field Blank
- Initial Calibration Verification
- Lab Replicate RPD
- Material Blank
- MS Recovery
- MS RPD
- Negative Blank
- Trip Blank

AUTOMATED DATA REVIEW SUMMARY for 16029B

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 130 results (47.79%) out of the 272 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Validated uptake rates were not available for VOCs 1,1,2-trichloroethane, 1,1-dichloroethane, 1,1-dichloroethene, 1,3,5-trimethylbenzene, cis-1,2-dichloroethylene, and trans-1,2-dichloroethylene. The rates were estimated using the chemical's diffusion coefficient in air and the geometric constant of the sampler. The associated results in all samples have been qualified as “J” or “UJ” for an estimated value or reporting limit and assigned the reason code ("X2").

The reporting limit laboratory control standards (LCS) for benzene recovered greater than the upper control limit of 140% at 176%. The associated sample results were all reported at levels greater than the reporting limit except for the ambient blank, sample 5407-OA01-0116, which was reported as non-detect. The result for benzene in the ambient blank has been qualified as “UJ-” for an estimated reporting limit with a low bias for reporting limit LCS (reason code “L”). No qualifiers are required for the positive results in the other samples.

The method detection limit (MDL) for naphthalene did not meet the Regional Screening Level (RSL) for Residential Indoor Air of 0.083 ug/m3 at 0.21 ug/m3; and the MDL for 1,1,2-trichloroethane did not meet the RSL for Residential Indoor Air of 0.021 ug/m3 at 0.07 ug/m3. The MDLs for both compounds did meet the RSLs for Industrial Indoor Air of 0.36 ug/m3 and 0.088 ug/m3, respectively, and the Reporting Limits for 7 Day Exposure listed in the QAPP of 0.3968 ug/m3 and 0.1503 ug/m3, respectively.

Due to system limitations, the trace results for three of the compounds, which were positive results slightly above the method detection limit, were reported as non-detect at the reporting limit in the database. The affected results are 1,1,1-trichloroethane in sample 5227-OA02-0116 (1601047-14), trichloroethene in sample 5230-IA02-0116 (1601047-12) and 1,2,4-trimethylbenzene in sample 5407-OA01-0116 (1601047-16). The correct results have been updated in the database.

Reason and Comment Code Definitions

Comments	
Code	**Definition**
C1	
C2	
C2S	
C3	
C4	
C5	
C6	
C7	
C8	
C9	

Reasons	
Code	**Definition**
A	Serial dilution
A1	Ambient Blank
B1	The analyte was found in an associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
D5	Field duplicate precision
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action

AUTOMATED DATA REVIEW SUMMARY for 16029B

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomolies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

Matrix / Sample Type

Matrix	Matrix Description	Sample Code	Sample Code Description
AA	AMBIENT AIR	FD	Field Duplicate
AA	AMBIENT AIR	N	Normal Environmental Sample
AI	INDOOR AIR	FD	Field Duplicate
AI	INDOOR AIR	N	Normal Environmental Sample

Data Qualifier Definitions

Flag	Description
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

Reason and Comment Code Definitions

Code	Description
L	Percent recovery of laboratory control sample recovery was outside established limits
S	Surrogate recovery out of criteria (upper or lower limit)
TR	Trace Level Detect
X2	Qualified due to professional judgment, see data validation narrative.

AUTOMATED DATA REVIEW SUMMARY for 1504309R2

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the SAP to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by Gilbane ; analyses were performed by Air Toxics, Ltd., Folsom, CA and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- Field Duplicate RPD
- LCS Recovery
- Prep Hold Time
- Surrogate
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Equipment Blank
- Field Blank
- Initial Calibration Verification
- Lab Replicate RPD
- Material Blank
- MS Recovery
- MS RPD
- Negative Blank
- Trip Blank

AUTOMATED DATA REVIEW SUMMARY for 1504309R2

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 63 results (38.89%) out of the 162 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Validated uptake rates were not available for VOCs 1,1,2-trichloroethane, 1,1-dichloroethane, 1,1-dichloroethene, 1,3,5-trimethylbenzene, cis-1,2-dichloroethylene, trans-1,2-dichloroethylene and vinyl chloride. The rates were estimated using the chemical's diffusion coefficient in air and the geometric constant of the sampler. The associated results in all samples have been qualified as “J” or “UJ” for an estimated value or reporting limit. See QC Manual Outlier Report in this ADR.

For Radiello samples collected over a seven-day period, the average temperature at the collection site should be documented and used to calculate the final VOC concentrations. For the samples associated with this SDG only the initial temperature of 89.8˚F was documented. While collection temperatures have an effect on the final concentration, it was determined that the results would not significantly change if the average temperature was used to calculate the concentrations. No qualifiers were applied to the results.

The method detection limit (MDL) for naphthalene did not meet the "Regional Screening Level for Residential Indoor Air” of 0.083 ug/m3 at 0.17 ug/m3 from Table 3 of the QAPP. The MDL did meet the “Reporting Limit of 7 Day Exposure (ug/m3)" of 0.3968 ug/m3 from Table 3 of the QAPP.

C4	
C5	
C6	
C7	
C8	
C9	

Reasons	
Code	**Definition**
A	Serial dilution
A1	Ambient Blank
B1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available

AUTOMATED DATA REVIEW SUMMARY for 1504309R2

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
D5	Field Duplicate RPD
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomolies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

Matrix / Sample Type

Matrix	Matrix Description	Sample Code	Sample Code Description
AI	INDOOR AIR	FD	Field Duplicate
AI	INDOOR AIR	N	Normal Environmental Sample

Data Qualifier Definitions

Flag	Description
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

Reason and Comment Code Definitions

Code	Description
TR	Trace Level Detect
X2	Qualified due to professional judgment (unvalidated uptake rate). See Narrative Comments in ADR.

AUTOMATED DATA REVIEW SUMMARY for 1504459R1

Facility: Southern Avenue Industrial Area

Guidance Document: **Sampling and Analysis Plan (SAP), Vapor Intrusion Evaluation, Southern Avenue Industrial Area Superfund Site, South Gate, LA County CA 2015**

Contract Laboratory: Air Toxics, Ltd., Folsom, CA

Field Contractor:

Data Review Contractor:

SDG: 1504459R1, Certified - 7/16/2015 by kvagadori

QC Level: Tier 3

Project Manager: Don Gruber

Data Reviewer: Peggy Cota

Data Reviewer Title: Project Chemist

Date of Review Report: July 22, 2015

Second Reviewer: Tom Beer

Completion Date of Second Reviewer:

Samples Included in SDG 1504459R1

Analytical Method/ Leach Method	Normal Air Samples	Field QC Air Samples
TO17/NONE	5	0

AUTOMATED DATA REVIEW SUMMARY for 1504459R1

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the SAP to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by Gilbane; analyses were performed by Air Toxics, Ltd., Folsom, CA and were reported under sample delivery group (SDG) . Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

- Blank
- Blank - Negative
- LCS Recovery
- Prep Hold Time
- Surrogate
- Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

- Ambient Blank
- Calibration Blank
- Calibration Blank - Negative
- Continuing Calibration Verification
- Equipment Blank
- Field Blank
- Field Duplicate RPD
- Initial Calibration Verification
- Lab Replicate RPD
- Material Blank
- MS Recovery
- MS RPD
- Negative Blank
- Trip Blank

AUTOMATED DATA REVIEW SUMMARY for 1504459R1

A minimum of ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 40 results (44.44%) out of the 90 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Validated uptake rates were not available for VOCs 1,1,2-trichloroethane, 1,1-dichloroethane, 1,1-dichloroethene, 1,3,5-trimethylbenzene, cis-1,2-dichloroethylene, trans-1,2-dichloroethylene and vinyl chloride. The rates were estimated using the chemical's diffusion coefficient in air and the geometric constant of the sampler. The associated results in all samples have been qualified as “J” or “UJ” for an estimated value or reporting limit. See QC Manual Outlier Report in this ADR.

For Radiello samples collected over a seven-day period, the average temperature at the collection site should be documented and used to calculate the final VOC concentrations. For the samples associated with this SDG no temperatures were documented and the default temperature of 77˚F was used in the calculations. While collection temperatures have an effect on the final concentration, it was determined that the results would not significantly change if the average temperature was used to calculate the concentrations. No qualifiers were applied to the results.

The samples were received at the laboratory at a temperature of 8.2˚C.which is greater than the QAPP criteria of less than 6˚C. Since blue ice was present in the cooler and the Radiello Manual (Sigma-Aldrich, 2006 page D4) indicates that exposed VOC cartridges kept in a cool place maintain their contents unaltered for at least 6 months, no qualifiers were applied.

See next page for additional comment.

Released by Peggy Cota, Project Chemist

AUTOMATED DATA REVIEW SUMMARY for 1504459R1

Released by Tom Beer

4-August, 2015

Addition to Narrative Comments

The method detection limit (MDL) for naphthalene did not meet the "Regional Screening Level for Residential Indoor Air" of 0.083 ug/m3 at 0.17 ug/m3 from Table 3 of the QAPP. The MDL did meet the "Reporting Limit of 7 Day Exposure (ug/m3)" of 0.3968 ug/m3 from Table 3 of the QAPP.

C3	
C4	
C5	
C6	
C7	
C8	
C9	

Reasons	
Code	**Definition**
A	Serial dilution
A1	Ambient Blank
B1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank.
B2	Calibration Blank
B3	Calibration Blank - Negative
B4	Negative Blank
B5	The analyte was found in an associated blank as well as in the sample.
C10	Continuing Calibration Verification RRF
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
C12	Low Level Continuing Calibration Verification was outside control limits
D1	Lab Replicate RPD
D2	MS RPD exceeded established criteria.
D4	No precision available

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
D5	Field Duplicate RPD
D6	RPD of laboratory control sample exceeded criteria
D7	Field Duplicate not usable
E	Exceeds LinearCalibration Range
F	Hydrocarbon pattern does not match standard
G	Initial Calibration RRF
G1	Initial Calibration RSD
G2	Initial Calibration Verification percent recovery, percent difference, or percent drift
G3	r2 values < 0.990 in the ICAL
G4	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
G5	Initial Calibration out for metals/inorganics
H1	Test Hold Time
H2	Prep Hold Time
I	Internal standard
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
K1	Detected in the associated equipment rinsate blank.
K2	Detected in the associated field (i.e., ambient) blank.
K3	Detected in the associated trip blank.
K4	Detected in the associated storage blank
K5	Detected in the associated source blank
L	Percent recovery of laboratory control sample recovery was outside established limits
L1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank. (Negative)
M	Matrix spike recovery was outside established criteria.
M1	Minimum matrix spike frequency was not attained
N	Blank - No Action

Reason and Comment Code Definitions

Reasons	
Code	**Definition**
O	Interference check sample
P	Sample preservation/collection requirement not met.
P1	Column or detector RPD
P2	Improper preparation/extraction
Q1	Material Blank
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
T	Receipt Temperature
T2	RSD of lab triplicate out
TI	Tentatively Identified Compound
TR	Trace Level Detect
V	Sample Receipt Condition
W	Column breakdown (pesticides)
X	Raised reporting limit
X1	Unresolved Isomers; no peak separation
X2	Qualified due to professional judgment, see data validation narrative.
Y	Analyte not confirmed on second column
Y1	False Positive
Y2	Sum of species greater than total result
Z	Data rejected due to radiological anomolies
Z1	Data rejected, more valid data available

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

Matrix / Sample Type

Matrix	Matrix Description	Sample Code	Sample Code Description
AI	INDOOR AIR	N	Normal Environmental Sample

Data Qualifier Definitions

Flag	Description
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

Reason and Comment Code Definitions

Code	Description
B1	A common laboratory artifact was detected in the sample at a concentration less than 10X the concentration detected in the associated method blank.
L	Percent recovery of laboratory control sample recovery was outside established limits
T2	RSD of lab triplicate out
X2	Qualified due to professional judgment (unvalidated uptake rate). See Narrative Comments in ADR.

Gilbane Company Data Validation Report
Laboratory SDG GIL042114-A1
Soil Gas Sampling at Southern Avenue Industrial Area Superfund Site
South Gate Los Angeles County, California
Collected April/May 2014

1.0 DESCRIPTION OF DATA VALIDATION

The analytical data presented in the laboratory Sample Delivery Groups (SDG) GIL042114-A1, reported on May 20, 2014, were reviewed by Gilbane Company (Gilbane) project chemist as a Tier 1B or Tier 3 data validation. The SDGs contained data for volatile organic compounds (VOCs) by EPA Method TO-15 for soil gas samples collected with syringes. The analytical laboratory was H&P Mobile Geochemistry, Inc. (H&P) of Carlsbad, California. Table 1 below provides cross reference of the samples analyzed.

Table 1

The data underwent an EPA Tier 1B data validation for which the laboratory provided a Level II data deliverable. Level II data deliverable contains the sample results and chain-of-custody forms along with basic quality control (QC) summaries including surrogate recoveries, method blank results, and precision and accuracy data summaries for each analytical or preparation batch. The report also includes a case narrative describing any analytical problems and the potential impact on data quality. The samples collected on April 23, 2014 underwent a Tier 3 data validation for which the laboratory provided a Level IV data deliverable. Tier 3 data validation included all the items from the Tier 1B verification plus review of the data for the instrument calibrations, sample quantitation, compound identification and internal standard recoveries.

The following data and (QC) summaries were reviewed as indicated for each validation level against criteria listed in the *Sampling and Analysis Plan (SAP), Remedial Investigation/Feasibility Study, Southern Avenue Industrial Area Superfund Site, South Gate, Los Angeles County, California* (ITSI Gilbane October 2012) and EPA Method TO-15.

Tier 1B and 3

- Chain of Custody (COC);
- Case Narrative;
- Technical holding time;

- Method blanks;
- Laboratory control sample (LCS);
- Field duplicates;
- Surrogates;
- Internal standards;
- Leak check compound.
- Initial calibration summaries;
- Initial calibration verification (ICV);
- Continuing calibration verification (CCV);

Tier 3

- Instrument tunes;
- Quantitation Reports;
- Chromatograms;
- Compound spectra;
- Calculation verifications.

2.0 LABORATORY REPORT

The laboratory case narrative was reviewed for any QC anomalies and the sample results were reviewed for any qualifiers applied by the laboratory. Anomalies that required data qualification are discussed in the sections below. A summary of the qualified data is provided in the Qualified Results Table as Appendix A of this report.

3.0 SAMPLE INTEGRITY

The Chains-of-Custody (COC) for the April/May 2014 soil gas sampling event were available for review. The results of the leak check, which was performed on each sample syringe, were reviewed. There were no anomalies that required qualification of the data, however, the following observations were made.

- SDG E404074: The time the samples were released to the laboratory was not documented on the COC. Since the time is documented for each sample on the COC, no action is required.

- Corrections to several of the COCs were made by writing over or obliterating the original data. Sample corrections should be done with a single line strike out and the initials of the sampler. No data qualifiers are required.

- The laboratory determined that due to a miscalculation in the pump run times, the purge volumes were incorrectly calculated. The shallower probes (5 and 15 feet) were being purged at two purge volumes instead of three volumes. Since the laboratory indicated that the purge volume tests showed minor variation in the concentrations between the one purge volume and the three purge volume, it was concluded that the two purge volume was acceptable. The sample log sheets were amended to reflect the proper purge volumes used. A copy of the laboratory communication is provided in Appendix C. The amended log sheets are attached to the laboratory report.

4.0 HOLDING TIME

The samples were prepared for analysis within the recommended preparation holding time of 30 minutes after collection.

5.0 INSTRUMENT TUNE

The daily instrument tunes were reviewed against method criteria. The tune results were within criteria.

6.0 INITIAL AND CONTINUING CALIBRATION

The initial calibration, ICV and CCV summaries were reviewed for all samples. The raw data was reviewed and calculation verifications were performed on a portion of the initial calibration, ICV and CCV results for the Tier 3 validation. There were no calibration anomalies that required qualification of the data except as noted below.

- SDG E404066, E0404070, E404095 : The CCV percent differences for naphthalene associated with the samples from SDGs E404066, E404070 and E404095 were out of the criteria of less than 30 percent at 49.3, 48.9 and 48.6 percent, respectively. The associated sample results have been qualified as "UJ-" for an estimated reporting limit with a low bias.

- SDG E404074: The CCV percent differences for naphthalene and 1,2,4-trichlorobenzene associated with the samples from SDG E404074 were out of the criteria of less than 30 percent at 54.9 and 35.4 percent, respectively. The associated sample results have been qualified as "UJ-" or "J-" for an estimated reporting limit or value with a low bias.

- SDG E404080: The CCV percent differences for naphthalene and 1,2,4-trichlorobenzene associated with the samples from SDG E404080 were out of the criteria of less than 30 percent at 56.8 and 34.4 percent, respectively. The associated sample results have been qualified as "UJ-" for an estimated reporting limit with a low bias.

- SDG E404090: The CCV percent differences for naphthalene, cis-1,2-dichloroethene, tetrachloroethene and toluene associated with the samples from SDG E404090 were out of the criteria of less than 30 percent at 34.5, 38.8, 55.6 and 39.1 percent, respectively. The associated sample result for naphthalene has been qualified as "UJ-" for an estimated reporting limit with a low bias. The associated positive results for cis-1,2-dichloroethene, tetrachloroethene and toluene have been qualified as "J+" for an estimated value with a high bias. No qualifiers are required for the non-detect results for cis-1,2-dichloroethene, tetrachloroethene and toluene.

- SDG404099: The CCV percent differences for naphthalene and 1,2,4-trichlorobenzene associated with the samples from SDG 404099 were out of the criteria of less than 30 percent at 54.7 and 31.3 percent, respectively. The associated sample results have been qualified as "UJ-" for an estimated reporting limit with a low bias.

7.0 BLANK EVALUATION

A method blank was reported for each analysis to assess laboratory contamination. There were no compounds detected in the method blank.

8.0 LCS

A single LCS was reported for each analysis. QC results were reviewed using the SAP control limit of 60 to 150 percent for accuracy. There were no anomalies except as noted below.

- SDG E404099: The percent recovery for cis-1,2-dichloroethene in the LCS associated with the samples from SDG E404099 was out of the criteria of 60 to 150 percent at159 percent. The associated positive results have been qualified as "J+" for an estimated value with a high bias. No qualifiers are required for the non-detect results.

9.0 MATRIX SPIKE (MS) AND MATRIX SPIKE DUPLICATE (MSD)

A project MS/MSD pair was not collected. Instead, the LCS was used to measure accuracy and the field duplicate was used to measure precision. The LCS and field duplicate are discussed in Sections 8.0 and 12.0, respectively.

10.0 SURROGATES AND INTERNAL STANDARDS

Surrogate spike were reviewed against the laboratory established control limits and internal standard recoveries were reviewed against the method criteria. All surrogate and internal standard recoveries were within control limits except as noted below.

- SDG E405001: The recoveries for the internal standards 1,4-difluorobenzene and chlorobenzene-d5 were out of the criteria of 60 to 140% at 206% and 210% in sample SAIA-SB/SG-40-35 Rep, P628cc (E405001-06). The associated result for trichloroethene has been qualified as "J+" for an estimated value with a high bias. No qualifiers are required for the non-detect results associated with the above internal standards.

11.0 COMPOUND QUANTITATION AND IDENTIFICATION

The laboratory reporting limits and quantitative results were reviewed. The laboratory reporting limits for a one times analysis were reviewed against the California State Office of *Environmental Health Hazard Assessment (OEHHA), September 2010, Table 3 – Soil Gas Screening Numbers for Volatile Chemicals Below Buildings Constructed Without Engineered Fill Below Sub-Slab Gravel*. All applicable compounds met the California residential and industrial limits. The results for 1,4-dioxane were reviewed against EPA Regional Screening Levels (RSLs) for indoor air used as a basis (EPA, May 2014). The laboratory reporting limit for 1,4-dioxane was slightly greater than the residential, non-carcinogen RSL of 31 micrograms per cubic meter (ug/m^3) at 36 ug/m^3. The laboratory did meet the non-carcinogen, industrial RSL of 130 ug/m^3 for 1,4-dioxane.

Review of the sample quantitation reports, chromatograms and ion spectra from the sample analyses were reviewed. In addition, a portion of the reported field and QC sample results were verified by manually calculating the results from the raw data. There were no quantitation anomalies that required qualification of the data, except as noted below.

- SDG E404074: The instrument raw results (before the dilution factor applied) for 1,1-dichloroethene, trans-1,2-dichloroethene, 1,1-dichloroethane and vinyl chloride associated with sample SAIA-SB/SG-24-35, P578cc (E404074-08) were greater than the highest standard of the multi-level calibration curve. The results have been qualified as "J" for an estimated value.

- SDG E404070: The non-detect result for trans-1,2-dichloroethene was elevated in sample SAIA-SB/SG-38-35, P578cc (E404070-09) due to high levels of target analytes. No qualifiers are required, however, the end users of the data should be aware that the elevated limit may mask low levels of the compound in the sample.

- SDG E404074: Isopropylbenzene was reported in sample SAIA-SB/SG-24-35, P578cc **(**E404074-08) at 28 ug/cm^3, however, it was not included on the quantitation report in the raw data. The laboratory was contacted and indicated that the compound was not present in the sample and should not have been reported. The laboratory issued an amended report with the result for isopropylbenzene reported as non-detect at the reporting limit. Communication with the laboratory is provided in Attachment C.

12.0 FIELD DUPLICATE AND SPLIT SAMPLES

Field duplicate sets were collected and analyzed to measure field and laboratory precision. The method replicate requirement of one per day was met except for SDG E404066. No qualifiers were applied due to absence of field duplicate collection and analysis. The results for the field duplicate and parent sample were in agreement for all field duplicate pairs. The results of the field duplicate pairs are summarized in Appendix A of this DVR. Quality Assurance (QA) samples or split samples were also collected for selected samples. The samples were sent to USEPA Region 9 Laboratory of Richmond, California for analysis. The comparison of the split sample results to the primary sample results are discussed in the data validation report for EPA Region 9 SDG 14125A.

