SETTING:

- Glynn County zoned the site’s two parcels for commercial uses.
- Land uses nearby are mostly commercial and residential. They include a shopping mall, stores, a school and restaurants.
- A car dealership is located north of the on-site monolith. The dealership has fenced and paved the top of the monolith and uses the area as a parking lot for its vehicles.
- Surrounding population: 0.5 miles, 1,388 people; 2.5 miles, 23,036 people; 4 miles, 39,452 people.

REMEDIAL STATUS:

- From 1948 to 1980, Hercules disposed of wastes on the northern end of the site.
- EPA added the site to the Superfund program’s National Priorities List (NPL) in 1984.
- The site’s remedy included removing contamination from residential yards, stabilizing contaminated soil and sludge in a monolith, capping the monolith with clean soil, and monitoring groundwater and surface water.
- Hercules worked with the Wildlife Habitat Council on a conservation certification for the southern pond area. The company installed wildlife cameras, basking logs and cover boards to attract insects and reptiles.
- Construction of the site’s remedy is complete. Regular groundwater monitoring and monolith maintenance are ongoing.
- EPA is working with parties on land and groundwater use restrictions to protect the cap and limit groundwater use.
