

Trucks Will Resume Hauling Waste to Lower Burke Canyon Repository

Coeur d'Alene Basin Cleanup Project

June 2020

The Lower Burke Canyon Repository is ready for the 2020 work season. The repository is operated by the Coeur d'Alene Work Trust under the direction of the U.S. Environmental Protection Agency. Repositories are designed to reduce risks posed by metals like lead and arsenic. It's a priority to provide cities and counties with a well-managed facility that will take in mine waste year-round. Moving waste from several sites into one smaller, managed location helps control sources of contamination within the Silver Valley.

How much waste do we expect this season?

EPA and the Trust estimate about 1,750 truckloads of contaminated material will be hauled to LBCR. Waste will come from work on roads, the Institutional Controls Program, and possible other Basin projects. Each year, we make every effort to provide an accurate estimate. However, changes in project work may alter the number of trucks coming to the repository.

What are the haulers required to do?

The Trust, EPA, and Panhandle Health District (which runs the ICP) are committed to limiting impacts to the local community. The Trust and PHD will continue to monitor the haulers coming into the repository this season. Following are measures designed to reduce impacts from truck traffic.

1. Truckers are expected to comply with traffic rules, including speed limits. Speed notification signs are in use along the travel routes. Trucks using the repository use State Highway 4 (also known as Canyon Creek Road). This road has a speed limit of 35 mph in the lower section of Canyon Creek, and 45 mph through the LBCR access road. Speeds are set by the Idaho Transportation Department. The Shoshone County Sheriff serves this area. While EPA cannot reduce this speed limit or enforce against traffic violations, we will continue to inform ITD and the Sheriff's Office about any neighborhood complaints.
2. The haulers carrying contaminated material are required to cover their loads. Any truck that arrives at the repository is allowed to dump that load, but any hauler without a tarp is given a warning and is not allowed to return a second time without a tarp.
3. Haulers can bring waste to LBCR during normal hours of 7:00 am to 5:00 pm, Monday through Friday. ICP waste is sometimes delivered outside of these hours, using a gate access card provided by the ICP.
4. Trucks delivering waste during normal hours go through a decontamination process before going back on the road.
5. Trucks delivering waste through the ICP entrance are required to stay on the clean material cap. They are not decontaminated before leaving the site. The Trust's contractors wet down the waste area as needed to reduce dust.
6. Panhandle Health District conducts mandatory training for ICP contractors. This training is offered on a weekly basis. It includes information on the importance of obeying cover requirements, speed limits, and designated routes.

Health and Safety are Priorities

As we continue to adjust to the evolving COVID-19 situation, EPA is taking the necessary steps to ensure that decisions about ongoing cleanup activities at Superfund sites are made with the health and safety of communities, EPA staff, partners, and contractors as the priority. Therefore, decisions about continuing on-site activities will be made on a case-by-case basis.

We are working closely with our partners to evaluate options for continuing site work or securing sites, especially in areas where local health declarations are in effect due to COVID-19. The Trust prepared a Health and Safety Plan Addendum to ensure that the planned work is completed using social distancing and other measures to protect workers and stay in compliance with the State of Idaho COVID-19 Stay-Home Order.

A big "Thank You!" to everyone in the community for your cooperation and patience as we work to protect the health of people and the environment. Please contact us if you have questions or concerns.