13.0 RECOMMENDATIONS

Gilbane recommends that the laboratory not edit the quantitation reports to ensure that the instrument data matches the reported results. This reduces review errors and provides complete documentation of the quantitative results and complies with Good Automated Laboratory Practices.

14.0 OVERALL ASSESSMENT FOR SAIA SOIL GAS SAMPLING FOR APRIL AND MAY 2014

There were no rejected results for this sampling event. Based on the available information, the data as qualified are considered useable for their intended purposes.

Appendix A – Qualified Results Table
Appendix B – Field Duplicate Table
Appendix C – Communication with Laboratory

MEMORANDUM

TO: Karen Jurist, Remedial Project Manager
Site Cleanup Section 3, SFD-7-3
USEPA Region 9

THROUGH: Joe Eidelberg, Chemist
Quality Assurance (QA) Program, MTS-3
USEPA Region 9

FROM: Kathy O'Brien, Project Manager
Environmental Services Assistance Team (ESAT) Region 9
ICF International

ESAT Contract No.: EP-W-13-029
Technical Direction Form No.: 10106100

DATE: September 30, 2015

SUBJECT: Review of Analytical Data, **Tier 3**

Attached are comments resulting from ESAT Region 9 review of the following analytical data:

Site:	Southern Avenue Industrial Area
Site Account No.:	09 WS QB 00
Case No.:	45436
SDG No.:	Y9XT5
Laboratory:	KAP Technologies, Inc. (KAP)
Analysis:	CLP Trace Volatiles, MA No. 2446.0
Samples:	20 Groundwater Samples
Collection Date:	July 23, 24, 27, and 28, 2015
Reviewer:	Estrellita Manuel, ESAT

EXES Data Manager has been updated; the dynamic deliverables were regenerated and are available on the SMO Portal.

If there are any questions, please contact Joe Eidelberg (QA Program/EPA) at (415) 972-3809.

Data Validation Report - **Tier 3**

Case No.: 45436
SDG No.: Y9XT5
Site: Southern Avenue Industrial Area
Laboratory: KAP Technologies, Inc. (KAP)
Analysis: CLP Trace Volatiles, MA No. 2446.0
Reviewer: Estrellita Manuel, ESAT
Date: September 30, 2015

I. SDG SUMMARY

For Sample Information and Laboratory Quality Control (QC), refer to EXES National Functional Guidelines (NFG) data validation reports *Analytical Sample Listing* and *Organic Analytic Sequence*.

Field QC

Field Blanks (FB):	None.
Trip Blanks (FB):	Y9Y05, Y9Y06, Y9Y07, and Y9Y08 (in SDG Y9XW3).
Equipment Blanks (EB):	Y9Y00 (in SDG Y9XW3).
Background Samples (BG):	None.
Field Duplicates (D1):	Y9XT6 and Y9XT7.
Field Duplicates (D2):	Y9XZ5 and Y9XZ6.

Tables

1A:	Analytical Results with Qualifications
1B:	Data Qualifier Definitions for Organic Data Review

CLP PO Action

None.

Sampling Issues

Samples Y9XT6 and Y9XW0 were received at the laboratory with one broken vial. There was enough sample volume in the other two vials for analysis.

Additional Comments

The trichloroethene present in sample Y9XY8 was incorrectly reported as nondetected (i.e., a false negative). The laboratory submitted revised data (Form I, quantitation report, and chromatogram) and mass spectra upon request, on 09/25/15 (see Table 1A for concentration). The revised result has been entered into the EXES Data Manager.

Samples Y9XT8, Y9XZ2, and Y9XW0 were analyzed at 5-, 5-, and 10-fold dilutions, respectively, due to high concentrations of analytes. The quantitation limits for these samples in Table 1A have been raised to account for the dilution.

All standards and spiking solutions were analyzed before the expiration date.

The recovery for DMC chloroethane-d5 exceeds QC limit in sample Y9XZ9 (134%), indicating potential high bias in detected results; qualification is not necessary because the associated target analytes are not detected.

Other than laboratory artifacts (retention time 2.6-3.0, 10.6, and 11.4 minutes), tentatively identified compounds (TIC) were found in samples Y9XW2, Y9XY7, Y9XZ4, Y9XZ8, and Y9XZ9 (see attached Form 1B).

The laboratory performed manual peak integration on chromatograms for some calibrations and samples. Manual integrations were reviewed and found to be in compliance with CLP Statement of Work (SOW) requirements.

This report was prepared in accordance with the following documents:

- *Addition of 1,2,3-Trichloropropane*, Modified Analysis 2446.0, June 2, 2015;
- *USEPA Contract Laboratory Program Statement of Work for Organics Superfund Methods, Multi-Media, Multi-Concentration*, SOM02.2, August 2014;
- *USEPA National Functional Guidelines for Superfund Organic Methods Data Review*, August 2014.

For technical definitions, refer to *Exhibit G (Glossary of Terms), USEPA Contract Laboratory Program Statement of Work for Organics Superfund Methods, Multi-Media, Multi-Concentration*, SOM02.2, August 2014.

II. VALIDATION SUMMARY

The data were evaluated based on the following parameters:

	Parameter	Acceptable	Comment
1	Data Completeness	Yes	
2	Holding Time/Preservation	Yes	
3	GC/MS Tune/GC Performance	Yes	
4	Initial Calibration	Yes	
5	Continuing Calibration Verification (CCV)	No	B
6	Laboratory Blanks	Yes	C
7	Equipment/Trip Blanks	Yes	C
8	Deuterated Monitoring Compounds (DMCs)	Yes	
9	Matrix Spike/Matrix Spike Duplicates (MS/MSDs)	Yes	
10	Internal Standards	Yes	
11	Compound Identification	Yes	
12	Compound Quantitation and Reported CRQLs	Yes	A, D
13	System Performance	Yes	
14	Field Duplicate Sample Analysis	Yes	

III. VALIDITY AND COMMENTS

A. Results above the method detection limit (MDL) but below the contract required quantitation limit (CRQL) are estimated and flagged "J" in Table 1A. The results are considered qualitatively acceptable but quantitatively unreliable due to uncertainties in analytical precision near the quantitation limit.

B. Results for the following analytes are qualified as estimated due to large percent differences (%Ds) in associated CCVs and are flagged "UJ" in Table 1A.

- Isopropylbenzene in sample Y9XW2 and trip blank Y9Y07 and method blanks VBLK7U and VBLK7X.
- 1,2-Dibromoethane in trip blank Y9Y07 and method blank VBLK7X.

The following values exceed the ±25.0% validation criterion.

Analyte	Calibration Date and Time	%D
Isopropylbenzene	08/05/15 00:53	+25.4
Isopropylbenzene	08/05/15 16:19	+25.6
1,2-Dibromoethane	08/05/15 16:19	+30.6

C. The following results are qualified as nondetected due to method blank and trip blank contamination and are flagged "U" in Table 1A.

- Acetone in samples Y9XZ8 and Y9XZ9.
- Methylene chloride in samples Y9XY7, Y9XZ2, Y9XZ4, and Y9XZ8.

Methylene chloride is found in method blank VBLK7S and trip blank Y9Y07; acetone is found in trip blank Y9Y07 (See Table 1A for concentrations). The result for methylene chloride in Y9XZ2 and results for acetone in Y9XZ8 and Y9XZ9 are reported in Table 1A as nondetected at the reported concentrations.

Results for methylene chloride in samples Y9XT5 (0.30 µg/L) and Y9XT6 (0.26 µg/L) are not qualified because it is not found in the associated method blank and trip blank. Methylene chloride in these samples may be a laboratory artifact since it is found in method blank VBLK7S and trip blank Y9Y07 (see Table 1A for concentrations).

D. The samples listed in the table below required further dilution to obtain results within the calibration range for the indicated analytes. Results for these analytes are reported in Table 1A from the higher diluted analyses.

Sample	Dilution	Analyte
Y9XT6	10	cis-1,2-Dichloroethene
Y9XT7	10	cis-1,2-Dichloroethene
Y9XT8	50	cis-1,2-Dichloroethene
Y9XW0	50	cis-1,2-Dichloroethene
Y9XY9	10	cis-1,2-Dichloroethene
Y9XZ0	10	cis-1,2-Dichloroethene
Y9XZ1	10	cis-1,2-Dichloroethene and trichloroethene
Y9XZ2	50	cis-1,2-Dichloroethene
Y9XZ9	5.0	cis-1,2-Dichloroethene.

TABLE 1B

DATA QUALIFIER DEFINITIONS FOR ORGANIC DATA REVIEW

The definitions of the following qualifiers are prepared according to the document, "USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review," June 2008.

U The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the adjusted Contract Required Quantitation Limit (CRQL) for sample and method.

J The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample (due either to the quality of the data generated because certain quality control criteria were not met, or the concentration of the analyte was below the CRQL).

NJ The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

UJ The analyte was not detected at a level greater than or equal to the adjusted CRQL. However, the reported adjusted CRQL is approximate and may be inaccurate or imprecise.

R The sample results are unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.

MEMORANDUM

TO: Karen Jurist, Remedial Project Manager
Site Cleanup Section 3, SFD-7-3
USEPA Region 9

THROUGH: Joe Eidelberg, Chemist
Quality Assurance (QA) Program, MTS-3
USEPA Region 9

FROM: Kathy O'Brien, Project Manager
Environmental Services Assistance Team (ESAT) Region 9
ICF International

ESAT Contract No.: EP-W-13-029
Technical Direction Form No.: 10106100

DATE: September 30, 2015

SUBJECT: Review of Analytical Data, **Tier 3**

Attached are comments resulting from ESAT Region 9 review of the following analytical data:

Site:	Southern Avenue Industrial Area
Site Account No.:	09 WS QB 00
Case No.:	45436
SDG No.:	Y9XT5
Laboratory:	KAP Technologies, Inc. (KAP)
Analysis:	CLP 1,4-Dioxane by Semivolatile Selected Ion Monitoring
Samples:	16 Groundwater Samples
Collection Date:	July 23, 24, 27, and 28, 2015
Reviewer:	Santiago Lee, ESAT

EXES Data Manager has been updated; the dynamic deliverables will be regenerated upon the completion of the review for trace volatiles analysis.

If there are any questions, please contact Joe Eidelberg (QA Program/EPA) at (415) 972-3809.

Data Validation Report - **Tier 3**

Case No.: 45436
SDG No.: Y9XT5
Site: Southern Avenue Industrial Area
Laboratory: KAP Technologies, Inc. (KAP)
Analysis: CLP 1,4-Dioxane by Semivolatile Selected Ion Monitoring (MA No. 2445.0)
Reviewer: Santiago Lee, ESAT
Date: September 30, 2015

I. SDG SUMMARY

For Sample Information and Laboratory Quality Control (QC), refer to EXES National Functional Guidelines (NFG) data validation reports *Analytical Sample Listing* and *Organic Analytic Sequence*.

Field QC

Field Blanks (FB):	None.
Equipment Blanks (EB):	Y9Y00 (in SDG Y9XW3).
Background Samples (BG):	None.
Field Duplicates (D1):	Y9XT6 and Y9XT7.
Field Duplicates (D2):	Y9XZ5 and Y9XZ6.

Tables

1A:	Analytical Results with Qualifications
1B:	Data Qualifier Definitions for Organic Data Review

CLP PO Action

None.

Sampling Issues

None.

Additional Comments

All standards and spiking solutions were analyzed before the expiration date.

The laboratory performed manual peak integration on chromatograms for some calibrations and samples. Manual integrations were reviewed and found to be in compliance with CLP Statement of Work (SOW) requirements.

This report was prepared in accordance with the following documents:
- *1,4,-Dioxane Analysis with Lower CRQL,* Modified Analysis 2445.0, June 2, 2015;
- *USEPA Contract Laboratory Program Statement of Work for Organics Superfund Methods, Multi-Media, Multi-Concentration,* SOM02.2, August 2014;
- *USEPA National Functional Guidelines for Superfund Organic Methods Data Review*, August 2014.

For technical definitions, refer to *Exhibit G (Glossary of Terms), USEPA Contract Laboratory Program Statement of Work for Organics Superfund Methods, Multi-Media, Multi-Concentration,* SOM02.2, August 2014.

II. VALIDATION SUMMARY

The data were evaluated based on the following parameters:

	Parameter	Acceptable	Comment
1	Data Completeness	Yes	
2	Holding Time/Preservation	Yes	
3	GC/MS Tune/GC Performance	N/A	
4	Initial Calibration	Yes	
5	Continuing Calibration Verification (CCV)	Yes	
6	Laboratory Blanks	Yes	
7	Field/Equipment Blanks	Yes	
8	Deuterated Monitoring Compounds (DMCs)	Yes	
9	Laboratory Control Samples (LCSs)	Yes	
10	Matrix Spike/Matrix Spike Duplicates (MS/MSDs)	N/A	
11	Internal Standards	Yes	
12	GPC Performance Check	N/A	
13	Compound Identification	Yes	
14	Compound Quantitation and Reported CRQLs	Yes	A
15	System Performance	Yes	
16	Field Duplicate Sample Analysis	Yes	

N/A = Not Applicable

III. VALIDITY AND COMMENTS

A. Results above the method detection limit (MDL) but below the contract required quantitation limit (CRQL) are estimated and flagged "J" in Table 1A. The results are considered qualitatively acceptable but quantitatively unreliable due to uncertainties in analytical precision near the quantitation limit.

TABLE 1B

DATA QUALIFIER DEFINITIONS FOR ORGANIC DATA REVIEW

The definitions of the following qualifiers are prepared according to the document, "USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review," June 2008.

U The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the adjusted Contract Required Quantitation Limit (CRQL) for sample and method.

J The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample (due either to the quality of the data generated because certain quality control criteria were not met, or the concentration of the analyte was below the CRQL).

NJ The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

UJ The analyte was not detected at a level greater than or equal to the adjusted CRQL. However, the reported adjusted CRQL is approximate and may be inaccurate or imprecise.

R The sample results are unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.

Memorandum

To:	Karen Jurist, Remedial Project Manager Site Cleanup Section 3, SFD-7-3 USEPA Region 9
Through:	Joe Eidelberg, Chemist Quality Assurance Section, EMD-3-2 USEPA Region 9
From:	Kathy O'Brien, Project Manager KO ICF, Environmental Services Assistance Team (ESAT) Region 9
Date:	November 21, 2016
Re:	Review of Analytical Data, **Tier 3**

Attached are comments resulting from ESAT Region 9 review of the following analytical data:

Site:	Southern Avenue Industrial Area
Site Account No.:	09 WS QB 00
Case No.:	46452
SDG No.:	YA813
Laboratory:	Eurofins Spectrum Analytical, Inc (EAS)
Analysis:	CLP 1,4-Dioxane by Semivolatile Selective Ion Monitoring (SIM)
Samples:	Four Groundwater Samples
Collection Date:	September 22, 2016
Reviewer:	Lisa Brooker, ESAT

EXES Data Manager has been updated with the results of this review and the validation label revised to S3VEM; the dynamic deliverables were regenerated and are available on the SMO Portal.

If there are any questions, please contact Joe Eidelberg (QA Program/EPA) at (415) 972-3809.

Data Validation Report - **Tier 3**

Case No.: 46452
SDG No.: YA813
Site: Southern Avenue Industrial Area
Laboratory: Eurofins Spectrum Analytical, Inc (EAS)
Analysis: CLP 1,4-Dioxane by Semivolatile Selective Ion Monitoring (SIM)
Reviewer: Lisa Brooker, ESAT
Date: November 21, 2016

I. SDG SUMMARY

For Sample Information and Laboratory Quality Control (QC), refer to EXES National Functional Guidelines (NFG) data validation reports *Analytical Sample Listing* and *Organic Analytic Sequence*. EXES Data Manager has been updated with the results of this review and the validation level revised to S3VEM; the dynamic deliverables were regenerated and are available on the SMO Portal. The data qualifier definitions, as described in pages 6 and 7 of the National Functional Guidelines, are attached to this report.

Field QC

Field Blanks (FB):	None.
Equipment Blanks (EB):	None.
Background Samples (BG):	None.
Field Duplicates (D1):	YA815 and YA816.

CLP PO Action

Results for 1,4-dioxane in all samples are qualified as estimated (UJ) due to holding time exceedance (see Comment A).

Sampling Issues

None.

Additional Comments

Matrix spike/matrix spike duplicate (MS/MSD) analysis was not requested.

The laboratory performed manual peak integration for some sample chromatograms. Manual integrations were reviewed and found to be in compliance with CLP Statement of Work (SOW) requirements.

All standards and spiking solutions were analyzed before the expiration date.

This report was prepared in accordance with the following documents:

- *1,4-Dioxane Analysis with Lower CRQL*, Modified Analysis 2445.2, September 1, 2016;
- *USEPA Contract Laboratory Program Statement of Work for Organics Superfund Methods, Multi-Media, Multi-Concentration*, SOM02.3, September 2015 and
- *USEPA National Functional Guidelines for Superfund Organic Methods Data Review*, August 2014.

For technical definitions, refer to *Exhibit G (Glossary of Terms), USEPA Contract Laboratory Program Statement of Work for Organics Superfund Methods, Multi-Media, Multi-Concentration*, SOM02.3, September 2015.

II. VALIDATION SUMMARY

The data were evaluated based on the following parameters:

	Parameter	Acceptable	Comment
1	Data Completeness	Yes	
2	Holding Time/Preservation	No	A
3	GC/MS Instrument Performance Check	N/A	
4	Initial Calibration	Yes	
5	Continuing Calibration Verification (CCV)	Yes	
6	Laboratory Blanks	Yes	
7	Field/Equipment Blanks	N/A	
8	Deuterated Monitoring Compounds (DMCs)	Yes	
9	Matrix Spike/Matrix Spike Duplicates (MS/MSDs)	N/A	
10	Laboratory Control Sample (LCS)	Yes	
11	Internal Standards	Yes	
12	GPC Performance Check	N/A	
13	Compound Identification	Yes	
14	Compound Quantitation and Reported CRQLs	Yes	
15	System Performance	Yes	
16	Field Duplicate Sample Analysis	Yes	

N/A = Not Applicable.

III. VALIDITY AND COMMENTS

A. Results for the following analyte are qualified as estimated due to holding time exceedance and are flagged "UJ."

- 1,4-Dioxane in all samples.

The samples were extracted 19 days after collection, exceeding the 7-day technical holding time for water samples. The initial extraction was within holding time; however, the method blank and samples were spiked with the Laboratory Control Sample (LCS) solution instead of the Deuterated Monitoring Compounds (DMC) solution. The samples were re-extracted on October 11, 2016. Results from the re-extracted samples are reported in the SMO Portal.

DATA QUALIFIER DEFINITIONS FOR ORGANIC DATA REVIEW

The definitions of the following qualifiers are prepared according to the document, "National Functional Guidelines for Superfund Organic Methods Data Review," August 2014 (Table 1, pages 6 and 7).

U The analyte was analyzed for, but was not detected above the level of the reported sample quantitation Limit.

J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

J+ The result is an estimated quantity, but the result may be biased high.

J- The result is an estimated quantity, but the result may be biased low.

NJ The analyte has been "tentatively identified" or "presumptively" as present and the associated numerical value is the estimated concentration in the sample.

UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

R The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.

C The target Pesticide or Aroclor analyte identification has been confirmed by Gas Chromatograph/Mass Spectrometer (GC/MS).

X The target Pesticide or Aroclor analyte identification was not confirmed when GC/MS analysis was performed.

I. SDG SUMMARY

For Sample Information and Laboratory Quality Control (QC), refer to EXES National Functional Guidelines (NFG) data validation reports *Analytical Sample Listing* and *Organic Analytic Sequence*. EXES Data Manager has been updated with the results of this review and the validation level revised to S3VEM; the dynamic deliverables were regenerated and are available on the SMO Portal. The data qualifier definitions, as described in pages 6 and 7 of the National Functional Guidelines, are attached to this report.

Field QC

Field Blanks (FB):	None.
Equipment Blanks (EB):	YAB41 (in SDG YAB34).
Background Samples (BG):	None.
Field Duplicates (D1):	YAB18 and YAB19.
Field Duplicates (D2):	YAB27 and YAB28.

CLP PO Action

None.

Sampling Issues

None.

Additional Comments

The preparation logbook pages for solutions VP61244 and VP61247 and the mass spectra for the additional analyte in the initial calibration were missing from the data package. A Communication Record Log (CRL) was sent to the laboratory requesting the information. Data quality is not likely to be affected and this report is considered final.

Other than a laboratory artifact (retention time of 9.6 minutes), tentatively identified compounds (TICs) were not found in the samples.

The laboratory performed manual peak integration for some calibration and sample chromatograms. Manual integrations were reviewed and are in compliance with CLP Statement of Work (SOW) requirements.

This report was prepared in accordance with the following documents:

- *Addition of Analyte 1,2,3-Trichloropropane*, Modified Analysis 2750.0, March 23, 2017;
- *USEPA Contract Laboratory Program Statement of Work for Organics Superfund Methods, Multi-Media, Multi-Concentration*, SOM02.4, October 2016; and
- *USEPA National Functional Guidelines for Superfund Organic Methods Data Review*, January 2017.

For technical definitions, refer to *Exhibit G (Glossary of Terms), USEPA Contract Laboratory Program Statement of Work for Organics Superfund Methods, Multi-Media, Multi-Concentration*, SOM02.4.

