The Rose Hill Regional Landfill Superfund site covers 70 acres in a predominantly residential and agricultural area in South Kingstown, Washington County, Rhode Island. It includes the area where the town of South Kingstown operated a waste disposal facility from 1967 until 1983. EPA placed the site on the Superfund program's National Priorities List (NPL) in 1989 because of contaminated groundwater, surface water, soil, sediment, landfill gas and leachate that resulted from waste disposal operations.

construction was completed in 2008. In 2010, the municipalities installed an active landfill gas destruction system to eliminate migration

- 1967 - 1983** South Kingstown operated a waste disposal facility on site.
- 1983** South Kingstown built and began operating a solid waste transfer station on site.
- 1989** EPA placed the site on the NPL.
- 1999** EPA selected the final remedy for the site.
- 2008** Towns of South Kingstown and Narragansett completed construction of remedial components.
- 2015** South Kingstown Solar Consortium put out a request for proposals for potential solar facilities around the town, including the Rose Hill Regional Landfill site.
- 2017** Kearsarge Energy won the contract and began construction of the solar array on site.
- 2018** Kearsarge Energy completed construction of the solar array on site and began its operation.

Today, monitoring of surface water, landfill gas and groundwater continue, as well as operation and maintenance activities.

Land use restrictions are currently in place on the landfill and restrict excavation, remedy interference, installation of groundwater wells and use of site groundwater. The site is currently in use as a solid waste transfer station and active solar array. Since 1983, South Kingstown has operated a solid waste transfer station on site. Operations include unloading municipal waste from collection trucks and transferring it to vehicles that take it to the Johnston Landfill off site. In 2015, South Kingstown officials and residents formed the South Kingstown Solar Consortium and put out a request for proposals for potential solar facilities around the town, including the Rose Hill Regional Landfill site. Kearsarge Energy provided the most favorable proposal and began construction of the solar array in fall 2017.

Construction of the solar array finished in spring 2018. It occupies 20 acres of the site and has an estimated capacity of 4.7 megawatts of direct current. The solar array is in accordance with site land use restrictions and is on the landfill cap. It came at no cost to the municipalities and 25 percent of the power generated will be sold back to the municipalities. All municipal buildings in both towns, including the school districts, have access to power generated at the solar facility.
