

NPL Site Narrative for Celtor Chemical Works

CELTOR CHEMICAL WORKS Hoopa, California

Conditions at listing (December 1982): The Celtor Chemical Works Site covers about 2 acres in Hoopa, within the Hoopa Valley Indian Reservation in the forested mountains in Humboldt County in northern California. The Trinity River, which supports the only fisheries resources for the Hoopa Indians, flows through the center of the reservation and near the site. Land in the vicinity of Celtor is used for agriculture, residential areas, and industrial/commercial enterprises.

From 1957 until 1962, copper, zinc, and precious metals were recovered on-site from sulfide ore mined and trucked to Celtor from nearby Copper Bluff Mine. Significant levels of cadmium, lead, arsenic, mercury, zinc, and copper have been found at the site, which children on the reservation now use as a play area.

Status (July 1983): EPA is investigating the site further to gather the information needed to start a feasibility study, which will identify alternatives for remedial action.

For more information about the hazardous substances identified in this narrative summary, including general information regarding the effects of exposure to these substances on human health, please see the Agency for Toxic Substances and Disease Registry (ATSDR) ToxFAQs. ATSDR ToxFAQs can be found on the Internet at [ATSDR - ToxFAQs](http://www.atsdr.cdc.gov/toxfaq/index.asp) (<http://www.atsdr.cdc.gov/toxfaq/index.asp>) or by telephone at 1-888-42-ATSDR or 1-888-422-8737.