II. VALIDATION SUMMARY

The data were evaluated based on the following parameters:

	Parameter	Acceptable	Comment
1	Data Completeness	Yes	
2	Preservation and Holding Times	Yes	
3	GC/MS Instrument Performance Check	Yes	
4	Initial Calibration	Yes	
5	Continuing Calibration Verification (CCV)	Yes	
6	Laboratory Blank	Yes	B
7	Field/Equipment Blanks	Yes	
8	Deuterated Monitoring Compound (DMC)	Yes	
9	Matrix Spike/Matrix Spike Duplicate (MS/MSD)	Yes	
10	Internal Standard	No	C
11	Compound Identification	Yes	
12	Compound Quantitation and Reported CRQL	Yes	A
13	System Performance	Yes	
14	Field Duplicate Sample Analysis	Yes	

III. VALIDITY AND COMMENTS

A. Results above the method detection limit (MDL) but below the contract required quantitation limit (CRQL) are estimated and flagged "J." Results are considered qualitatively acceptable but quantitatively unreliable due to uncertainties in analytical precision near the quantitation limit.

B. The following results are qualified as nondetected due to method blank and storage blank contamination and are flagged "U."

- Methylene chloride in all samples except YAB26 and YAB27.

Methylene chloride is present in method blanks VBLK07 (3.6 µg/kg) and VBLK08 (1.3 µg/kg) and in storage blank VHBLK01 (1.4 µg/kg). Results for methylene chloride that are less than or equal to the CRQL are qualified as non-detected at the CRQL.

C. Results for the following analytes are qualified as estimated due to low internal standard (IS) areas and are flagged "UJ."

{1,4-Dichlorobenzene-d4}
- Bromoform, 1,3-dichlorobenzene, 1,4-dichlorobenzene, 1,2-dichlorobenzene, 1,2-dibromo-3-chloropropane, 1,2,4-trichlorobenzene, and 1,2,3-trichlorobenzene in sample YAB28.

The IS areas outside QC limits are shown below.

Sample	Internal Standard	Area	QC Limit
YAB28	1,4-Dichlorobenzene-d4	173603	182358-729432
YAB28RE	1,4-Dichlorobenzene-d4	131751	154793-619172

Since results are nondetected, false negatives may exist.

Sample YAB28 was reanalyzed and the reanalysis results are similar for the internal standard; however, recoveries for the deuterated monitoring compound 1,2-dichloropropane-d6 were outside the QC limit of 70-120% in original analysis (129%) but within the QC limit in the reanalysis (89%). Therefore, results from the reanalysis of sample YAB28 are reported in the EXES Data Manager.

DATA QUALIFIER DEFINITIONS FOR ORGANIC DATA REVIEW

The definitions of the following qualifiers are prepared according to the document, "National Functional Guidelines for Superfund Organic Methods Data Review," January 2017 (Table 1, pages 6 and 7).

U The analyte was analyzed for, but was not detected above the level of the reported sample quantitation Limit.

J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

J+ The result is an estimated quantity, but the result may be biased high.

J- The result is an estimated quantity, but the result may be biased low.

NJ The analyte has been "tentatively identified" or "presumptively" as present and the associated numerical value is the estimated concentration in the sample.

UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

R The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.

C The target Pesticide or Aroclor analyte identification has been confirmed by Gas Chromatograph/Mass Spectrometer (GC/MS).

X The target Pesticide or Aroclor analyte identification was not confirmed when GC/MS analysis was performed.

Memorandum

To:	Karen Jurist, Remedial Project Manager Site Cleanup Section 3, SFD-7-3 USEPA Region 9
Through:	Joe Eidelberg, Chemist Quality Assurance Section, EMD-3-2 USEPA Region 9
From:	Kathy O'Brien, Project Manager KO ICF, Environmental Services Assistance Team (ESAT) Region 9 ESAT Contract No.: EP-W-13-029 Technical Direction No.: 10106166
Date:	July 10, 2017
Re:	Review of Analytical Data, **Tier 3**

Attached are comments resulting from ESAT Region 9 review of the following analytical data:

Site:	Southern Avenue Industrial Area
Site Account No.:	09 WS QB 00
Case No.:	46891
SDG No.:	YAB14
Laboratory:	Chemtech Consulting Group (CHM)
Analysis:	CLP Semivolatiles
Samples:	20 Soil Samples
Collection Date:	April 25 and 26, 2017
Reviewer:	Santiago Lee, ESAT

EXES Data Manager has been updated with the results of this review and the validation level revised to S3VEM; the dynamic deliverables were regenerated and are available on the SMO Portal.

If there are any questions, please contact Joe Eidelberg (QA Program/EPA) at (415) 972-3809.

Data Validation Report - **Tier 3**

Case No.: 46891
SDG No.: YAB14
Site: Southern Avenue Industrial Area
Laboratory: Chemtech Consulting Group (CHM)
Analysis: CLP Semivolatiles
Reviewer: Santiago Lee, ESAT
Date: July 10, 2017

I. SDG SUMMARY

For Sample Information and Laboratory Quality Control (QC), refer to EXES National Functional Guidelines (NFG) data validation reports *Analytical Sample Listing* and *Organic Analytic Sequence*. EXES Data Manager has been updated with the results of this review and the validation level revised to S3VEM; the dynamic deliverables were regenerated and are available on the SMO Portal. The data qualifier definitions, as described in pages 6 and 7 of the National Functional Guidelines, are attached to this report.

Field QC

Field Blanks (FB):	None.
Equipment Blanks (EB):	YAB41 (in SDG YAB34).
Background Samples (BG):	None.
Field Duplicates (D1):	YAB18 and YAB19.
Field Duplicates (D2):	YAB27 and YAB28.

CLP PO Action

None.

Sampling Issues

None.

Additional Comments

In addition to laboratory (retention times of 23.8, 25.8, 27.2, 28.7, and 30.7 minutes), tentatively identified compounds (TICs) were found in all field samples except samples YAB22 (see attached Form 1Bs).

The laboratory performed manual peak integration for some calibration and sample chromatograms. Manual integrations were reviewed and found to be in compliance with CLP Statement of Work (SOW) requirements.

This report was prepared in accordance with the following documents:

- *USEPA Contract Laboratory Program Statement of Work for Organics Superfund Methods, Multi-Media, Multi-Concentration*, SOM02.4, October 2016, and
- *USEPA National Functional Guidelines for Superfund Organic Methods Data Review*, January 2017.

For technical definitions, refer to *Exhibit G (Glossary of Terms), USEPA Contract Laboratory Program Statement of Work for Organics Superfund Methods, Multi-Media, Multi-Concentration*, SOM02.4.

II. VALIDATION SUMMARY

The data were evaluated based on the following parameters:

	Parameter	Acceptable	Comment
1	Data Completeness	Yes	
2	Preservation and Holding Times	Yes	
3	GC/MS Instrument Performance Check	Yes	
4	Initial Calibration	Yes	
5	Continuing Calibration Verification (CCV)	No	B
6	Laboratory Blank	Yes	
7	Field/Equipment Blanks	Yes	
8	Deuterated Monitoring Compound (DMC)	No	C
9	Matrix Spike/Matrix Spike Duplicate (MS/MSD)	No	D
10	Laboratory Control Sample (LCS)	N/A	
11	GPC Performance Check	N/A	
12	Internal Standard	Yes	
13	Analyte Identification	Yes	
14	Analyte Quantitation and Reported CRQL	Yes	A
15	System Performance	Yes	
16	Field Duplicate Sample Analysis	Yes	

N/A = Not Applicable.

III. VALIDITY AND COMMENTS

A. Results above the method detection limit (MDL) but below the contract required quantitation limit (CRQL) are estimated and flagged "J." Results are considered qualitatively acceptable but quantitatively unreliable due to uncertainties in analytical precision near the quantitation limit.

B. Results for the following analyte are qualified as estimated due to percent difference (%D) outside QC limit in a continuing calibration verification (CCV) and are flagged "UJ."

- Hexachlorocyclopentadiene in samples YAB14, YAB15, YAB21, YAB27, and YAB28.

The %D of -57.4% reported for hexachlorocyclopentadiene in 05/04/17 12:33 CCV exceeds the ±50.0% validation criterion for closing CCVs.

C. Results for the following analytes are qualified as estimated due to low DMC recoveries and are flagged "UJ."

{1,4 Dioxane-d8}
- 1,4-Dioxane in samples YAB22, YAB27, and YAB28.

{4,6-Dinitro-2-methylphenol-d2}
- 4,6-Dinitro-2-methylphenol in samples YAB15 and YAB27.

DMC recoveries for the qualifications listed above are shown below.

Sample	DMC	% Recovery	QC Limit
YAB22	1,4-Dioxane-d8	38	40-110
YAB27	1,4-Dioxane-d8	17	40-110
YAB28	1,4-Dioxane-d8	28	40-110
YAB15	4,6-Dinitro-2-methylphenol-d2	9	10-130
YAB27	4,6-Dinitro-2-methylphenol-d2	7	10-130

Since qualified results are nondetected, false negatives may exist. The samples listed above were not re-extracted.

The recovery for DMC 4-chloroaniline-d4 exceeds the QC limit of 1-145% in sample YAB31 (159%), indicating potential high bias in detected results; qualification is not necessary because the associated target analyte is not detected.

D. The relative percent differences (RPDs) for the following analytes in QC samples YAB17MS and YAB17MSD do not meet the criteria for precision specified in the SOW, as shown below.

Analyte	RPD, %	QC Limit, %
Phenol	43	35
N-Nitroso-di-n-propylamine	39	38
4-Chloro-3-methylphenol	43	33
Acenaphthene	35	19
4-Nitrophenol	61	50
Pentachlorophenol	63	47

These results may indicate poor laboratory technique or matrix effects which may interfere with analysis. This uncertainty should be evaluated in the context of project data quality objectives to determine data usability.

DATA QUALIFIER DEFINITIONS FOR ORGANIC DATA REVIEW

The definitions of the following qualifiers are prepared according to the document, "National Functional Guidelines for Superfund Organic Methods Data Review," January 2017 (Table 1, pages 6 and 7).

U The analyte was analyzed for, but was not detected above the level of the reported sample quantitation Limit.

J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

J+ The result is an estimated quantity, but the result may be biased high.

J- The result is an estimated quantity, but the result may be biased low.

NJ The analyte has been "tentatively identified" or "presumptively" as present and the associated numerical value is the estimated concentration in the sample.

UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

R The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.

C The target Pesticide or Aroclor analyte identification has been confirmed by Gas Chromatograph/Mass Spectrometer (GC/MS).

X The target Pesticide or Aroclor analyte identification was not confirmed when GC/MS analysis was performed.

Memorandum

To:	Karen Jurist, Remedial Project Manager Site Cleanup Section 3, SFD-7-3 USEPA Region 9
Through:	Joe Eidelberg, Chemist Quality Assurance Section, EMD-3-2 USEPA Region 9
From:	Kathy O'Brien, Project Manager ICF, Environmental Services Assistance Team (ESAT) Region 9 ESAT Contract No.: EP-W-13-029 Technical Direction No.: 10106166
Date:	June 30, 2017
Re:	Review of Analytical Data, **Tier 3**

Attached are comments resulting from ESAT Region 9 review of the following analytical data:

Site:	Southern Avenue Industrial Area
Site Account No.:	09 WS QB 00
Case No.:	46891
SDG No.:	YAB14
Laboratory:	Chemtech Consulting Group (CHM)
Analysis:	CLP Aroclors
Samples:	20 Soil Samples
Collection Date:	April 25 and 26, 2017
Reviewer:	Santiago Lee, ESAT

EXES Data Manager has been updated with the results of this review and the validation level revised to S3VEM; the dynamic deliverables were regenerated and are available on the SMO Portal.

If there are any questions, please contact Joe Eidelberg (QA Program/EPA) at (415) 972-3809.

Data Validation Report - **Tier 3**

Case No.: 46891
SDG No.: YAB14
Site: Southern Avenue Industrial Area
Laboratory: Chemtech Consulting Group (CHM)
Analysis: CLP Aroclors
Reviewer: Santiago Lee, ESAT
Date: June 30, 2017

I. SDG SUMMARY

For Sample Information and Laboratory Quality Control (QC), refer to EXES National Functional Guidelines (NFG) data validation reports *Analytical Sample Listing* and *Organic Analytic Sequence*. EXES Data Manager has been updated with the results of this review and the validation level revised to S3VEM; the dynamic deliverables were regenerated and are available on the SMO Portal. The data qualifier definitions, as described in pages 6 and 7 of the National Functional Guidelines, are attached to this report.

Field QC

Field Blanks (FB):	None.
Equipment Blanks (EB):	YAB41 (in SDG YAB34).
Background Samples (BG):	None.
Field Duplicates (D1):	YAB18 and YAB19.
Field Duplicates (D2):	YAB27 and YAB28.

CLP PO Action

None.

Sampling Issues

None.

Additional Comments

The laboratory performed manual peak integration for some calibration and sample chromatograms. Manual integrations were reviewed and found to be in compliance with CLP Statement of Work (SOW) requirements.

All standards and spiking solutions were analyzed before the expiration date.

This report was prepared in accordance with the following documents:

- *USEPA Contract Laboratory Program Statement of Work for Organics Superfund Methods, Multi-Media, Multi-Concentration*, SOM02.4, October 2016 and
- *USEPA National Functional Guidelines for Superfund Organic Methods Data Review*, January 2017.

For technical definitions, refer to *Exhibit G (Glossary of Terms), USEPA Contract Laboratory Program Statement of Work for Organics Superfund Methods, Multi-Media, Multi-Concentration*, SOM02.4.

II. VALIDATION SUMMARY

The data were evaluated based on the following parameters:

	Parameter	Acceptable	Comment
1	Data Completeness	Yes	
2	Preservation and Holding Times	Yes	
3	Initial Calibration	Yes	
4	Continuing Calibration Verification (CCV)	Yes	
5	Laboratory Blank	Yes	
6	Field/Equipment Blanks	Yes	
7	Surrogate	Yes	
8	Matrix Spike/Matrix Spike Duplicate (MS/MSD)	Yes	
9	Laboratory Control Sample (LCS)	Yes	
10	GPC Performance Check	N/A	
11	Target Analyte Identification	Yes	
12	GC/MS Confirmation	N/A	
13	Target Analyte Quantitation and Reported CRQL	No	A, B
14	System Performance	Yes	
15	Field Duplicate Sample Analysis	Yes	

N/A = Not Applicable.

III. VALIDITY AND COMMENTS

A. Results above the method detection limit (MDL) but below the contract required quantitation limit (CRQL) are estimated and flagged "J." Results are considered qualitatively acceptable but quantitatively unreliable due to uncertainties in analytical precision near the quantitation limit.

B. Results for the following analyte are qualified as estimated due to large percent differences (%Ds) between concentrations on GC columns and are flagged "J."

- Aroclor-1260 in samples YAB15, YAB21, YAB27, and YAB28.

The following %D values exceed the less than 25.0% validation criterion. The lower concentrations are reported in accordance with the Statement of Work.

Analyte	Sample	ZB-MR1 Column Concentration, µg//kg	ZB-MR2 Column Concentration, µg//kg	%D
Aroclor-1260	YAB15	8.8	4.5	97.0%
Aroclor-1260	YAB21	38	23	65.4%
Aroclor-1260	YAB27	11	8.0	33.6%
Aroclor-1260	YAB28	27	13	105.8%

DATA QUALIFIER DEFINITIONS FOR ORGANIC DATA REVIEW

The definitions of the following qualifiers are prepared according to the document, "National Functional Guidelines for Superfund Organic Methods Data Review," January 2017 (Table 1, pages 6 and 7).

U The analyte was analyzed for, but was not detected above the level of the reported sample quantitation Limit.

J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

J+ The result is an estimated quantity, but the result may be biased high.

J- The result is an estimated quantity, but the result may be biased low.

NJ The analyte has been "tentatively identified" or "presumptively" as present and the associated numerical value is the estimated concentration in the sample.

UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

R The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.

C The target Pesticide or Aroclor analyte identification has been confirmed by Gas Chromatograph/Mass Spectrometer (GC/MS).

X The target Pesticide or Aroclor analyte identification was not confirmed when GC/MS analysis was performed.

Data Validation Report – **Tier 2**

Case No.: 44217
SDG No.: MY9DP1
Site: Southern Avenue Industrial Area
Laboratory: Chemtech Consulting Group (CHEM)
Reviewer: Dina Bailey, ESAT
Date: July 2, 2014

As directed by the Contracting Officer Representative (COR), a Tier 2 data review was performed. The review consisted of a Tier 3 level review for samples MY9DP4, MY9DQ5, MY9DQ9, MY9DS5, and associated field QC samples. For the remaining samples, the reviewer checked the SDG narrative for QC issues, confirmed EXES qualifiers, and added calibration qualifiers as necessary.

I. SDG SUMMARY

For Sample Information and Laboratory QC, refer to EXES National Functional Guideline Report #03, *Analytical Sample Listing*.

Field QC

Field Blanks (FB):	None Provided
Equipment Blanks (EB):	**MY9DS7 and MY9DS8**
Background Samples (BG):	None Provided
Field Duplicates (D1):	MY9DP1 and MY9DP2
Field Duplicates (D2):	**MY9DS4 and MY9DS5**

Tables

1A:	Analytical Results with Qualifications
1B:	Data Qualifier Definitions for Inorganic Data Review

CLP PO Action

None.

Sampling Issues

Equipment blank MY9DS7 has contamination above the CRQL for chromium (2.8 ug/L), manganese (4.0 ug/L), nickel (15.7 ug/L), and zinc (3.1 ug/L). Equipment blank MY9DS8 has contamination above the CRQL for chromium (2.8 ug/L), nickel (1.5 ug/L), and zinc (4.1 ug/L) (see Comment C).

Tier 2 Review Comments

EXES preservation qualification
Cyanide nondetected results in samples MY9DQ6 and MY9DQ7 should not be qualified with R-flag (as rejected) since the chain-of-custody records (COCs) and the laboratory preparation logs indicate adequate sample preservation to a pH greater than 12. ESAT replaced the R-flags with "U" (presented in italics) in Table 1A.

EXES blank qualification (forms review only)
Results listed below should not be qualified as nondetected because the analytes were not found in the associated blanks. Table 1A has been revised as follows (revisions in the table are presented in italics):

Analyte	Sample	Result, ug/L	Flag (see Comment A)
Aluminum	PBW04	0.604	J
Copper	MY9DP1	1.4	J
	MY9DP6	2.4	J
	MY9DQ4	2.4	J
	MY9DQ6	2.0	J
	MY9DQ7	2.3	J
	MY9DQ8	2.4	J
	MY9DR0	2.0	J
Selenium	MY9DP1	2.3	J
	MY9DP2	1.6	J
	MY9DP3	1.7	J
	MY9DQ7	0.99	J
	MY9DQ8	0.60	J
	MY9DR0	1.1	J
Thallium	MY9DP5	0.080	J
	MY9DQ7	0.082	J

EXES calibration qualification (forms review only)
All calibration criteria for Forms 2, 14, and 16 were met; no data were qualified by EXES.

SDG Narrative
The following data quality issues are indicated by the SDG Narrative:
1. Matrix spike recovery for antimony is outside control limit (see Comment D).
2. Serial dilution results for potassium and vanadium are outside control limit (see comment E).

The SDG narrative indicates that cooler temperature indicator bottles were absent; however, Form DC-1 indicates they were present in the coolers received on 03/27/14 and 03/28/14.

Additional Comments

The samples in SDG MY9DP1 were analyzed for CLP metals. Calcium, iron, magnesium, potassium, and sodium were analyzed by Inductively Coupled Plasma-Atomic Emission Spectroscopy (ICP-AES). Aluminum, antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, manganese, nickel, selenium, silver, thallium, vanadium, and zinc were analyzed by Inductively Coupled Plasma-Mass Spectroscopy (ICP-MS). Mercury was analyzed by Cold Vapor Atomic Absorption (CVAA). Cyanide was analyzed by midi-distillation and spectrophotometry. The COCs indicate that cyanide was not requested for samples MY9DP3, MY9DQ1, and MY9DQ4.

The internal standard (IS) scandium-45 relative intensity (RI) for samples MY9DP4 (144%), MY9DQ5 (146%), MY9DQ9 (131%), and MY9DS4 (127%) exceeded the control limit of 60%-125%. These samples were re-analyzed at a 2-fold dilution as required by the SOW and the RIs are within control limit. Results for aluminum, arsenic, beryllium, chromium, cobalt, copper, manganese, nickel, selenium, vanadium, and zinc in

MY9DP4, MY9DQ5, MY9DQ9, and MY9DS4 are reported from the 2-fold dilution.

Sample MY9DS5 was diluted at 25-fold due to a high concentration of manganese that exceeds the calibration range. The CRQL for manganese in MY9DS5 is increased by a factor of 25 to reflect dilution.

All method requirements specified in the EPA Contract Laboratory Program (CLP) Inorganic Statement of Work (SOW), except as noted, have been met.

This report was prepared in accordance with the following documents:

- *USEPA Contract Laboratory Program Statement of Work for Inorganic Superfund Methods (Multi-Media, Multi-Concentration)* ISM01.2, January 2010;
- *Modifications Updating ISM01.2 to ISM01.3*; and
- *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Data Review*, January 2010.

For technical definitions, refer to *Exhibit G (Glossary of Terms), USEPA Contract Laboratory Program Statement of Work for Inorganic Superfund Methods (Multi-Media, Multi-Concentration)* ISM01.3.

II. VALIDATION SUMMARY

The data were evaluated based on the following parameters:

	Parameter	Acceptable	Comment
1.	Data Completeness	Yes	
2.	Preservation and Holding Times	Yes	
3.	ICP-MS Tune Analysis	Yes	
4.	Calibration	Yes	
	a. Initial	Yes	
	b. Initial and Continuing Calibration Verification	Yes	
5.	Blanks	No	B,C

14.	Overall Assessment	Yes	

III. VALIDITY AND COMMENTS

A. Results above the method detection limit (MDL) but below the contract required quantitation limit (CRQL) are estimated and flagged "J" in Table 1A. Results are considered qualitatively acceptable but quantitatively unreliable due to uncertainties in analytical precision near the quantitation limit.

B. The following results are qualified as non-detected (U) in Table 1A due to low level initial calibration blank (ICB), continuing calibration blank (CCB), and preparation

blank (PB) contamination.

- Aluminum in equipment blanks MY9DS7 and MY9DS8;
- Antimony in samples MY9DP4, MY9DQ5, MY9DQ9, MY9DS4, and MY9DS5;
- Iron in preparation blank PBW01;
- Mercury in sample MY9DP4 and in preparation blank PBW02;
- Potassium in sample MY9DQ9 and in preparation blank PBW01;
- Selenium in sample MY9DP4;
- Sodium in equipment blank MY9DS8; and
- Cyanide in samples MY9DP4, MY9DQ5, MY9DQ9, and MY9DS4 and equipment blank MY9DS8.

Analyte amounts greater than the MDL but less than the CRQL were found in the following blanks at the concentrations listed below.

Analyte	Blank	Concentration, µg/L
Aluminum	CCB47/CCB49/CCB50/PBW04	0.448/0.491/0.460/0.604
Antimony	ICB29/CCB45/CCB46/CCB47	0.070/0.062/0.056/0.077
	CCB48/CCB49/CCB50	0.072/0.074/0.075
Iron	ICB43/CCB79	13.3/18.4
Mercury	ICB39/CCB18/CCB19	0.025/0.037/0.041
Potassium	ICB43/CCB79/CCB80/CCB81	219/281/691/957
Selenium	CCB59	0.248
Sodium	CCB79	256
Cyanide	ICB01	3.149

Sample results that are greater than or equal to the MDL but less than or equal to the CRQL are reported as non-detected (U) at the respective CRQL.

C. The following results are qualified as estimated and flagged "J+" in Table 1A due to equipment blank (EB) contamination.

- Chromium, nickel, and zinc in samples MY9DQ5, MY9DQ9, MY9DS4, and MY9DS5.

Analyte amounts greater than the CRQL were found in the following equipment blanks at the concentrations presented below.

Analyte	Equipment Blank	Concentration, µg/L
Chromium	MY9DS7 and MY9DS8	2.8 and 2.8
Nickel	MY9DS7 and MY9DS8	15.7 and 1.5
Zinc	MY9DS7 and MY9DS8	3.1 and 4.1

For other field samples in this SDG, chromium, nickel and zinc results that are greater than the CRQL but less than 10 times the blank result should be qualified as "J+".

D. The following results are estimated and flagged "UJ" in Table 1A because matrix spike recovery is outside method QC limit.

- Antimony in samples MY9DP4, MY9DQ5, MY9DQ9, MY9DS4, and MY9DS5.

Matrix spike recovery for antimony in QC sample MY9DP4S does not meet the 75-125% criterion for accuracy as listed below.

Analyte	% Recovery
Antimony	63

Results for antimony in the samples listed above are considered quantitatively uncertain.

The following post-digestion spike recovery was reported for antimony in QC sample MY9DP4A.

Analyte	Post-Digestion Spike, % Recovery
Antimony	103

Since the antimony post-digestion spike recovery is acceptable, the unacceptable pre-digestion spike recovery may indicate poor laboratory technique or matrix effects which may interfere with the analysis.

Antimony results for other field samples in this SDG should be qualified as estimated based on low matrix spike recovery.

E. The following results are estimated and flagged "J" or "UJ" in Table 1A because serial dilution results are outside method QC limit.

- Potassium and vanadium in samples MY9DP4, MY9DQ5, MY9DQ9, MY9DS4, and MY9DS5.

Percent differences for serial dilution analysis of MY9DP4L do not meet the ±10% difference criterion for the analytes presented below.

Analyte	% Difference
Potassium	16
Vanadium	31

Results for potassium and vanadium in the samples listed above are considered quantitatively uncertain. Chemical and physical interferences may exist due to sample matrix effects.

Potassium and vanadium results for other field samples in this SDG should be qualified as estimated based on the serial dilution percent difference.

F. The following field duplicate results do not meet the ±20% relative percent difference (RPD) criterion for precision as shown below.

MY9DS4 and MY9DS5 (D2)

Analyte	RPD
Aluminum	102
Barium	38
Iron	106
Nickel	95
Zinc	60

Results for the field duplicate pairs do not meet the absolute difference ≤CRQL criterion for precision as listed below.

Analyte	MY9DS4 (D2), µg/L	MY9DS5 (D2), µg/L	Difference, µg/L	CRQL, µg/L
Arsenic	4.7	3.3	1.4	1.0
Chromium	12.2	3.2	9.0	2.0
Copper	4.9	2.3	2.6	2.0

The effect on data quality is not known.

TABLE 1B

DATA QUALIFIER DEFINITIONS FOR INORGANIC DATA REVIEW

The definitions of the following qualifiers are prepared in accordance with the document *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Data Review*, January 2010.

U	The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
R	The data are unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control (QC) criteria. The analyte may or may not be present in the sample.
UJ	The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

Data Validation Report - **Tier 2**

Case No.: 44217
SDG No.: Y9DS0 and Y9DQ5
Site: Southern Avenue Industrial Area
Laboratory: KAP Technologies, Inc. (KAP)
Reviewer: Santiago Lee, ESAT
Date: June 18, 2014

As directed by the Contracting Officer Representative (COR), a Tier 2 data review was performed. The review consisted of a Tier 3 validation of samples Y9DP4, Y9DQ5, Y9DQ9, and Y9DS5 and associated field QC samples.

I. SDG SUMMARY

For Sample Information and Laboratory QC, refer to EXES National Functional Guideline Report #06, *Analytical Sample Listing*.

Field QC

Field Blanks (FB):	Not Provided
Equipment Blanks (EB):	**Y9DS8** and **Y9DS7**
Background Samples (BG):	Not Provided
Field Duplicates (D3):	Y9DP1 and Y9DP2
Field Duplicates (D4):	**Y9DS4** and **Y9DS5**

Tables

1A:	Analytical Results with Qualifications
1B:	Data Qualifier Definitions for Organic Data Review

CLP PO Action

None.

Sampling Issues

1. For samples Y9DP2, Y9DP6, Y9DQ1, Y9DQ6, Y9DQ8, Y9DQ9, and Y9DS5 and equipment blanks Y9DS8 and Y9DS7, one bottle was broken when received. Two bottles for sample Y9DQ5 and three bottles for sample Y9DQ7 were broken when received. There was enough sample volume in the other bottles for analysis.
2. Signature and Date blocks for "Relinquished By" were not completed on page 3 of 3 for the chain of custody record (COC) No. 9-032514-093010-0004.
3. The COCs incorrectly state that samples for "CLP PCB" were collected in "1liter poly"; 1-liter amber glass bottles were received by the laboratory.

Additional Comments

All method requirements specified in the EPA Contract Laboratory Program (CLP) Organic Statement of Work (SOW), except as noted, have been met.

This report was prepared in accordance with the following documents:

- *USEPA Contract Laboratory Program Statement of Work for Organics Analysis, Multi-Media, Multi-Concentration*, SOM01.1, May 2005;
- *Modifications Updating SOM01.1 to SOM01.2*, Amended April 11, 2007; and
- *USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review*, June 2008.

For technical definitions, refer to *Exhibit G (Glossary of Terms), USEPA Contract Laboratory Program Statement of Work for Organics Analysis, Multi-Media, Multi-Concentration*, SOM01.1, May 2005.

II. VALIDATION SUMMARY

The data were evaluated based on the following parameters:

	Parameter	Acceptable	Comment
1	Holding Time/Preservation	Yes	
2	Initial Calibration	Yes	
3	Continuing Calibration Verification (CCV)	Yes	
4	Laboratory Blanks	Yes	
5	Field Blanks	Yes	
6	Surrogate Spikes	Yes	
7	Matrix Spike/Matrix Spike Duplicates (MS/MSDs)	Yes	
8	Laboratory Spike Samples (LCSs)	Yes	
9	GPC Performance Check	N/A	
10	Compound Identification	Yes	
11	GC/MS Confirmation	N/A	
12	Compound Quantitation and Reported CRQLs	Yes	
13	Field Duplicate Sample Analysis	Yes	

N/A = Not Applicable

III. VALIDITY AND COMMENTS

The data reviewed were found to be in compliance with the National Functional Guidelines criteria; no issues requiring qualification of data were observed.

TABLE 1B

DATA QUALIFIER DEFINITIONS FOR ORGANIC DATA REVIEW

The definitions of the following qualifiers are prepared according to the document, "USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review," June 2008.

U The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the adjusted Contract Required Quantitation Limit (CRQL) for sample and method.

J The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample (due either to the quality of the data generated because certain quality control criteria were not met, or the concentration of the analyte was below the CRQL).

NJ The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

UJ The analyte was not detected at a level greater than or equal to the adjusted CRQL. However, the reported adjusted CRQL is approximate and may be inaccurate or imprecise.

R The sample results are unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.

Data Validation Report - **Tier 2**

Case No.: 44217
SDG No.: Y9DS0 and Y9DQ5
Site: Southern Avenue Industrial Area
Laboratory: KAP Technologies, Inc. (KAP)
Reviewer: Santiago Lee, ESAT
Date: June 25, 2014

As directed by the Contracting Officer Representative (COR), a Tier 2 data review was performed. The review consisted of a Tier 3 validation of sample Y9DP4, Y9DQ5, Y9DQ9, and Y9DS5 and associated field QC samples.

I. SDG SUMMARY

For Sample Information and Laboratory QC, refer to EXES National Functional Guideline Report #06, *Analytical Sample Listing*.

Field QC

Field Blanks (FB):	Not Provided
Equipment Blanks (EB):	**Y9DS8** and **Y9DS7**
Background Samples (BG):	Not Provided
Field Duplicates (D3):	Y9DP1 and Y9DP2
Field Duplicates (D4):	**Y9DS4** and **Y9DS5**

Tables

1A:	Analytical Results with Qualifications
1B:	Data Qualifier Definitions for Organic Data Review

CLP PO Action

None.

Sampling Issues

1. Equipment blank Y9DS7 was collected on 03/27/14 but one of three bottles was received by the laboratory on 04/02/14 at 17°C; extraction for SVOC analysis exceeded holding time (see Comment B).
2. Diethylphthalate was found in equipment blank Y9DS8 (10 ug/L); it was not found in sample Y9DP4.
3. For samples Y9DP2, Y9DP6, Y9DQ1, Y9DQ6, Y9DQ8, Y9DQ9, and Y9DS5 and equipment blanks Y9DS8 and Y9DS7, one bottle was broken when received. Two bottles for sample Y9DQ5 and three bottles for sample Y9DQ7 were broken when received. There was enough sample volume in the other bottles for analysis.
4. Signature and Date blocks for "Relinquished By" were not completed on page 3 of 3 for chain of custody record No. 9-032514-093010-0004.

Additional Comments

The preparation logs for solutions 453.47.01 and 453.52.01 were missing from the data package for SDG Y9DQ5. The laboratory submitted the missing preparation logs upon request, on 06/17/14.

Aside from a field artifact (retention time of 7.2 minutes), tentatively identified compounds (TICs) were found in samples Y9DS4 and Y9DS5 (see attached Form 1Ks).

Manual integration was performed on calibrations and samples. Manual integrations were reviewed and found to be in compliance with CLP Statement of Work requirements.

All method requirements specified in the EPA Contract Laboratory Program (CLP) Organic Statement of Work (SOW), except as noted, have been met.

This report was prepared in accordance with the following documents:

- *USEPA Contract Laboratory Program Statement of Work for Organics Analysis, Multi-Media, Multi-Concentration*, SOM01.1, May 2005;
- *Modifications Updating SOM01.1 to SOM01.2*, Amended April 11, 2007; and
- *USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review*, June 2008.

For technical definitions, refer to *Exhibit G (Glossary of Terms), USEPA Contract Laboratory Program Statement of Work for Organics Analysis, Multi-Media, Multi-Concentration*, SOM01.1, May 2005.

II. VALIDATION SUMMARY

The data were evaluated based on the following parameters:

	Parameter	Acceptable	Comment
1	Holding Time/Preservation	No	B
2	GC/MS Tune/GC Performance	Yes	
3	Initial Calibration	Yes	
4	Continuing Calibration Verification (CCV)	No	C
5	Laboratory Blanks	Yes	
6	Field Blanks	Yes	
7	Deuterated Monitoring Compounds (DMCs)	Yes	
8	Matrix Spike/Matrix Spike Duplicates (MS/MSDs)	No	D
9	GPC Performance Check	N/A	
10	Internal Standards	Yes	
11	Compound Identification	Yes	
12	Compound Quantitation and Reported CRQLs	Yes	A
13	System Performance	Yes	
14	Field Duplicate Sample Analysis	Yes	

N/A = Not Applicable

III. VALIDITY AND COMMENTS

A. Results above the method detection limit (MDL) but below the contract required quantitation limit (CRQL) are estimated and flagged "J" in Table 1A. Results are considered qualitatively acceptable but quantitatively unreliable due to uncertainties in analytical precision near the quantitation limit.

B. Results for the following analytes are qualified as estimated due to holding time exceedance and inadequate sample preservation and are flagged "UJ" in Table 1A.

- All analytes in equipment blank Y9DS7.

The extraction of equipment blank Y9DS7 exceeded the 7-day technical holding time as shown below.

Sample	Date Collected	Date Extracted	No. of Days Exceeded
Y9DS7	03/27/14	04/06/14	3

Additionally, equipment blank Y9DS7 was not adequately maintained at the 4˚±2˚C temperature limit specified in the SOW; it was received at the laboratory at a temperature of 17˚C. Since qualified results are nondetected, false negatives may exist.

C. The result for the following analyte is qualified as estimated due to a large percent difference (%D) in the associated CCV and is flagged "UJ" in Table 1A.

- 4-Methylphenol in equipment blank Y9DS8.

A %D of +36.0% was reported for 4-methylphenol in the 04/05/14 06:35 CCV, which exceeds the ±25.0% validation criterion for opening CCVs.

D. The MS/MSD recoveries for 4-chloro-3-methylphenol, 4-nitrophenol, and pentachlorophenol in QC samples Y9DP4MS and Y9DP4MSD do not meet the criteria for accuracy specified in the SOW, as shown below.

Analyte	Y9DP4MS % Recovery	Y9DP4MSD % Recovery	QC limit % Recovery
4-Chloro-3-methylphenol	100	98	23-97
4-Nitrophenol	105	112	10-80
Pentachlorophenol	----	105	9-103

No adverse effect on data quality is expected for sample Y9DP4 since these analytes were not detected in the sample. The effect on data quality for other samples in SDG Y9DS0 is not known.

Results for QC samples Y9DR0MS and Y9DR0MSD (in SDG Y9DQ5) were not reviewed.

TABLE 1B

DATA QUALIFIER DEFINITIONS FOR ORGANIC DATA REVIEW

The definitions of the following qualifiers are prepared according to the document, "USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review," June 2008.

U The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the adjusted Contract Required Quantitation Limit (CRQL) for sample and method.

J The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample (due either to the quality of the data generated because certain quality control criteria were not met, or the concentration of the analyte was below the CRQL).

NJ The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

UJ The analyte was not detected at a level greater than or equal to the adjusted CRQL. However, the reported adjusted CRQL is approximate and may be inaccurate or imprecise.

R The sample results are unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.

MEMORANDUM

TO: Karen Jurist, Remedial Project Manager
Site Cleanup Section 3, SFD-7-3

THROUGH: Joe Eidelberg, Chemist
Quality Assurance (QA) Program, MTS-3

Joseph Eidelberg
Digitally Signed

FROM: Kathy O'Brien, Data Review Task Manager
Region 9 Environmental Services Assistance Team (ESAT)

ESAT Contract No.: EP-W-13-029
Technical Direction Form No.: 10106031

DATE: June 25, 2014

SUBJECT: Review of Analytical Data, **Tier 2**

Attached are comments resulting from ESAT Region 9 review of the following analytical data:

Site:	Southern Avenue Industrial Area
Site Account No.:	09 WS QB 00
CERCLIS ID No.:	CAN000905902
Case No.:	44217
SDG No.:	Y9DS0 and Y9DQ5
Laboratory:	KAP Technologies, Inc. (KAP)
Analysis:	Trace Volatiles
Samples:	24 Groundwater Samples
Collection Date:	March 25, 26, and 27, 2014
Reviewer:	Santiago Lee, ESAT

Data Validation Report - **Tier 2**

Case No.: 44217
SDG No.: Y9DS0 and Y9DQ5
Site: Southern Avenue Industrial Area
Laboratory: KAP Technologies, Inc. (KAP)
Reviewer: Santiago Lee, ESAT
Date: June 25, 2014

As directed by the Contracting Officer Representative (COR), a Tier 2 data review was performed. The review consisted of a Tier 3 validation of sample Y9DP4, Y9DQ5, Y9DQ9, and Y9DS5 and associated field QC samples.

I. SDG SUMMARY

For Sample Information and Laboratory QC, refer to EXES National Functional Guideline Report #06, *Analytical Sample Listing*.

Field QC

Field Blanks (FB):	Not Provided
Equipment Blanks (EB):	**Y9DS8** and **Y9DS7**
Trip Blanks (TB):	**Y9DT0, Y9DT1,** and **Y9DT3**
Background Samples (BG):	Not Provided
Field Duplicates (D3):	Y9DP1 and Y9DP2
Field Duplicates (D4):	**Y9DS4** and **Y9DS5**

Tables

1A:	Analytical Results with Qualifications
1B:	Data Qualifier Definitions for Organic Data Review

CLP PO Action

None.

Sampling Issues

1. Acetone was found in trip blank Y9DT3 (3.4 ug/L); it was not found in samples Y9DQ5, Y9DQ9, Y9DS4, and Y9DS5.
2. For samples Y9DP4 and Y9DS5, one vial was broken when received by the laboratory. There was enough sample volume in the other vials for analysis.
3. Signature and Date blocks for "Relinquished By" were not completed on page 3 of 3 for chain of custody record No. 9-032514-093010-0004.

Additional Comments

Samples Y9DP4 and Y9DQ5 were analyzed at 20-fold and 200-fold dilutions, respectively, due to high levels of target analytes. The quantitation limits for these samples in Table 1A have been raised to account for the dilution.

The mass spectra for 1,2,3-trichloropropane from the low point initial calibration standard were missing from the data packages. The laboratory submitted the missing mass spectra upon request, on 06/17/14.

Aside from laboratory and field artifacts (retention times of 2.5, 2.7/2.9, 4.8/5.0, 10.4/10.7, 11.4, and 15.5 minutes), tentatively identified compounds (TICs) were found in samples Y9DQ9, Y9DS4, and Y9DS5 (see attached Form 1Js).

Manual integration was performed on calibrations and samples. Manual integrations were reviewed and found to be in compliance with CLP Statement of Work requirements.

All method requirements specified in the EPA Contract Laboratory Program (CLP) Organic Statement of Work (SOW), except as noted, have been met.

This report was prepared in accordance with the following documents:

- *Request for Quote (RFQ) for Modified Analysis*, Modification Reference Number 2210.2, March 19, 2014;
- *USEPA Contract Laboratory Program Statement of Work for Organics Analysis, Multi-Media, Multi-Concentration*, SOM01.1, May 2005;
- *Modifications Updating SOM01.1 to SOM01.2*, Amended April 11, 2007; and
- *USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review*, June 2008.

For technical definitions, refer to *Exhibit G (Glossary of Terms), USEPA Contract Laboratory Program Statement of Work for Organics Analysis, Multi-Media, Multi-Concentration*, SOM01.1, May 2005.

II. VALIDATION SUMMARY

The data were evaluated based on the following parameters:

	Parameter	Acceptable	Comment
1	Holding Time/Preservation	Yes	
2	GC/MS Tune/GC Performance	Yes	
3	Initial Calibration	Yes	
4	Continuing Calibration Verification (CCV)	No	C
5	Laboratory Blanks	No	B
6	Field Blanks	Yes	
7	Deuterated Monitoring Compounds (DMCs)	Yes	
8	Matrix Spike/Matrix Spike Duplicates (MS/MSDs)	No	D
9	Internal Standards	Yes	
10	Compound Identification	Yes	
11	Compound Quantitation	Yes	A, E
12	System Performance	Yes	
13	Field Duplicate Sample Analysis	Yes	

N/A = Not Applicable

III. VALIDITY AND COMMENTS

A. Results above the method detection limit (MDL) but below the contract required quantitation limit (CRQL) are estimated and flagged "J" in Table 1A. Results are considered qualitatively acceptable but quantitatively unreliable due to uncertainties in analytical precision near the quantitation limit.

B. The following results are qualified as nondetected due to method blank and storage blank contamination and are flagged "U" in Table 1A.

- Methylene chloride in samples Y9DP4, Y9DQ5, Y9DQ9, Y9DS4, and Y9DS5; equipment blanks Y9DS8 and Y9DS7; and trip blanks Y9DT0, Y9DT1, and Y9DT3;
- Trichloroethene in equipment blank Y9DS7; and
- Toluene in samples Y9DQ5, Y9DQ9, Y9DS4, and Y9DS5; equipment blank Y9DS7; and trip blank Y9DT3.

The analytes listed above were found in associated method blanks and storage blanks (see Table 1A). Results listed above are considered nondetected (U) according to the National Functional Guidelines. Methylene chloride results above CRQL and less than four times blank concentration are reported as nondetected at the reported concentration.

C. Results for the following analyte are qualified as estimated due to a large percent difference (%D) in the associated CCV and are flagged "UJ" in Table 1A.

- 1,2,3-Trichlorobenzene in sample Y9DP4, trip blanks Y9DT0 and Y9DT1, and method blank VBLK9E.

A %D of -31.4% was reported for 1,2,3-trichlorobenzene in the 04/05/14 22:23 CCV, which exceeds the $\pm$30.0% validation criterion for opening CCVs.

D. For QC samples Y9DP4MS and Y9DP4MSD, the MSD recovery for trichloroethene (130%) exceeds the QC limit of 71-120% and the relative percent differences (RPDs) for trichloroethene (26%) and toluene (16%) exceed the QC limits of 0-14% and 0-13%, respectively. Results reported may indicate poor laboratory technique or matrix effects which may interfere with analysis. The effect on data quality is not known.

Results for QC samples Y9DR0MS and Y9DR0MSD (in SDG Y9DQ5) were not reviewed.

E. Several samples (see table below) required reanalysis to obtain results within the calibration range for the indicated analytes. Results for these analytes are reported from the diluted analysis in Table 1A. Unless noted elsewhere, other results are reported from the undiluted analysis.

Sample	Dilution	Analytes
Y9DP4	400	cis-1,2-Dichloroethene and trichloroethene
Y9DQ5	1000	Trichloroethene
Y9DQ9	10	cis-1,2-Dichloroethene
Y9DS4	5.0	Trichloroethene
Y9DS5	5.0	Trichloroethene

TABLE 1B

DATA QUALIFIER DEFINITIONS FOR ORGANIC DATA REVIEW

The definitions of the following qualifiers are prepared according to the document, "USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review," June 2008.

U The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the adjusted Contract Required Quantitation Limit (CRQL) for sample and method.

J The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample (due either to the quality of the data generated because certain quality control criteria were not met, or the concentration of the analyte was below the CRQL).

NJ The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

UJ The analyte was not detected at a level greater than or equal to the adjusted CRQL. However, the reported adjusted CRQL is approximate and may be inaccurate or imprecise.

R The sample results are unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.

ESAT Modified Final Flag Results

VOA_Trace

Modified by ESAT (EPA Contract EP-W-13-029, TDF 10106031, ICF International).
Reviewer: Santiago Lee. DCN: 17081.

As directed by the Contracting Officer Representative (COR), a Tier 2 data review was performed for the samples other than Y9DQ5, Y9DQ9, and Y9DS5 and associated field QC samples (a tier 3 level review was performed for Y9DQ5, Y9DQ9, Y9DS4, Y9DS5, Y9DS7, and Y9DT3). The reviewer checked the SDG narrative for QC issues, confirmed EXES qualifiers, and added calibration qualifiers, as necessary.

SDG Narrative: The SDG narrative indicates that no QC issues were encountered during sample receiving, login, or analysis.

EXES Qualifiers (forms review only): The EXES qualifications are consistent with the National Functional Guidelines (NFG) except for the trace volatile matrix spike/matrix spike duplicate (MS/MSD) qualification. The relative percent differences (RPDs) between MS/MSD recoveries for 1,1-dichloroethene (62%), trichloroethene (100%), benzene (40%), toluene (16%), and chlorobenzene (24%) exceed QC limits but EXES did not qualify the associated results. ESAT added J-flags to the detected results for benzene, toluene, and chlorobenzene in MYDR0MS and Y9DR0MSD.

The percent relative standard deviation (%RSD) of 1,2,3-trichlorobenzene (33.7%) exceeds the 30.0% validation criterion in the 04/14/14 initial calibration. The NFG indicates the use of professional judgment for nondetected results. Since the relative response factor (RRF) for the CRQL standard (1.5090) is greater than the average RRF (1.1097), sensitivity at the CRQL is adequate; no qualification is needed.

Modified National Functional Guidelines Report #04

VOA_Trace

Modified by ESAT (EPA Contract EP-W-13-029, TDF 10106031, ICF International).
Reviewer: Santiago Lee. DCN: 17080.

As directed by the Contracting Officer Representative (COR), a Tier 2 data review was performed for the samples other than Y9DP4 and associated field QC samples (a tier 3 level review was performed for Y9DP4, Y9DS8, Y9DT0, and Y9DT1). The reviewer checked the SDG narrative for QC issues, confirmed EXES qualifiers, and added calibration qualifiers, as necessary.

SDG Narrative: The SDG narrative indicates that no QC issues were encountered during sample receiving, login, or analysis.

EXES Qualifiers (forms review only): The EXES qualifications are consistent with the National Functional Guidelines (NFG).

The percent relative standard deviations (%RSDs) for 1,2,4-trichlorobenzene and 1,2,3-trichlorobenzene exceed the 30.0% validation criterion in the 03/31/14 initial calibration. The NFG indicates the use of professional judgment for nondetected results. ESAT qualified the non-detected results as "UJ" for equipment blank Y9DS9, trip blank Y9DT2, and method blank VBLK8V because relative response factors (RRFs) for the CRQL standard are below the average RRFs, indicating low sensitivity at the CRQL.

Analytes	%RSD	RRF (0.5 ug/L)	Average RRF
1,2,4-Trichlorobenzene	34.2	0.5121	0.6652
1,2,3-Trichlorobenzene	35.0	0.2168	0.4204

Modified National Functional Guidelines Report #04

Data Validation Report - **Tier 2**

Case No.: 44217
SDG No.: Y9DS0 and Y9DQ5
Site: Southern Avenue Industrial Area
Laboratory: KAP Technologies, Inc. (KAP)
Reviewer: Santiago Lee, ESAT
Date: June 18, 2014

As directed by the Contracting Officer Representative (COR), a Tier 2 data review was performed. The review consisted of a Tier 3 validation of samples Y9DP4, Y9DQ5, Y9DQ9, and Y9DS5 and associated field QC samples.

I. SDG SUMMARY

For Sample Information and Laboratory QC, refer to EXES National Functional Guideline Report #06, *Analytical Sample Listing*.

Field QC

Field Blanks (FB):	Not Provided
Equipment Blanks (EB):	**Y9DS8** and **Y9DS7**
Background Samples (BG):	Not Provided
Field Duplicates (D3):	Y9DP1 and Y9DP2
Field Duplicates (D4):	**Y9DS4** and **Y9DS5**

Tables

1A:	Analytical Results with Qualifications
1B:	Data Qualifier Definitions for Organic Data Review

CLP PO Action

None.

Sampling Issues

1. The equipment blank Y9DS7 was collected on 03/27/14 but one of three bottles was received by the laboratory on 04/02/14 at 17°C; extraction for SVOC SIM analysis exceeded holding time (see Comment A).
2. For samples Y9DP2, Y9DP6, Y9DQ1, Y9DQ6, Y9DQ8, Y9DQ9, and Y9DS5 and equipment blanks Y9DS8 and Y9DS7, one bottle was broken when received. Two bottles for sample Y9DQ5 and three bottles for sample Y9DQ7 were broken when received. There was enough sample volume in the other bottles for analysis.
3. Signature and Date blocks for "Relinquished By" were not completed on page 3 of 3 for the chain of custody record No. 9-032514-093010-0004.

Additional Comments

Matrix spike/matrix spike duplicate (MS/MSD) analysis is not required.

Manual integration was performed on sample Y9DS4. The manual integration was reviewed and found to be in compliance with CLP Statement of Work (SOW) requirements.

All method requirements specified in the EPA Contract Laboratory Program (CLP) Organic Statement of Work (SOW), except as noted, have been met.

This report was prepared in accordance with the following documents:

- *Request for Quote (RFQ) for Modified Analysis*, Modification Reference Number 2103.4, March 19, 2014;
- *USEPA Contract Laboratory Program Statement of Work for Organics Analysis, Multi-Media, Multi-Concentration*, SOM01.1, May 2005;
- *Modifications Updating SOM01.1 to SOM01.2*, Amended April 11, 2007; and
- *USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review*, June 2008.

For technical definitions, refer to *Exhibit G (Glossary of Terms), USEPA Contract Laboratory Program Statement of Work for Organics Analysis, Multi-Media, Multi-Concentration*, SOM01.1, May 2005.

II. VALIDATION SUMMARY

The data were evaluated based on the following parameters:

	Parameter	Acceptable	Comment
1	Holding Time/Preservation	No	A
2	GC/MS Instrument Performance Check	Yes	
3	Initial Calibration	Yes	
4	Continuing Calibration Verification (CCV)	Yes	
5	Laboratory Blanks	Yes	
6	Field Blanks	Yes	
7	Deuterated Monitoring Compounds (DMCs)	No	B
8	Matrix Spike/Matrix Spike Duplicates (MS/MSDs)	N/A	
9	GPC Performance Check	N/A	
10	Internal Standards	Yes	
11	Compound Identification	Yes	
12	Compound Quantitation and Reported CRQL	Yes	C
13	System Performance	Yes	
14	Field Duplicate Sample Analysis	Yes	

N/A = Not Applicable

III. VALIDITY AND COMMENTS

A. The result for the following analyte is qualified as estimated due to holding time exceedance and inadequate sample preservation and is flagged "UJ" in Table 1A.

- 1,4-Dioxane in equipment blank Y9DS7.

The extraction of equipment blank Y9DS7 exceeds the 7-day technical holding time as shown below.

Sample	Date Collected	Date Extracted	No. of Days Exceeded
Y9DS7	03/27/14	04/06/14	3

Since the qualified result is nondetected, a false negative may exist. Additionally, the equipment blank Y9DS7 was not adequately maintained at the 4˚±2˚C temperature limit specified in the SOW; it was received at the laboratory at a temperature of 17˚C.

B. The result for the following analyte is qualified as estimated due to high DMC recoveries and is flagged "J" in Table 1A.

{1,4-Dioxane-d8}
- 1,4-Dioxane in sample Y9DQ5.

High DMC recoveries for sample Y9DQ5 are shown below.

Sample	DMC	% Recovery	QC Limit
Y9DQ5	1,4-Dioxane-d8	3464	40-150
Y9DQ5RX	1,4-Dioxane-d8	1074	40-150

The detected result for 1,4-dioxane in sample Y9DQ5 may be biased high. Sample Y9DQ5 was reextracted and reanalyzed and the reanalysis has similar result. The result from the original analysis is presented in Table 1A since the reanalysis result is similar.

C. Sample Y9PD4 was reanalyzed at a 10-fold dilution due to the concentration of 1,4-dioxane exceeding the calibration range. The result for 1,4-dioxane in sample Y9DP4 is reported from the diluted analysis in Table 1A.

1,4-Dioxane	0.50	UJ	A	0.50	U					0.50	U	

Com - Comments. Refer to the corresponding section in the Narrative for each letter.
D1, D2, etc. - Field Duplicate Pairs; FB - Field Blank, EB - Equipment Blank, BG - Background Sample.

TABLE 1B

DATA QUALIFIER DEFINITIONS FOR ORGANIC DATA REVIEW

The definitions of the following qualifiers are prepared according to the document, "USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review," June 2008.

U The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the adjusted Contract Required Quantitation Limit (CRQL) for sample and method.

J The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample (due either to the quality of the data generated because certain quality control criteria were not met, or the concentration of the analyte was below the CRQL).

NJ The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

UJ The analyte was not detected at a level greater than or equal to the adjusted CRQL. However, the reported adjusted CRQL is approximate and may be inaccurate or imprecise.

R The sample results are unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.

I. SDG SUMMARY

For Sample Information and Laboratory QC, refer to EXES National Functional Guideline Report #06, *Analytical Sample Listing*.

Field QC

Field Blanks (FB):	Not Provided
Equipment Blanks (EB):	Not Provided
Background Samples (BG):	Not Provided
Field Duplicates (D1):	Y9E94 (in SDG Y9EJ1) and Y9E95
Field Duplicates (D2):	Y9ED8 and Y9ED9
Field Duplicates (D3):	Y9EE2 and Y9EE3
Field Duplicates (D4):	Y9EG0 and Y9EG1

Tables

1A:	Analytical Results with Qualifications
1B:	Data Qualifier Definitions for Organic Data Review

CLP PO Action

None.

Sampling Issues

None.

Additional Comments

The documentation of the manual integration of samples Y9EE2, Y9EE3, and Y9EG1 and the run logs for 04/30/14 and 05/06/14 were missing from the data package. The laboratory submitted the missing information upon request, on 07/07/14.

Manual integration was performed on calibrations and samples. Manual integrations were reviewed and found to be in compliance with CLP Statement of Work requirements.

All method requirements specified in the EPA Contract Laboratory Program (CLP) Organic Statement of Work (SOW), except as noted, have been met.

This report was prepared in accordance with the following documents:

- *USEPA Contract Laboratory Program Statement of Work for Organics Analysis, Multi-Media, Multi-Concentration*, SOM01.1, May 2005;

- *Modifications Updating SOM01.1 to SOM01.2*, Amended April 11, 2007; and
- *USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review*, June 2008.

For technical definitions, refer to *Exhibit G (Glossary of Terms), USEPA Contract Laboratory Program Statement of Work for Organics Analysis, Multi-Media, Multi-Concentration*, SOM01.1, May 2005.

II. VALIDATION SUMMARY

The data were evaluated based on the following parameters:

	Parameter	Acceptable	Comment
1	Holding Time/Preservation	Yes	
2	Initial Calibration	Yes	
3	Continuing Calibration Verification (CCV)	Yes	
4	Laboratory Blanks	Yes	
5	Field Blanks	N/A	
6	Surrogate Spikes	No	B
7	Matrix Spike/Matrix Spike Duplicates (MS/MSDs)	Yes	
8	Laboratory Spike Samples (LCSs)	Yes	
9	GPC Performance Check	N/A	
10	Compound Identification	Yes	
11	GC/MS Confirmation	N/A	
12	Compound Quantitation and Reported CRQLs	No	A, C, E
13	System Performance	Yes	
14	Field Duplicate Sample Analysis	No	D

N/A = Not Applicable

III. VALIDITY AND COMMENTS

A. Results above the method detection limit (MDL) but below the contract required quantitation limit (CRQL) are estimated and flagged "J" in Table 1A. Results are considered qualitatively acceptable but quantitatively unreliable due to uncertainties in analytical precision near the quantitation limit.

B. Results for the following analytes are qualified as estimated due to low surrogate recoveries and are flagged "UJ" in Table 1A.

- All analytes in samples Y9E96, Y9E97, Y9E98, and Y9EC6.

Low surrogate recoveries are shown below.

Sample	DMC	% Recovery (Column 1 / 2)	QC Limit
Y9E96	Decachlorobiphenyl	25 / 23	30-150
Y9E97	Decachlorobiphenyl	23 / 18	30-150
Y9E98	Decachlorobiphenyl	26 / 24	30-150

Sample	DMC	% Recovery (Column 1 / 2)	QC Limit
Y9EC6	Decachlorobiphenyl	29 / 28	30-150

Since qualified results are nondetected, false negatives may exist. The samples listed above were not reanalyzed.

Decachlorobiphenyl (DCB) recoveries on column 2 for samples Y9EC7 (29%) and Y9ED9 (19%) are below QC limit. Sample results are not qualified because DCB recoveries on column 1 are within the QC limit and the target analytes are nondetects.

C. Results for the following analyte are qualified as estimated due to high percent difference (%D) between concentrations on columns 1 and 2 and are flagged "J" in Table 1A.

- Aroclor-1260 in samples Y9ED9, Y9EE0, and Y9EG1.

The %D for Aroclor-1260 between concentrations on columns 1 and 2 exceeds the QC limit of 25.0% in samples Y9ED9 (36.9%), Y9EE0 (25.5%), and Y9EG1 (59.5%). Results for Aroclor-1260 in these samples are considered quantitatively uncertain.

D. In the analysis of the field duplicate pairs, the following outlier (relative percent difference >35%) was reported.

Analyte	Y9ED8 (D2) Conc., µg/kg	Y9ED9 (D2) Conc., µg/kg	RPD
Aroclor-1260	7300	3000	84

The effect on data quality is not known.

E. Samples Y9ED8, Y9ED9, and Y9EE0 were reanalyzed at 50-, 20-, and 50-fold dilutions, respectively, due to concentrations of Aroclor-1260 exceeding the calibration range. Results for Aroclor-1260 in these samples are reported from the diluted analyses in Table 1A; results for other analytes are reported from the undiluted analyses. However, the presence of Aroclor-1260 at high concentrations could obscure the presence of other Aroclors at the reported CRQL.

TABLE 1B

DATA QUALIFIER DEFINITIONS FOR ORGANIC DATA REVIEW

The definitions of the following qualifiers are prepared according to the document, "USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review," June 2008.

U The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the adjusted Contract Required Quantitation Limit (CRQL) for sample and method.

J The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample (due either to the quality of the data generated because certain quality control criteria were not met, or the concentration of the analyte was below the CRQL).

NJ The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

UJ The analyte was not detected at a level greater than or equal to the adjusted CRQL. However, the reported adjusted CRQL is approximate and may be inaccurate or imprecise.

R The sample results are unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.

Date: July 9, 2014

I. SDG SUMMARY

For Sample Information and Laboratory QC, refer to EXES National Functional Guideline Report #06, *Analytical Sample Listing*.

Field QC

Field Blanks (FB):	Not Provided
Equipment Blanks (EB):	Not Provided
Trip Blanks (TB):	Not Provided
Background Samples (BG):	Not Provided
Field Duplicates (D1):	Y9E94 (in SDG Y9EJ1) and Y9E95
Field Duplicates (D2):	Y9ED8 and Y9ED9
Field Duplicates (D3):	Y9EE2 and Y9EE3
Field Duplicates (D4):	Y9EG0 and Y9EG1

Tables

1A:	Analytical Results with Qualifications
1B:	Data Qualifier Definitions for Organic Data Review

CLP PO Action

None.

Sampling Issues

None.

Additional Comments

For sample Y9ED9, areas for internal standards (ISs) chlorobenzene-d5 and 1,4-dichlorobenzene-d4 exceeded QC limits as shown below. Sample Y9ED9 was reanalyzed with similar results (areas exceeded QC limit for two ISs). Results from the original analysis are presented in Table 1A. The associated target analytes are nondetected in the sample and are not qualified, in accordance with the National Functional Guidelines.

Sample	Internal Standard	Area	QC Limit
Y9ED9	Chlorobenzene-d5	17,605,292	4,316,602-17,266,408
Y9ED9	1,4-Dichlorobenzene-d4	9,979,341	2,450,671-9,802,684
Y9ED9RE	Chlorobenzene-d5	18,049,258	4,316,602-17,266,408
Y9ED9RE	1,4-Difluorobenzene	20,026,412	5,005,543-20,022,174

The mass spectra for 1,2,3-trichloropropane from the low point initial calibration standard were missing from the data package. The laboratory submitted the missing mass spectra upon request, on 07/07/14.

Aside from laboratory artifacts (retention times of 2.2-2.7, 3.1, 3.9, 9.5, 10.5, 14.6, 18.0, and 24.3 minutes), tentatively identified compounds (TICs) were found in samples Y9E96, Y9E97, Y9ED8, and Y9EE0 (see attached Form 1Js).

Manual integration was performed on calibrations and samples. Manual integrations were reviewed and found to be in compliance with CLP Statement of Work requirements.

All method requirements specified in the EPA Contract Laboratory Program (CLP) Organic Statement of Work (SOW), except as noted, have been met.

This report was prepared in accordance with the following documents:

- *Request for Quote (RFQ) for Modified Analysis*, Modification Reference Number 2298.1, April 2, 2014;
- *USEPA Contract Laboratory Program Statement of Work for Organics Analysis, Multi-Media, Multi-Concentration*, SOM01.1, May 2005;
- *Modifications Updating SOM01.1 to SOM01.2*, Amended April 11, 2007; and
- *USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review*, June 2008.

For technical definitions, refer to *Exhibit G (Glossary of Terms), USEPA Contract Laboratory Program Statement of Work for Organics Analysis, Multi-Media, Multi-Concentration*, SOM01.1, May 2005.

II. VALIDATION SUMMARY

The data were evaluated based on the following parameters:

	Parameter	Acceptable	Comment
1	Holding Time/Preservation	Yes	
2	GC/MS Tune/GC Performance	Yes	
3	Initial Calibration	Yes	
4	Continuing Calibration Verification (CCV)	No	C
5	Laboratory Blanks	No	B
6	Field Blanks	N/A	
7	Deuterated Monitoring Compounds (DMCs)	No	D
8	Matrix Spike/Matrix Spike Duplicates (MS/MSDs)	Yes	
9	Internal Standards	Yes	
10	Compound Identification	Yes	
11	Compound Quantitation	Yes	A
12	System Performance	Yes	
13	Field Duplicate Sample Analysis	No	E

N/A = Not Applicable

III. VALIDITY AND COMMENTS

A. Results above the method detection limit (MDL) but below the contract required quantitation limit (CRQL) are estimated and flagged "J" in Table 1A. Results are considered qualitatively acceptable but quantitatively unreliable due to uncertainties in analytical precision near the quantitation limit.

B. The following results are qualified as nondetected due to method blank and storage blank contamination and are flagged "U" in Table 1A.

- Bromomethane and methylene chloride in all samples;
- Toluene in samples Y9E98, Y9EC6, Y9ED8, Y9ED9, Y9EE0, Y9EE1, and Y9EE2;
- 1,2,4-Trichlorobenzene in samples Y9EE0 and Y9EF9; and
- 1,2,3-Trichlorobenzene in sample Y9EE0.

Bromomethane and methylene chloride were found in all method blanks and storage blank VHBLK01; toluene was found in method blanks VBLKQP and VBLKQR; 1,2,4-trichlorobenzene and 1,2,3-trichlorobenzene were found in all method blanks (see Table 1A for concentrations). Results listed above are considered nondetected (U) according to the National Functional Guidelines. Methylene chloride results above CRQL and less than four times blank concentration are reported as nondetected at the reported concentration.

The result for toluene in sample Y9EG1 (1.2 ug/kg) is not qualified as nondetected because it is not found in associated method blank VBLKQT. The toluene result for Y9EG1 may be a false positive because it was found in method blanks VBLKQP (0.79 ug/kg) and VBLKQR (0.51 ug/kg).

C. Results for the following analyte are qualified as estimated due to a large percent difference (%D) in the associated CCV and are flagged "UJ" in Table 1A.

- 1,1-Dichloroethene in samples Y9E95, Y9E96, Y9E97, Y9EC7, and Y9ED9 and method blank VBLKQP.

A %D of +29.1% was reported for 1,1-dichloroethene in the 04/22/14 09:37 CCV, which exceeds the $\pm$25.0% validation criterion for opening CCVs.

D. Results for the following analytes are qualified as estimated due to low DMC recoveries and are flagged "UJ" in Table 1A.

{Chloroform-d}

- 1,1-Dichloroethane, bromochloromethane, chloroform, dibromochloromethane, and bromoform in samples Y9EC7 and Y9ED9.

Low DMC recoveries are shown below.

Sample	DMC	% Recovery	QC Limit
Y9EC7	Chloroform-d	71	72-123
Y9ED9	Chloroform-d	69	72-123

Since qualified results are nondetected, false negatives may exist. Samples Y9EC7 and Y9ED9 were not reanalyzed.

Recoveries for DMCs vinyl chloride-d3 in Y9ED0 (127%) and Y9ED8 (123%); chloroethane-d5 in Y9E95 (138%), Y9E96 (138%), Y9EE4 (132%), Y9EF9 (134%), and Y9EG1 (136%); and 1,2-dichloroethane-d4 in Y9EE3 (123%) and Y9EG0 (123%) exceed QC limits, indicating high bias in detected results. Sample results are not qualified because the associated target analytes are nondetects.

E. Data users should note that 1,2,4-trichlorobenzene and 1,2,3-trichlorobenzene were detected in sample Y9ED8 at concentrations of 48 ug/kg and 6.6 ug/kg, respectively, but were not detected in the field duplicate Y9ED9 (5.1U). The effect on data quality is not known.

TABLE 1B

DATA QUALIFIER DEFINITIONS FOR ORGANIC DATA REVIEW

The definitions of the following qualifiers are prepared according to the document, "USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review," June 2008.

U The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the adjusted Contract Required Quantitation Limit (CRQL) for sample and method.

J The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample (due either to the quality of the data generated because certain quality control criteria were not met, or the concentration of the analyte was below the CRQL).

NJ The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

UJ The analyte was not detected at a level greater than or equal to the adjusted CRQL. However, the reported adjusted CRQL is approximate and may be inaccurate or imprecise.

R The sample results are unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.

MEMORANDUM

TO: Karen Jurist, Remedial Project Manager
Site Cleanup Section 3, SFD-7-3

THROUGH: Joe Eidelberg, Chemist
Quality Assurance (QA) Program, MTS-3

Joseph Eidelberg
Digitally Signed

FROM: Kathy O'Brien, Data Review Task Manager
Region 9 Environmental Services Assistance Team (ESAT)

ESAT Contract No.: EP-W-13-029
Technical Direction Form No.: 10106032 (Revised)

DATE: June 26, 2014

SUBJECT: Review of Analytical Data, Tier 3

Attached are comments resulting from ESAT Region 9 review of the following analytical data:

Site:	Southern Avenue Industrial Area
Site Account No.:	09 WS QB 00
CERCLIS ID No.:	CAN000905902
Case No.:	44248
SDG No.:	MY9E95
Laboratory:	Chemtech Consulting Group (CHEM)
Analysis:	CLP Metals by ICP-AES and Mercury
Samples:	20 Soil Samples
Collection Date:	April 16, 2014
Reviewer:	Dina Bailey, ESAT

If there are any questions, please contact Joe Eidelberg (QA Program/EPA) at (415) 972-3809.

Data Validation Report – Tier 3

Case No.: 44248
SDG No.: MY9E95
Site: Southern Avenue Industrial Area
Laboratory: Chemtech Consulting Group (CHEM)
Reviewer: Dina Bailey, ESAT
Date: June 26, 2014

I. SDG SUMMARY

For Sample Information and Laboratory QC, refer to EXES National Functional Guideline Report #04, *Analytical Sample Listing*.

Field QC

Field Blanks (FB):	None Provided
Equipment Blanks (EB):	None Provided
Background Samples (BG):	None Provided
Field Duplicates (D1):	MY9E94 (in SDG MY9EJ1) and MY9E95
Field Duplicates (D2):	MY9ED8 and MY9ED9
Field Duplicates (D3):	MY9EE2 and MY9EE3
Field Duplicates (D4):	MY9EG0 and MY9EG1

Tables

1A:	Analytical Results with Qualifications
1B:	Data Qualifier Definitions for Inorganic Data Review

CLP PO Action

None.

Sampling Issues

None.

Additional Comments

All samples in SDG MY9E95 were analyzed for CLP metals. Aluminum, antimony, arsenic, barium, beryllium, cadmium, calcium, chromium, cobalt, copper, iron, lead, magnesium, manganese, nickel, potassium, selenium, silver, sodium, thallium, vanadium, and zinc were analyzed by Inductively Coupled Plasma-Atomic Emission Spectroscopy (ICP-AES). Mercury was analyzed by Cold Vapor Atomic Absorption (CVAA).

This report was prepared in accordance with the following documents:
- *USEPA Contract Laboratory Program Statement of Work for Inorganic Superfund Methods (Multi-Media, Multi-Concentration)* ISM01.2, January 2010;
- *Modifications Updating ISM01.2 to ISM01.3*; and
- *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Data Review*, January 2010.

For technical definitions, refer to *Exhibit G (Glossary of Terms), USEPA Contract Laboratory Program Statement of Work for Inorganic Superfund Methods (Multi-Media, Multi-Concentration)* ISM01.3.

II. VALIDATION SUMMARY

The data were evaluated based on the following parameters:

	Parameter	Acceptable	Comment
1.	Data Completeness	Yes	
2.	Preservation and Holding Times	Yes	
3.	Calibration	Yes	
	a. Initial	Yes	
	b. Initial and Continuing Calibration Verification	Yes	
	c. ICP-MS Tuning Analysis	N/A	
4.	Blanks	Yes	B
5.	ICP Interference Check Sample (ICS)	Yes	
6.	Laboratory Control Sample (LCS)	Yes	
7.	Duplicate Sample Analysis	Yes	
8.	Spike Sample Analysis	No	C
9.	ICP Serial Dilution	Yes	
10.	ICP-MS Internal Standards	N/A	
11.	Field Duplicate Sample Analysis	No	D
12.	Sample Quantitation	Yes	A
13.	Overall Assessment	Yes	

N/A – Not Applicable

III. VALIDITY AND COMMENTS

A. Results above the method detection limit (MDL) but below the contract required quantitation limit (CRQL) are estimated and flagged "J" in Table 1A. The results are considered qualitatively acceptable but quantitatively unreliable due to uncertainties in analytical precision near the quantitation limit.

B. The following results are qualified as non-detected (U) in Table 1A due to low level continuing calibration blank (CCB) contamination.

- Antimony in samples MY9E95 through MY9E98, MY9EC8, MY9EC9, MY9ED0, MY9ED1, and in preparation blank PBS01;
- Silver in samples MY9EE1 through MY9EE4, MY9EF9, and MY9EG1; and
- Sodium in samples MY9EE0, MY9EE1, MY9EF9, MY9EG0, and MY9EG1.

Analyte amounts greater than the MDL but less than the CRQL were found in the following blanks at the concentrations listed below.

Analyte	Blank	Concentration, µg/L
Antimony	CCB20/CCB21	2.723/3.989
Silver	CCB24	0.625
Sodium	CCB23	306

Sample results that are greater than or equal to the MDL but less than or equal to the CRQL are reported as non-detected (U) at the respective CRQL.

C. The following results are estimated and flagged “J”, “J+” or “UJ” in Table 1A because matrix spike recoveries are outside method QC limit.

- Antimony, lead, and thallium in all samples.

Matrix spike recoveries for antimony, lead, and thallium in QC sample MY9E98S do not meet the 75-125% criterion for accuracy as listed below.

Analyte	% Recovery
Antimony	67
Lead	128
Thallium	32

The results for antimony and thallium in all samples are considered quantitatively uncertain. The detected results for lead in all samples are considered quantitatively uncertain and may be biased high.

The following post-digestion spike recoveries were reported for antimony, lead, and thallium in QC sample MY9E98A.

Analyte	Post-Digestion Spike, % Recovery
Antimony	101
Lead	130
Thallium	127

Since both the post- and pre-digestion spikes for lead and thallium do not meet the QC criteria, matrix effects may be present in the sample digestate which impact the analyte signal during analysis.

Since the antimony post-digestion spike recovery is acceptable, the unacceptable pre-digestion spike recovery may indicate poor laboratory technique or matrix effects which may interfere with the analysis.

D. Results for the following field duplicate pairs do not meet the ±35% relative percent difference (RPD) criterion for precision as shown below.

MY9E94 and MY9E95 (D1)

Analyte	RPD
Chromium	46
Lead	52

MY9ED8 and MY9ED9 (D2)

Analyte	RPD
Calcium	51

MY9EG0 and MY9EG1 (D4)

Analyte	RPD
Chromium	75
Copper	47
Lead	108
Vanadium	37
Zinc	46

Results for the following field duplicate pair do not meet the absolute difference criterion of ≤2x CRQL for precision as listed below.

Analyte	MY9EG0 mg/kg	MY9EG1 mg/kg	Difference, mg/kg	CRQL, mg/kg
Cobalt	25.0	10.1	14.9	5.0

The effect on data quality is not known.

TABLE 1B

DATA QUALIFIER DEFINITIONS FOR INORGANIC DATA REVIEW

The definitions of the following qualifiers are prepared in accordance with the document *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Data Review*, January 2010.

U	The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
R	The data are unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control (QC) criteria. The analyte may or may not be present in the sample.
UJ	The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

MEMORANDUM

TO: Karen Jurist, Remedial Project Manager
Site Cleanup Section 3, SFD-7-3

THROUGH: Joe Eidelberg, Chemist
Quality Assurance (QA) Program, MTS-3

Joseph Eidelberg
Digitally Signed

FROM: Kathy O'Brien, Data Review Task Manager
Region 9 Environmental Services Assistance Team (ESAT)

ESAT Contract No.: EP-W-13-029
Technical Direction Form No.: 10106032 (Revised)

DATE: July 16, 2014

SUBJECT: Review of Analytical Data, Tier 3

Attached are comments resulting from ESAT Region 9 review of the following analytical data:

Site:	Southern Avenue Industrial Area
Site Account No.:	09 WS QB 00
CERCLIS ID No.:	CAN000905902
Case No.:	44248
SDG No.:	Y9E95
Laboratory:	KAP Technologies, Inc. (KAP)
Analysis:	Semivolatiles
Samples:	20 Soil Samples
Collection Date:	April 16, 2014
Reviewer:	Santiago Lee, ESAT

If there are any questions, please contact Joe Eidelberg (QA Program/EPA) at (415) 972-3809.

Data Validation Report - **Tier 2**

Case No.: 44248
SDG No.: Y9E95
Site: Southern Avenue Industrial Area
Laboratory: KAP Technologies, Inc. (KAP)
Reviewer: Santiago Lee, ESAT
Date: July 16, 2014

I. SDG SUMMARY

For Sample Information and Laboratory QC, refer to EXES National Functional Guideline Report #06, *Analytical Sample Listing*.

Field QC

Field Blanks (FB):	Not Provided
Equipment Blanks (EB):	Not Provided
Background Samples (BG):	Not Provided
Field Duplicates (D1):	Y9E94 (in SDG Y9EJ1) and Y9E95
Field Duplicates (D2):	Y9ED8 and Y9ED9
Field Duplicates (D3):	Y9EE2 and Y9EE3
Field Duplicates (D4):	Y9EG0 and Y9EG1

Tables

1A:	Analytical Results with Qualifications
1B:	Data Qualifier Definitions for Organic Data Review

CLP PO Action

None.

Sampling Issues

None.

Additional Comments

The recovery for deuterated monitoring compound (DMC) 4-chloroaniline-d4 in sample Y9E97 (198%) exceeds the QC limit of 1-145%, indicating high bias in detected results; sample results are not qualified because the associated target analytes are nondetects.

The following compounds were incorrectly reported as nondetects (i.e., false negatives):

- Phenanthrene, di-n-butylphthalate, benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, and indeno(1,2,3-cd)pyrene for sample Y9EC6;
- Di-n-butylphthalate, bis(2-ethylhexyl)phthalate, benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(a)pyrene, indeno(1,2,3-cd)pyrene, dibenzo(a,h)anthracene, and benzo(g,h,i)perylene for sample Y9EC8; and
- Diethylphthalate, di-n-butylphthalate, fluoranthene, pyrene, benzo(a)anthracene, chrysene, and bis(2-ethylhexyl)phthalate for sample Y9EF9.

The laboratory submitted revised data (Form Is, quantitation reports, and chromatograms) and mass spectra upon request, on 07/07/14 (see Table 1A for concentrations).

The preparation log for solution 453.52.01 was missing from the data package. The laboratory submitted the missing preparation log upon request, on 07/07/14.

Aside from a laboratory artifact (retention time of 10.1 minutes), tentatively identified compounds (TICs) were found in samples Y9E95 through Y9E98, Y9EC6, Y9EC7, Y9EC9 through Y9ED1, Y8ED8, Y9ED9, Y9EE2 through Y9EE4, Y9EF9, and Y9EG1 (see attached Form 1Ks).

Manual integration was performed on calibrations and samples. Manual integrations were reviewed and found to be in compliance with CLP Statement of Work requirements.

All method requirements specified in the EPA Contract Laboratory Program (CLP) Organic Statement of Work (SOW), except as noted, have been met.

This report was prepared in accordance with the following documents:

- *USEPA Contract Laboratory Program Statement of Work for Organics Analysis, Multi-Media, Multi-Concentration*, SOM01.1, May 2005;
- *Modifications Updating SOM01.1 to SOM01.2*, Amended April 11, 2007; and
- *USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review*, June 2008.

For technical definitions, refer to *Exhibit G (Glossary of Terms), USEPA Contract Laboratory Program Statement of Work for Organics Analysis, Multi-Media, Multi-Concentration*, SOM01.1, May 2005.

II. VALIDATION SUMMARY

The data were evaluated based on the following parameters:

	Parameter	Acceptable	Comment
1	Holding Time/Preservation	Yes	
2	GC/MS Tune/GC Performance	Yes	
3	Initial Calibration	Yes	
4	Continuing Calibration Verification (CCV)	No	B
5	Laboratory Blanks	Yes	
6	Field Blanks	N/A	
7	Deuterated Monitoring Compounds (DMCs)	Yes	
8	Matrix Spike/Matrix Spike Duplicates (MS/MSDs)	No	C
9	GPC Performance Check	N/A	
10	Internal Standards	Yes	
11	Compound Identification	Yes	
12	Compound Quantitation and Reported CRQLs	Yes	A
13	System Performance	Yes	
14	Field Duplicate Sample Analysis	Yes	

N/A = Not Applicable

III. VALIDITY AND COMMENTS

A. Results above the method detection limit (MDL) but below the contract required quantitation limit (CRQL) are estimated and flagged "J" in Table 1A. Results are considered qualitatively acceptable but quantitatively unreliable due to uncertainties in analytical precision near the quantitation limit.

B. The result for the following analyte is qualified as estimated due to a large percent difference (%D) in the associated CCV and is flagged "UJ" in Table 1A.

- Pentachlorophenol in method blank SBLK01.

A %D of -31.2% was reported for pentachlorophenol in the 04/29/14 17:04 CCV, which exceeds the $\pm$25.0% validation criterion for opening CCVs.

C. The MS recovery for pentachlorophenol (114%) in QC sample Y9E98MS exceeds the QC limit of 17-109. No adverse effect on data quality is expected since pentachlorophenol was not detected in the samples.

TABLE 1B

DATA QUALIFIER DEFINITIONS FOR ORGANIC DATA REVIEW

The definitions of the following qualifiers are prepared according to the document, "USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review," June 2008.

U The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the adjusted Contract Required Quantitation Limit (CRQL) for sample and method.

J The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample (due either to the quality of the data generated because certain quality control criteria were not met, or the concentration of the analyte was below the CRQL).

NJ The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

UJ The analyte was not detected at a level greater than or equal to the adjusted CRQL. However, the reported adjusted CRQL is approximate and may be inaccurate or imprecise.

R The sample results are unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.

Data Validation Report - **Tier 2**

Case No.: 44248
SDG No.: Y9EF8
Site: Southern Avenue Industrial Area
Laboratory: KAP Technologies, Inc. (KAP)
Analysis: CLP Aroclors
Reviewer: Santiago Lee, ESAT
Date: February 23, 2018

I. SDG SUMMARY

As instructed, ESAT has completed the review of aroclors data for sample Y9EL7. EXES Data Manager has not been updated with results of this review because the data has been archived and the data editing functions have been disabled.

For Sample Information and Laboratory Quality Control (QC), refer to EXES National Functional Guidelines (NFG) data validation reports *Analytical Sample Listing* and *Organic Analytic Sequence*. The data qualifier definitions, as described in pages 6 and 7 of the National Functional Guidelines, are attached to this report.

Field QC

Field Blanks (FB):	None.
Equipment Blanks (EB):	None.
Background Samples (BG):	None.
Field Duplicates:	Y9EL8 and Y9EL9.
Field Duplicates:	Y9EC5 and Y9EM3.

CLP PO Action

None.

Sampling Issues

None.

Additional Comments

The laboratory transposed the percent solids and percent moisture for sample Y9EL7 resulting in erroneous final results for all parameters. The error was corrected in the attached EDD, *380987_195062.SS44248.EPW11031.Y9EF8-ESAT_Edit. xls*; see entries in red font for specific changes.

All standards and spiking solutions were analyzed before the expiration date.

This report was prepared in accordance with the following documents:

- *USEPA Contract Laboratory Program Statement of Work for Multi-Media, Multi-Concentration, Organics Analytical Service for Superfund*, SOM01.2, August 2007 and
- *USEPA National Functional Guidelines for Superfund Organic Methods Data Review*, June 2008.

For technical definitions, refer to *Exhibit G (Glossary of Terms), USEPA Contract Laboratory Program Statement of Work for Multi-Media, Multi-Concentration, Organics Analytical Service for Superfund*, SOM01.2.

II. VALIDATION SUMMARY

The data were evaluated based on the following parameters:

	Parameter	Acceptable	Comment
1	Data Completeness	Yes	
2	Preservation and Holding Times	Yes	
3	Initial Calibration	Yes	
4	Continuing Calibration Verification (CCV)	Yes	
5	Laboratory Blank	Yes	
6	Field/Equipment Blanks	N/A	
7	Surrogate Spikes	Yes	
8	Matrix Spike/Matrix Spike Duplicates (MS/MSDs)	No	A
9	Laboratory Control Samples (LCSs)	Yes	
10	GPC Performance Check	N/A	
11	Target Compound Identification	Yes	
12	GC/MS Confirmation	N/A	
13	Target Compound Quantitation and Reported CRQLs	Yes	
14	Field Duplicate Sample Analysis	N/A	
15	System Performance	Yes	
16	Overall Assessment of Data	Yes	

N/A = Not Applicable.

III. VALIDITY AND COMMENTS

A. Recoveries for Aroclor-1016 on the RTX-CLP column in QC samples Y9EF8MS and Y9EF8MSD do not meet the criterion for accuracy specified in the SOW, as shown below.

Analyte	Y9EF8MS	Y9EF8MSD	QC Limit
Aroclors-1016	155	154	29-135

These results may indicate poor laboratory technique or matrix effects which may interfere with analysis. This uncertainty should be evaluated in the context of project data quality objectives to determine data usability.

I. SDG SUMMARY

For Sample Information and Laboratory Quality Control (QC), refer to EXES National Functional Guideline Report #06, *Analytical Sample Listing*.

Field QC

Field Blanks (FB):	Not Provided
Equipment Blanks (EB):	Y9M91
Travel Blanks (TB):	Y9M92
Background Samples (BG):	Not Provided
Field Duplicates (D1):	Not Provided

Tables

1A: Analytical Results with Qualifications
1B: Data Qualifier Definitions for Organic Data Review

CLP PO Action

Nondetected results for bromomethane in samples Y9M81, Y9M82, and Y9M86 and method blanks VBLKZV and VBLKAA are qualified as rejected (R) due to low relative response factors (<0.050) in the continuing calibration verifications (CCVs; see Comment A).

Sampling Issues

The detected result for acetone in sample Y9M86 is qualified as nondetected (U) due to equipment blank contamination (see Comment C).

Additional Comments

Sample Y9M84 was re-analyzed undiluted due to a missing closing CCV (see comment below); sample Y9M85, equipment blank Y9M91, and trip blank Y9M92 were re-analyzed undiluted because the associated CCVs failed QC criteria (see Comment A). Results from the re-analyses (sample ID ending in RE) are presented in Table 1A.

The laboratory indicates that the closing CCV for samples Y9M81, Y9M82, and Y9M84 and method blank VBLKZV was not analyzed due to an instrument failure. The reviewer examined the internal standard and DMC responses in the sequence to verify instrument stability. No trend or unusual variation was observed (i.e., the instrument was stable until

it stopped). The CCV VSTD005AA analyzed 21 hours from the opening CCV is considered to be the closing CCV for samples Y9M81 and Y9M82 and method blank VBLKZV.

The mass spectra for target analyte listed in Modification Reference Number (MRN) 2210.2 from the low point initial calibration standard were missing from the data package. The laboratory submitted the missing mass spectra upon request, on 10/23/14.

The preparation logbook page for solution 4H07028 was missing in the data package. The laboratory submitted the missing page upon request, on 10/23/14. All standards and spiking solutions associated with sample analysis were analyzed before the expiration date.

Aside from laboratory artifacts (retention times of 13.5/15.0 and 15.6 minutes), tentatively identified compounds (TICs) were found in samples Y9M83 and Y9M86 (see attached Form 1Js).

Manual integration was performed on calibrations and samples. Manual integrations were reviewed and found to be in compliance with CLP Statement of Work (SOW) requirements.

This report was prepared in accordance with the following documents:

- *Request for Quote (RFQ) for Modified Analysis*, Modification Reference Number: 2210.2, August 20, 2014;
- *USEPA Contract Laboratory Program Statement of Work for Organics Analysis, Multi-Media, Multi-Concentration*, SOM01.1, May 2005;
- *Modifications Updating SOM01.1 to SOM01.2*, Amended April 11, 2007; and
- *USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review*, June 2008.

For technical definitions, refer to *Exhibit G (Glossary of Terms), USEPA Contract Laboratory Program Statement of Work for Organics Analysis, Multi-Media, Multi-Concentration*, SOM01.1, May 2005.

II. VALIDATION SUMMARY

The data were evaluated based on the following parameters:

	Parameter	Acceptable	Comment
1	Holding Time/Preservation	Yes	
2	GC/MS Tune/GC Performance	Yes	
3	Initial Calibration	Yes	
4	Continuing Calibration Verification (CCV)	No	A, D
5	Laboratory Blanks	No	C
6	Field Blanks	No	C
7	Deuterated Monitoring Compounds (DMCs)	No	E
8	Matrix Spike/Matrix Spike Duplicates (MS/MSDs)	Yes	
9	Internal Standards	Yes	

	Parameter	Acceptable	Comment
10	Compound Identification	Yes	
11	Compound Quantitation	Yes	B, F
12	System Performance	Yes	
13	Field Duplicate Sample Analysis	N/A	

N/A = Not Applicable.

III. VALIDITY AND COMMENTS

A. Nondetected results for the following analyte are qualified as rejected due to low relative response factors (RRFs) in associated CCVs and are flagged "R" in Table 1A.

- Bromomethane in samples Y9M81, Y9M82, and Y9M86 and method blanks VBLKZV and VBLKAA.

The RRFs of 0.047 and 0.027 were reported for bromomethane in 09/04/14 15:50 and 09/04/14 21:55 CCVs, respectively, which are less than the 0.050 validation criterion. Results listed above are considered unusable (R) according to the National Functional Guidelines. Samples Y9M81, Y9M82, and Y9M86 were not re-analyzed undiluted.

B. Results above the method detection limit (MDL) but below the contract required quantitation limit (CRQL) are estimated and flagged "J" in Table 1A. Results are considered qualitatively acceptable but quantitatively unreliable due to uncertainties in analytical precision near the quantitation limit.

C. The following results are qualified as nondetected due to method blank, storage blank, and equipment blank contamination and are flagged "U" in Table 1A.

- Acetone in sample Y9M86;
- Methylene chloride in sample Y9M92RE; and
- Toluene in samples Y9M83 and Y9M91RE.

Acetone was found in equipment blank Y9M91RE at 18 µg/L. Methylene chloride was found in method blank VBLKAA and storage blank VHBLKYL; toluene was found in method blanks VBLKAA, VBLKAI, VBLKAK, and VBLKFR and storage blank VHBLKYL (see Table 1A for concentrations). Results listed above are considered nondetected (U) according to the National Functional Guidelines.

D. Results for the following analyte are qualified as estimated due to large percent differences (%Ds) in associated CCVs and are flagged "UJ" in Table 1A.

- Bromomethane in samples Y9M84RE and Y9M85RE, equipment blank Y9M91RE, travel blank Y9M92RE, method blanks VBLKAK and VBLKFR, and storage blank VHBLKYL.

The %Ds of -36.0% and +39.5% were reported in 09/04/14 15:50 and 09/10/14 14:41 CCVs, respectively, which exceed the ±30.0% validation criterion for opening CCVs. The %Ds of -62.5% and -66.2% were reported in 09/04/14 21:55 and 09/06/14 05:14 CCVs, respectively, which exceed the ±50.0% validation criterion for closing CCVs.

E. Results for the following analytes are qualified as estimated due to high DMC recoveries and are flagged "J" in Table 1A.

{1,1-Dichloroethene-d2}
- 1,1-Dichloroethene in sample Y9M83.

{Chloroform-d}
- 1,1-Dichloroethane in sample Y9M83.

High DMC recoveries are shown below.

Sample	DMC	% Recovery	QC Limit
Y9M83	Chloroethane-d5	143	71-131
Y9M83	1,1-Dichloroethene-d2	107	55-104
Y9M83	Chloroform-d	122	78-121

Qualified results may be biased high. For DMC recoveries that exceed QC limits, only detected results for associated analytes are qualified.

F. Several samples (see table below) required dilution to obtain results within the calibration range for the indicated analytes. Results for these analytes are reported from the diluted analyses in Table 1A; other results are reported from the undiluted analyses.

Sample	Dilution	Analyte
Y9M81	83.3	trans-1,2-Dichloroethene cis-1,2-Dichloroethene
Y9M82	500	trans-1,2-Dichloroethene cis-1,2-Dichloroethene Trichloroethene
Y9M83	31.3	cis-1,2-Dichloroethene trans-1,2-Dichloroethene

TABLE 1B

DATA QUALIFIER DEFINITIONS FOR ORGANIC DATA REVIEW

The definitions of the following qualifiers are prepared according to the document, "USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review," June 2008.

U The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the adjusted Contract Required Quantitation Limit (CRQL) for sample and method.

J The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample (due either to the quality of the data generated because certain quality control criteria were not met, or the concentration of the analyte was below the CRQL).

NJ The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

UJ The analyte was not detected at a level greater than or equal to the adjusted CRQL. However, the reported adjusted CRQL is approximate and may be inaccurate or imprecise.

R The sample results are unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.

MEMORANDUM

TO: Karen Jurist, Remedial Project Manager
Site Cleanup Section 3, SFD-7-3
USEPA Region 9

THROUGH: Joe Eidelberg, Chemist
Quality Assurance (QA) Program, MTS-3
USEPA Region 9

Joseph Eidelberg
Digitally Signed

FROM: Kathy O'Brien, Data Review Task Manager
Environmental Services Assistance Team (ESAT) Region 9
ICF International

ESAT Contract No.: EP-W-13-029
Technical Direction Form No.: 10106058

DATE: October 28, 2014

SUBJECT: Review of Analytical Data, Tier 3

Attached are comments resulting from ESAT Region 9 review of the following analytical data:

Site:	Southern Avenue Industrial Area
Site Account No.:	09 WS QB 00
Case No.:	44632
SDG No.:	Y9M81
Laboratory:	CompuChem (LIBRTY)
Analysis:	1,4-Dioxane by Semivolatile Selective Ion Monitoring (SIM)
Samples:	7 Water Samples
Collection Date:	August 27, 2014
Reviewer:	Anna Pajarillo, ESAT

If there are any questions, please contact Joe Eidelberg (QA Program/EPA) at (415) 972-3809.

Data Validation Report - Tier 3

Case No.: 44632
SDG No.: Y9M81
Site: Southern Avenue Industrial Area
Laboratory: CompuChem (LIBRTY)
Analysis: 1,4-Dioxane by Semivolatile Selective Ion Monitoring (SIM)
Reviewer: Anna Pajarillo, ESAT
Date: October 28, 2014

I. SDG SUMMARY

For Sample Information and Laboratory Quality Control (QC), refer to EXES National Functional Guideline Report #06, *Analytical Sample Listing*.

Field QC

Field Blanks (FB):	Not Provided
Equipment Blanks (EB):	Y9M91
Travel Blanks (TB):	Not Provided
Background Samples (BG):	Not Provided
Field Duplicates (D1):	Not Provided

Tables

1A:	Analytical Results with Qualifications
1B:	Data Qualifier Definitions for Organic Data Review

CLP PO Action

None.

Sampling Issues

None.

Additional Comments

Matrix spike/matrix spike duplicate (MS/MSD) analysis was not required.

Manual integration was performed on the surrogate 1,4-dioxane-d8 for sample Y9M82. The manual integration was reviewed and found to be in compliance with CLP Statement of Work (SOW) requirements.

This report was prepared in accordance with the following documents:

- *Request for Quote (RFQ) for Modified Analysis*, Modification Reference Number: 2103.5, August 20, 2014;
- *USEPA Contract Laboratory Program Statement of Work for Organics Analysis, Multi-Media, Multi-Concentration*, SOM01.1, May 2005;
- *Modifications Updating SOM01.1 to SOM01.2*, Amended April 11, 2007; and

- *USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review*, June 2008.

For technical definitions, refer to *Exhibit G (Glossary of Terms), USEPA Contract Laboratory Program Statement of Work for Organics Analysis, Multi-Media, Multi-Concentration*, SOM01.1, May 2005.

II. VALIDATION SUMMARY

The data were evaluated based on the following parameters:

	Parameter	Acceptable	Comment
1	Holding Time/Preservation	Yes	
2	GC/MS Tune/GC Performance	N/A	
3	Initial Calibration	Yes	
4	Continuing Calibration Verification (CCV)	Yes	
5	Laboratory Blanks	Yes	
6	Field Blanks	Yes	
7	Deuterated Monitoring Compounds (DMCs)	Yes	
8	Matrix Spike/Matrix Spike Duplicates (MS/MSDs)	N/A	
9	GPC Performance Check	N/A	
10	Internal Standards	Yes	
11	Compound Identification	Yes	
12	Compound Quantitation	Yes	A, B
13	System Performance	Yes	
14	Field Duplicate Sample Analysis	N/A	

N/A = Not Applicable

III. VALIDITY AND COMMENTS

A. Results above the method detection limit (MDL) but below the contract required quantitation limit (CRQL) are estimated and flagged "J" in Table 1A. Results are considered qualitatively acceptable but quantitatively unreliable due to uncertainties in analytical precision near the quantitation limit.

B. The extract for sample Y9M82 was reanalyzed at a 5-fold dilution due to the concentration of 1,4-dioxane exceeding the calibration range. The result from the diluted analysis is reported in Table 1A.

TABLE 1B

DATA QUALIFIER DEFINITIONS FOR ORGANIC DATA REVIEW

The definitions of the following qualifiers are prepared according to the document, "USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review," June 2008.

U The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the adjusted Contract Required Quantitation Limit (CRQL) for sample and method.

J The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample (due either to the quality of the data generated because certain quality control criteria were not met, or the concentration of the analyte was below the CRQL).

NJ The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

UJ The analyte was not detected at a level greater than or equal to the adjusted CRQL. However, the reported adjusted CRQL is approximate and may be inaccurate or imprecise.

R The sample results are unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.

PUMP TEST AND MODELING TECHNICAL MEMORANDUM

ATTACHMENT 4

Aquifer Pumping Test and Development and Results of Groundwater Flow and Fate-and-Transport Model

URS

TECHNICAL MEMORANDUM

TO: Don Gruber, Project Manager, ITSI

FROM: Eddy Teasdale, PG

DATE: December 16, 2009

SUBECT: **Development and Results of Groundwater Flow and Fate-and-Transport Model for the Cooper Drum Superfund Site, South Gate, California**

I. INTRODUCTION

This technical memorandum describes the numerical groundwater model developed for the Cooper Drum Superfund Project (Site) in South Gate, California The model uses particle-tracking simulations to predict capture zones of the proposed extraction system. The model also includes a fate-and-transport component that can be used to predict migration of chemicals of concern (COCs) in groundwater at the Site.

II. HYDROGEOLOGIC CONCEPTUAL MODEL

The conceptual model serves as a basis for the numerical model. The conceptual model summarized here is based on information in existing Site documents and discussions with the long-time Project Manager. Input to the numerical model included hydraulic conductivity, groundwater recharge, and chemical properties of COCs. Groundwater model boundaries are based on real world conditions. Input parameters may have been modified during model calibration, but the modifications were restricted to reasonable real world ranges.

Site-Specific Geology

The local geology and hydrogeology is briefly described below. A more complete description of the regional and local geology and hydrogeology can be found in the *Remedial Design Technical Memorandum Field Sampling Results, and Monitoring Well Installation and Groundwater Sampling Results, Addendum Number 4* (Innovative Technical Solutions Inc. [ITSI], 2010), which is based in part on the *Geohydrology, Geochemistry, and Ground-Water Simulation-Optimization of the Central and West Coast Basin, Los Angeles, County California* (United States Geological Survey [USGS], 2003).

The Site is located in the West Coast Basin of the Los Angeles Coastal Plain and extends from Santa Monica Bay east to the Newport-Inglewood uplift, and from the Ballona Escarpment on the north to Palos Verdes and San Pedro Bay to the south. The Site is underlain by approximately 1,500 feet of fresh water-bearing strata consisting of (from youngest to oldest) the Older Dune Sands, the upper Lakewood Formation (including the semi-perched aquifer and the Bellflower aquitard), the lower Lakewood Formation (including the Gage aquifer), the San Pedro Formation (including the Silverado aquifer), and the Upper Pico Formation.

Stratigraphy is generally consistent across the Site. Interbedded silts, clays, and silty sands occur from the ground surface to approximately 60 feet below ground surface (bgs). These sediments are representative of the Bellflower aquiclude, which incorporates the perched aquifer system. The Bellflower aquiclude overlays the Gaspur aquifer, which extends to a depth of approximately 110 feet bgs. The Gaspur aquifer

then overlays the Exposition aquifer. Municipal groundwater production occurs from the Exposition aquifer (part of the Lakewood Formation).

Site-Specific Hydrogeology

Groundwater elevations beneath the Site occur at elevations of approximately 51 to 52 feet about mean seal level (msl). The semi-perched Bellflower aquiclude is underlain by silty sands of the Gaspur aquifer. The Gaspur aquifer has been furthered divided into shallow, intermediate, and lower aquifer for better representation of the volatile organic compounds (VOC) concentration.

On this basis, the groundwater beneath the Site has been separated into five zones: shallow perched, the shallow Gaspur, intermediate Gaspur, lower Gaspur, and Exposition. Groundwater within the semi-perched and Gaspur aquifers primarily flows to the south; but it also has a southwesterly component in the lower Gaspur aquifer, especially near the southern portion of Southern Avenue. A north to south flow direction is generally consistent with historical water levels measured at the Site as referenced in groundwater monitoring reports. Flow variations in this area may be or may have been influenced by several factors that include but are not limited to the natural topography, which would suggest that groundwater flow would be predominantly to the southwest, toward the ocean.

In general, VOCs and 1,4-dioxane (1,4-D) are in the shallow, intermediate, and lower intervals of the Gaspur aquifer.

Aquifer Parameters

Aquifer parameters initially input in the model were based on results from historical pilot study injection tests and historical and 2009 aquifer tests performed at the Site. Table 1 summarizes the hydraulic conductivities calculated in these aquifer tests, and Appendix A provides details about the 2009 aquifer test. Effective porosity was estimated at 0.3 based on the lithology. Values for total organic carbon (TOC) and bulk density were derived from soil samples collected during the Cooper Drum remedial investigation feasibility study (RI/FS) (URS, 2002). Total organic carbon ranged from 0.2 to 0.03 percent, and bulk density ranged from 91.02 pounds per cubic foot (lbs/ft^3) to 101.92 lbs/ft^3 (URS, 2002).

Table 1. Summary of Hydraulic Conductivity, Cooper Drum Site

Test Area	Aquifer Test Date	Hydraulic Conductivity (feet/day)
EW-3 (McCallum Avenue)	May 2009	32 to 57
EW-1 (Source Area)	April 1999	33 to 54
EW-2 (Source Area)	March 2001	26 to 47

Groundwater Elevations, Flow Directions, and Gradients

Information on locations of wells used to collect data for interpretation of groundwater elevation, flow direction, and gradient at the Site and well specifications are included in the *Remedial Design Technical Memorandum for Field Sampling Results, and Monitoring Well Installation and Groundwater Sampling*

Results, Addendum Number 4 (ITSI, 2010). Hydrographs of shallow zone wells show minor seasonal groundwater level fluctuations and larger multi-year fluctuations that may be related to regional pumping and recharge. Historical shallow zone groundwater elevations (from 1990 to present) range from approximately 51 to 56 feet msl. A comparison of water levels in well pairs indicates vertical gradients are generally less than a few tenths of a foot and may be either upward or downward in a given well pair. This relatively flat gradient is expected in a system with no significant layering and high permeability.

Contoured potentiometric surface maps of historical groundwater levels indicate a generally southward flow direction. The hydraulic gradient across the model area is approximately 0.001 based on May 2009 water level data (URS, 2009).

Groundwater Recharge

Because the Site is almost entirely covered with asphalt and concrete, limited recharge was assigned to the model. Irrigation and precipitation in small areas of grass and vegetation and other areas not covered by impermeable surfaces within the model domain may provide some recharge to groundwater in this area. Recharge rates were assigned to the model based on precipitation data collected by the Los Angeles Civic Center (LLC) rain gauging station, located in the Los Angeles River Basin of the South Coast Hydrologic Area, near Los Angeles, California. (California Data Exchange Center [CDEC], 2009). Rates of 1 percent (%) of the average daily precipitation (professional judgment based on asphalt coverage) were input to the model as groundwater recharge. There are no unlined rivers or streams near the Site or model domain.

Groundwater Pumping

No active groundwater pumping occurs on the Site; however, there are municipal supply wells completed within the Exposition aquifer. Several of these municipal wells are close to the Site. Based on recent aquifer test data (Appendix A), there does not appear to be a hydraulic connection between the Gasper and Exposition aquifers in the vicinity of the Site.

Contaminant Distribution

Trichloroethene (TCE), cis-1,2-dichloroethane (cis-1,2-DCE) and 1,4-D are the primary COCs in groundwater at the Site. Contoured isoconcentrations for these three contaminants using May 2009 data are included in the *Remedial Design Technical Memorandum for Field Sampling Results, and Monitoring Well Installation and Groundwater Sampling Results, Addendum Number 4* (URS, 2009).

III. GROUNDWATER FLOW AND FATE-AND-TRANSPORT MODEL DEVELOPMENT

The Site numerical model consists of two models: a groundwater flow model and a fate-and-transport model. The two are linked by an interface in the model processor. Depending on the modeling objectives, the groundwater flow model can be operated independently of the transport model; however, when transport simulation is needed, both the flow and the transport models are required.

Model Software

The groundwater flow and fate-and-transport models were developed using the Brigham Young University Environmental Modeling Research Laboratory (EMRL) Groundwater Modeling System (GMS), Version 6.5 (EMRL, 2008). GMS is a comprehensive graphical user interface (GUI) for performing groundwater simulations. GMS provides a graphical preprocessor/postprocessor interface to several groundwater modeling codes: MODFLOW, MODPATH, MT3DMS, RT3D, FEMWATER, SEEP2D, NUFT, and UTCHEM. The EMRL of Brigham Young University, in partnership with the WES, developed the GMS interface. The GMS was used to develop the Cooper Drum Site conceptual hydrogeological model and to convert it into groundwater flow and transport models. All modeling codes and geological software tools used during this modeling effort are summarized below.

EarthVision 7 Geological Model. EarthVision 7 is a three-dimensional (3-D) modeling tool commonly used in oil exploration. It was used for this effort to update the 3-D geological model that has been used to support the groundwater monitoring program at the Site. Use of this sophisticated 3-D modeling tool was the most accurate, efficient, and convenient method for developing the structure of the groundwater model for this Site.

MODFLOW Groundwater Flow Model. The computer code selected to model groundwater flow beneath the Site was MODFLOW, a 3-D, cell-centered, finite difference, saturated flow model developed by the USGS (McDonald and Harbaugh, 1988). GMS provides an interface to the updated version, MODFLOW 2000 (Hill et al., 2000). Based on the information available, the uncertainties in site-specific information, the hydrogeologic complexity at the Site, and the modeling objectives, MODFLOW was considered an appropriate groundwater flow code.

MODPATH Particle-Tracking Model. Particle-tracking simulations provide a convenient means of visualizing groundwater flow paths. This is particularly useful in evaluating capture zones around a pumping well. MODPATH was selected as the particle-tracking program for this effort. MODPATH is a 3-D particle-tracking program that enables reverse and forward tracking from sinks (wells) and sources, respectively. MODPATH was developed by the USGS (Pollock, 1994). GMS has updated the interface for MODPATH to a seamless module that couples with MODFLOW 2000. MODFLOW flow modeling results (direction and rates of groundwater movement) are among the inputs for MODPATH runs.

MT3DMS Groundwater Transport Model. Contaminant transport simulations were conducted using the MT3DMS groundwater contaminant transport model code (Zheng and Wang, 1999). MT3DMS is an improved version of the MT3D model developed in 1990 (Zheng, 1990). It has improved numerical solvers that make the model more stable and help prevent model-induced numerical oscillations. GMS provides a module that links MODFLOW groundwater flow information to MT3DMS. MT3DMS uses this modeling output to simulate contaminant transport using the MODFLOW simulated groundwater flow field.

Parameter Estimation System (PEST). PEST is a model-independent parameter optimizer (Doherty, 2002). It was selected to shorten the time and improve the groundwater model calibration process. The typical calibration process for groundwater flow or transport models is iterative. The model with a specific set of parameter inputs is started; then the model results are compared to calibration targets (e.g., groundwater elevations at specific locations). After the comparison, the model is revised, and the process

is repeated until the model output adequately simulates the calibration data set. GMS provides a module that links PEST with MODFLOW and MT3DMS to facilitate calibration.

Model Construction

The flow model simulates the perched sediments, the Bellflower aquitard, the shallow, intermediate, and lower Gaspur aquifer, and the regional Exposition aquifer. The model domain was defined to incorporate an area much larger than the Site to mitigate irregularities that occur along the model edges. The model grid consists of 196 rows and 122 columns, creating model cells ranging from 10 by 10 feet to 100 by 100 feet in area (Figure 1). The model was divided into six layers: two layers represent the shallow perched zone and the Bellflower aquiclude; three layers represent the shallow, intermediate, and lower Gaspur aquifer; and the bottom layer represents the Exposition aquifer. There is no lithologic basis for these divisions, but more layers allow greater discretization of well screen intervals, greater particle tracking resolution, and better representation of VOC concentration. The top of Layer 1 is ground surface. The tops of Layers 2, 3, 4, 5, and 6 were specified as 60, 40, 25, 0, and -20 feet msl, respectively. The bottom of Layer 5 is -20 feet msl, which corresponds to the top of the Exposition aquifer. The saturated aquifer thickness is approximately 150 feet for the entire model domain and approximately 60 feet for the Gaspur aquifer.

The spatial distributions of hydraulic conductivity values for the flow model were based on several factors, including Site geology, aquifer test results, literature review, and other groundwater models in the area. The hydraulic conductivity values were categorized into zones (polygons) in the conceptual model based on interpretation of the geologic data into a solid geology model. These hydraulic conductivity values were then mapped into the numerical groundwater model and adjusted later in the flow model calibration.

A 3-D geological model was produced to support visualization of the groundwater system at the Cooper Drum Site. This 3-D geological model was developed from lithologic data within the screen intervals of Site groundwater wells. Computer modeling of the geology was performed with a 3-D modeling software tool, EarthVision 7, following an interpretation of the lithologic information by a geologist. EarthVision 7 was used to develop 3-D correlations between the boreholes. The development was accomplished by interpolating numerically coded lithology onto a 3-D grid. The 3-D grid was then filled to produce a solid geologic model and fence diagrams. This method allows for rigorous analysis of the data and the geologic system through any location within the volume. In addition, EarthVision 7 contains a database of lithologic information, cone penetrometer testing data, and water levels with depth. This method saves time because fence diagrams and 3-D models can be viewed on a monitor from several oblique angles prior to printing.

The geologic model was directly imported into GMS. The geology was discretized into two separate, independent geological grids; a course grid with dimensions of 10 feet vertically by 500 feet laterally, and a refined grid with dimensions of 10 feet vertically by 50 feet laterally. The grids were interpolated to the MODFLOW 2000 grid. The refined grid was used to enhance the geology in the general area of the Site. The 10-foot-thick lithologic data were averaged over the total thickness for each MODFLOW 2000 layer. These layer-specific lithologic interpolations were verified by comparing boring logs and cross-sections of the area.

After the lithologic data were interpolated, individual hydraulic conductivity zones were digitized based on the interpolated lithology for each layer. The conductivity zones are refined within and around the Site because of the large amount of lithologic information available from the refined geologic grid. The hydraulic conductivity zones are larger and less variable farther from the Site, because the lithologic data density decreases.

Initial conductivity values were modified and refined during iterative PEST simulations to achieve a higher degree of calibration with measured water levels. Hydraulic conductivity values in PEST simulations were allowed to vary within a range of 10 to 200 feet per day. Hydraulic conductivity distributions estimated by PEST were then modified based on historical Site information, current contaminant plume distributions, and MODPATH particle-tracking simulations. Hydraulic conductivity values range from 0.1 to 200 feet per day; hydraulic conductivity distributions for the shallow, intermediate, and lower Gaspur aquifer (Layers 3, 4, and 5) are shown on Figure 2. Vertical anisotropy ratios (Kh/Kv) ranged from 0.1 to 10 in the Gaspur aquifer. Porosity in all layers was specified as 0.30.

Groundwater flow is essentially north to south; therefore, the boundaries were specified as general head boundaries (GHBs). GHBs were determined by extrapolating the contoured potentiometric surface across the model domain and incorporating these head values into the model boundaries. GHBs were assigned high conductance values (1,000 square feet per day [ft^2/day]) and essentially behave as specified heads. Assigned northern GHB heads range from approximately 48 to 56 feet msl; and assigned southern GHB heads range from approximately 46 to 50 feet msl. Initial flow model steady state simulations were based on May 2009 groundwater level data.

Flow Calibration

The flow model was calibrated to steady-state conditions and compared to the measured groundwater elevation data from May 2009. Once head errors at calibration target locations (existing monitoring wells) met predetermined criteria, the steady-state model was considered adequately calibrated.

An additional calibration technique using particle tracking was used. Simulated groundwater velocities were compared to measured velocities over time. Calibrated average model errors across the Site are listed in Table 2.

Table 2. Groundwater Flow Calibration Results, Cooper Drum Site

Error Type	Error	Calibration Criterion
Mean Error	0.26 feet	Not applicable
Mean Absolute Error	0.36 feet	Not applicable
Root Mean Squared Error	0.42 feet	± 1 foot
Model Error	6.5%	10%

This high degree of model calibration was probably due to the relative homogeneity and simplicity of the hydrogeologic system as well as the regularity of the potentiometric surface in this area. Simulated observed head data for the model is summarized on Figure 3.

Transport Model Setup

Based on the Site history and the historical analytical groundwater data, the contaminants modeled were TCE, cis-1,2-DCE, and 14D. These three contaminants were selected because of their relatively large plumes.

The simulated contaminant transport processes include advection, dispersion, and adsorption (retardation). Given the lack of geochemical data available during model construction, residual source mass, biodegradation, or other chemical transformations were not simulated. Future model updates could incorporate revised parameters as additional data are collected. The modeled processes are discussed hereafter.

Initial Transport Model Parameters

The transport model simulates the processes of advection, dispersion, and adsorption (retardation) based on the simulated groundwater flow conditions, the initial TCE, cis-1,2-DCE, and 14D concentration distributions, and the transport properties. The following subsections discuss specific parameters used in the transport model development.

Dispersion

Dispersion refers to the process whereby a dissolved contaminant will be spatially distributed longitudinally (along the direction of groundwater flow), transversely (perpendicular to groundwater flow), and vertically (downward or upward or both) because of mechanical mixing and chemical diffusion in the aquifer. These processes contribute to the development of the plume shapes and dimensions (the spatial concentration distributions of the dissolved contaminant mass in the aquifer). Selection of values for dispersivity (the parameter used here to represent dispersion) is a difficult process given the impracticability of measuring dispersion in the field; however, simple estimation techniques based on the length of the contaminant plumes are available.

A large number of field data compiled by Gelhar, Welty, and Rehfeldt (1992), presented in *A Critical Review of Data on Field-Scale Dispersion in Aquifers*, suggest that longitudinal dispersivity is a function of the travel distance and the aquifer type. For porous media and plume length scales on the order of a few hundred feet to a few thousand feet, the longitudinal dispersivity varies between 1% and 10% of the travel distance. Transverse and vertical dispersivity are often set to be 10% and 5% of the longitudinal dispersivity, respectively (Aziz et al., 2000; Domenico and Schwartz, 1997; ASTM, 1995). For this transport model, the longitudinal dispersivity was set to be 30 feet. After verification, the transverse and vertical dispersivity were set to be 10 percent and 0.1 percent of the longitudinal dispersivity, or 3.0 and 0.03 feet, respectively. The effective molecular diffusion coefficient was set to be 0.0008 ft^2/day, based on the literature values of molecular diffusion in water.

Retardation

Several geochemical reactions influencing the transport of contaminants result in the retardation of contaminant migration (dissolved contaminants moving slower than groundwater). The dominating reaction is adsorption of contaminants to the surface of soil particles. Adsorption can reduce the migration of dissolved contaminants moving through the groundwater by holding contaminant mass on the surface

of soil particles. The retardation factor is the ratio of the groundwater seepage velocity to the rate that organic chemicals migrate in the groundwater. The degree of retardation depends on aquifer and constituent properties.

The retardation factor (R_e) is often estimated from soil properties and chemical data using the following variables: bulk density (ρ_b), effective porosity (n), organic carbon-water partition coefficient (K_{oc}), and fraction of organic carbon in uncontaminated soil (f_{oc}). The following expression was used to determine the retardation factor (Wiedemeier et al., 1999):

$$\mathrm{Re} = 1 + \frac{K_d \rho_b}{n}$$

where:

K_d = is distribution coefficient and $K_d = f_{oc} \times K_{oc}$

Organic carbon-water partition coefficients were set to literature values of 126 liters per kilogram (L/kg) for TCE, 49 L/kg for cis-1,2-DCE, and 17 L/kg for 14D (PNL, 1989).

The ρ_b, n, and f_{oc} values in uncontaminated soil were determined based on Site-specific analytical data. Based on these values, the retardation factors were calculated by the MT3DMS model code using the retardation factor equation shown above.

Degradation

The model was developed based on the assumption that TCE, cis-1,2-DCE, and 14D are not undergoing significant biodegradation or chemical transformation. This assumption is conservative because it leads to higher estimated contaminant concentrations than the assumption that biodegradation or chemical transformations act to reduce contaminant mass.

Transport Verification

A fate-and-transport model is rarely calibrated using specific information about contaminant releases (e.g., masses of original releases, times of releases, etc.) because the factors are usually not known with adequate certainty. This information for the Site is not known. Consequently, transport model verification was conducted by simulating historical conditions and changes over time and comparing the simulated results to measured concentration data. Historical concentration data are included in the *Remedial Design Technical Memorandum for Field Sampling Results, and Monitoring Well Installation and Groundwater Sampling Results, Addendum Number 4* (URS, 2009). Transport model verifications were performed with TCE as the simulated contaminants. Although two treatability studies were completed in June 2006 that resulted in the reduction of TCE mass, this model validation approach was still considered an adequate method to use for verification.

Similar to flow calibration criteria, transport verification criteria, or the acceptable differences between model-predicted (computed) and observed concentrations (May 2009), were selected based on an empirical understanding of the potential errors in observed Site groundwater concentrations.

The simulation times for the verification runs were determined based on the availability of and the uncertainty associated with the historical groundwater concentration data. For the transport verification run, concentration data from 2004 were used as the initial concentration conditions. The verification simulation extended from 2004 through 2009. The transport for five years was simulated, and the simulated concentration plume shapes at the end of simulation period (2009) were compared to the sampled concentration data for 2009.

The observed concentrations in 2009 and the simulated concentration distributions in 2009 are provided on Figure 4. The simulated concentration distributions at the end of the simulation (2009) were compared with the concentrations observed in May 2009. The qualitative comparison indicates that, in general, the simulated concentration distributions matched the interpolated concentration distributions of sampled concentration data from 2009, verifying that contaminant transport could be simulated adequately.

IV. CAPTURE ZONE ANALYSIS AND PARTICLE TRACKING

After the steady-state flow model calibration was successfully completed, particle tracking was performed. Particles generated using MODPATH may be calculated to travel either forward (downgradient) through the model simulation or backward (upgradient from a specific point, such as an extraction well). Forward traveling particles provide information about the predicted route of groundwater over the model run. The particle starting locations are selected to predict groundwater migration from specific locations through time. Forward traveling particles that are captured in an extraction well might not, however, predict the full capture zone for that well. They only predict the travel route from the starting location of the particle. Backward traveling particles predict where groundwater has traveled to reach a specific location. Particles traveling backward from an extraction well would predict the extent of that well's capture zone. Use of forward and backward traveling particles, therefore, depends on the particular questions being asked in the modeling effort. Particles on the figures are shown as black squares initially (year 0) and then as arrows (year 0 + n years); lines and arrows indicate particle flow paths, and the distance between arrows represents a period of five years.

For this model, particles were set to begin upgradient of the Site and were expected to travel through the area of groundwater impacted by the Site COCs (TCE, cis-1,2-DCE, and 1,4-D).

Predictive Scenarios were conducted to evaluate groundwater capture within the Cooper Drum Site model. Figure 5 illustrates the predicted flow regime or initial conditions without the influence of extraction and/or injection wells (current condition). Figures 6 through 8 show the results of predictive scenarios for the model using recently installed Extraction Well Number 3 (EW-3) pumping at 15, 20, and 30 gallons per minute (gpm). The purpose of the pumping scenarios was to see how different pumping rates would influence the particle flow paths. Starting locations for the forward traveling particles were set along the perimeters of the target area. Backward traveling particles are not used for this analysis because the forward traveling particles (and their starting locations) are most relevant for evaluating target area capture. Particles on the figures are shown as black squares initially (year 0) and then as arrows (year 0 + n years); lines and arrows indicate particle flow paths, and the distance between arrows represents a period of five years.

Figure 6 illustrates that predictive capture would occur within the Site using one extraction well with a pumping rate of 15 gpm. Predicted travel times for particles beginning at the north end of the target zone to the extraction well ranges from approximately 15 to 20 years. All of the particle flow paths to the

southwest, southeast, and northeast, beginning outside of the target zone, remain outside of the area of predicted capture.

Figure 7 illustrates that predictive capture would occur within the Site using one extraction well with a pumping rate of 20 gpm. Predicted travel times for particles beginning at the north end of the target zone to the extraction well are approximately 15 years. Some of the particle flow paths to the southwest and northeast, beginning outside of the target zone, remain outside of the area of predicted capture.

Figure 8 illustrates that predictive capture would occur within the Site using one extraction well with a pumping rate of 30 gpm. Predicted travel times for particles beginning at the north end of the target zone to the extraction well are approximately 15 years. Particle flow paths to the northeast, beginning outside of the target zone, remain outside of the area of predicted capture; however, particle flow paths to the southwest and southeast are predicted to be captured. This capture zone encompasses an area larger than the Site and could influence off-site plume migration, specifically in the southeast area.

V. FATE-AND-TRANSPORT SIMULATIONS

The model predictions were carried out based on the calibrated 3-D transport model. Eleven fate-and-transport scenarios were chosen to be simulated. A brief description of each of those scenarios is presented in Table 3.

The total model simulation time was 50 years from 2009. All estimated times to cleanup summarized in Table 3 at 50 years should be considered the minimum time to reach cleanup standards. The model was used to predict the times required for the COC plumes to reach the applicable cleanup standards of 5 µg/L for TCE, 6 µg/L for cis-1,2-DCE, and 6.1 µg/L for 14D.

Table 3. Fate-and-Transport Model Simulations, Cooper Drum Site

Scenario	Description	Purpose
1	EW-3 pumping at 30 gpm	Assess time to cleanup source area using one well.
2	EW-3 (30 gpm), SEW-1 (25 gpm)	Assess time to cleanup source area using two wells.
3	EW-3 (30 gpm), SEW-1 (15 gpm)	Assess impact of reducing SEW-1 from 25 to 15 gpm.
4	EW-3 (30 gpm), EW-2 (8 gpm) and EW-4 (4 gpm). EW-2 and EW-4 screened across Shallow and Intermediate Gaspur Aquifer only.	Assess impact in source area by adding two additional wells.
5	EW-3 (30 gpm), SEW-1 (10 gpm), EW-2 (8 gpm), and EW-4 (4 gpm)	Assess impact on cleanup time by adding four wells to pumping array.
6	Same as Scenario 4, but all wells screened across entire Gaspur Aquifer.	Assess impact to cleanup time by increasing screen length.
7	Same as Scenario 5, but all wells screened across entire Gaspur Aquifer.	Assess impact to cleanup time by increasing screen length.

Table 3. (Continued)

Scenario	Description	Purpose
8	Same as Scenario 2, but added two injection (IW-1 and IW-2) wells (12.5 gpm per well) in source area.	Assess impact to cleanup time by adding two additional injection wells.
9	Same as Scenario 2, but reduced mass within treatment zone to 50 µg/L.	Assess impact of implementing ISCO mass removal (removing mass to 50 µg/L).
10	Same as Scenario 9, but reduced mass within treatment zone to applicable MCL.	Assess impact of implementing ISCO mass removal (removing mass to applicable MCL).
11	Added 350-foot bio-barrier across entire Gaspur Aquifer (down to Lower Gaspur) along Southern Avenue. Source reduced to 50 µg/L and EW3 pumping at 30 gpm.	Assess impact to cleanup times for entire plume by implementing a bio-barrier.

gpm = gallons per minute
ISCO = in situ chemical oxidation
MCL = maximum contaminant limit
µg/L = micrograms per liter

For these simulations, it was assumed that there was no further contaminant input into the groundwater flow system as of 2009, i.e., all modeled source boundary conditions were turned off in the model. While this is unlikely based on field observations, no information is available to improve this assumption. However, it is noted that concentrations at the suspected source areas around certain wells have been dropping, suggesting that contaminant input is gradually decreasing.

Figure 9 shows the model predictions for the time required to reach the cleanup standard for each chemical within the shallow, intermediate and lower Gaspur aquifer. It is important to note that for these predictions, it was assumed that all sources are inactive and each estimated time to cleanup should be considered as a best-case scenario and non-conservative. Table 4 summarizes the results of each of the fate and transport model scenarios. Figure 10 shows the location of downgradient extraction well (EW-3), source area extraction wells (EW-2, EW-4 and SEW-1), source area injection wells (IW-1 and IW-2) and the proposed bio-barrier (Scenario 11).

Table 4. Results of Fate-and-Transport Model Simulations, Cooper Drum Site

Scenario	Cleanup Times in Year TCE -Shallow/Intermediate/Lower Gaspur Aquifer cis-1,2-DCE - Shallow/Intermediate/Lower Gaspur Aquifer 14D- Shallow/Intermediate/Lower Gaspur Aquifer
1	TCE - 43/50/50 cis-1,2-DCE - 45/50/50 14D - 14/50/43
2	TCE - 12/50/47 cis-1,2-DCE - 23/50/47 14D - 5/36/18

Table 4. (Continued)

Scenario	Cleanup Times in Year TCE -Shallow/Intermediate/Lower Gaspur Aquifer cis-1,2-DCE - Shallow/Intermediate/Lower Gaspur Aquifer 14D- Shallow/Intermediate/Lower Gaspur Aquifer
3	TCE - 25/50/50 cis-1,2-DCE - 23/50/50 1,4-D - 7/47/24
4	TCE - 10/44/47 cis-1,2-DCE - 15/50/39 1,4-D - 5/37/18
5	TCE - 8/36/43 cis-1,2-DCE - 10/43/34 1,4-D - 4/22/17
6	TCE - 12/44/49 cis-1,2-DCE - 12/50/39 1,4-D - 11/27/21
7	TCE - 9/36/43 cis-1,2-DCE - 10/43/34 1,4-D - 4/22/17
8	TCE - 5/25/40 cis-1,2-DCE - 9/28/30 1,4-D - 3/13/15
9	TCE - 10/50/48 cis-1,2-DCE - 6/43/30 1,4-D - 5/32/23
10	TCE - 6/27/25 cis-1,2-DCE - 5/32/23 1,4-D - 4/21/10
11	TCE - 36/35/36 cis-1,2-DCE - 24/27/25 1,4-D - 15/17/12

cis-1,2-DCE = cis-1,2-dichloroethene
TCE = trichloroethene
1,4-D = 1,4-dioxane

VI. SUMMARY

The six-layer transient groundwater flow and transport models, developed using available Site-specific data, were calibrated to mimic 2009 groundwater elevations to within 10 percent.

Particle tracking, based on the flow model, was used to help predict the migration path of groundwater particles associated with contaminant plumes at the Site. Based on particle tracking capture zone analysis, EW-3 could be operated at less than 30 gpm and still provide adequate plume capture.

Eleven fate-and-transport scenarios were simulated to evaluate the impacts different remediation technologies would have on overall cleanup times. All transport model simulations assume no source mass is present at the site and that decay is not occurring at the site. The conclusions are as follows:

- Addition of source area extraction (SEW-1, EW-2 or EW-4) reduces cleanup times (Scenarios 2 through 10).
- Scenario 8 (two injection wells (IW-1 and IW-2) added near source area) appears to have a beneficial use in reducing cleanup times to 40 years.
- Scenario 10 reduced cleanup time to 25 years, but this assumed that all mass in the source area is reduced to the applicable maximum contaminant limit (MCL) by in situ chemical oxidation (ISCO), prior to groundwater extraction.
- Scenario 11 (bio-barrier) may reduce cleanup time by approximately 3-6 years.

VII. MODEL USE, LIMITATIONS, AND UNCERTAINTY

Data for edge boundary conditions interpolated over distance are sparse, leading to unquantifiable errors along the edges of the model. This error could be mitigated with additional groundwater elevation data farther from the site. With those data, the model domain could be enlarged so that residual errors around the edges of the model would have even less relevance to the areas of interest.

Particle-tracking calibration cannot account for retardation of chlorinated solvents, so the simulated groundwater velocities may be greater than actual plume migration velocities.

This groundwater flow model is a useful predictive tool that incorporates nearly all available data within the model domain. Numerical models can be powerful tools, if used appropriately, to assist in making management decisions for the former Cooper Drum groundwater cleanup program. This model can be used to help quantify the effectiveness of current cleanup efforts at the Site. Use of this model is subject to limitations; like any computer model, it has inherent uncertainty.

Groundwater models are simplifications of the natural environment and, therefore, have recognized limitations. Hence, some uncertainty exists in the ability of this model to predict groundwater flow. Effort was expended to minimize model uncertainty by using real world values as model input whenever available. Uncertainty of the model output reflects uncertainties in the conceptual model, the input parameters, and the ability of the mathematical model to simulate real world conditions adequately.

VIII. DISCLAIMER

The limited objective of this effort, the ongoing nature of the project, and the evolving knowledge of Site conditions and chemical effects on the environment and human health all must be considered when evaluating this memorandum because facts may become known that may make this document premature or inaccurate.

This memorandum was prepared by URS under the review of registered professionals. The conclusions and recommendations in this memorandum are based on URS' evaluation of the data. The interpretation of the data and the conclusions drawn were governed by URS' experience and professional judgment.
